FOX (HENRY) first lord Holland, an eminent statesman of the last century. He was the youngest son of sir Stephen Fox, and was born in 1705. Mr Fox received his education at Eton, and commenced his parliamentary career at the age of thirty. After filling in succession the offices of surveyor to the board of works, and commissioner of the treasury, he was appointed secretary at war in 1746, which situation he held nearly ten years. In 1756 he retired in favour of Mr Pitt, afterwards lord Chatham, but returned to office the following year as paymaster of the forces. Few ministers have been more severely attacked by their opponents, who did not hesitate to ascribe to him the most unbounded peculation, especially in his discharge of the duties of the last-mentioned office. In 1763 Mr Fox was called to the upper house by the title of baron Holland of Foxley. He died in 1774.—*Collins's Peerage.*

FOY (MAXIMILIAN SEBASTIAN) lieutenant-general of the armies of France, was born at Hamme in Picardy in 1775. He was admitted as a student in the military school of La Fère at the age of fifteen, and he entered as second lieutenant into the third regiment of artillery. In 1792 he made his first campaign under the command of Dumouriez; and by his bravery and good conduct he successively rose to be captain and chief of a squadron. He was appointed adjutant-general on the field of battle at Diersenoffen in 1800; and his future behaviour showed that he was worthy of the patronage which he experienced. When proceedings were pending against Moreau, a paper censuring his conduct was presented to Foy for his signature, which he refused to give, observing "that he was a soldier and not a judge." He also showed his independence of mind by giving a negative vote on the proposition for the

institution of the empire. He displayed his military talents to advantage in the campaigns in Italy, Germany, and Portugal. In 1809 he was made general of a brigade; and he was chosen by Marshal Massena as an envoy from the army under his command detained on the banks of the Tagus to his imperial master. Foy was sent back with the rank of general of a division; and he subsequently distinguished himself at the battle of Arapiles, or Salamanca (July 22, 1812), at the passage of the Douro, and on various other occasions. He joined Buonaparte on his return from Elba; and he was present at Waterloo, where he was wounded, but he remained at his post till the close of the engagement. In 1819 he was nominated inspector-general of infantry; and on the 11th of September the same year he was chosen a member of the chamber of deputies. He died November 28, 1825. A subscription has been subsequently made for erecting a monument to his memory, and providing for his family. Madame de Foy has published from her husband's MSS. "*Histoire de la Guerre de la Péninsule sous Napoléon, précédée d'un Tableau Politique et Militaire des Puissances Belligérantes*," 4 vols, 8vo.—*Foreign Review. Biog. Nouv. des Contemp.*

FRAMERY (NICHOLAS STEPHEN) a distinguished French musician and dramatist, born at Rouen in 1745, and died in 1810. He composed the music and poetry of a number of operas; published several critical tracts; wrote "Notice sur Joseph Haydn," 1810, 8vo; and translated into prose, in conjunction with Panckoucke, the *Jerusalem Delivered* of Tasso, and the *Orlando of Ariosto*; besides he conducted the *Journal de Musique* in 1770 and 1771, 8vo.—*Biog. Univ. Class.*

FRANCIA (FRANCESCO) a celebrated Bolognese artist, born about the middle of the fifteenth century. He was bred an engraver, to which profession he united the business of a goldsmith, but latterly devoted himself entirely to painting. Raphael d'Urbino held his pictures in great esteem, especially his representations of the Virgin Mary. Francia died in 1518.—*D'Argenville.*

FRANCIS (ANNE) an English poetess, who died in 1800. She published a translation in verse of the *Songs of Solomon*, London, 1781, 4to; "*The Obsequies of Demetrius Poliorcetes, a Poem*," 1785, 4to; "*Charlotte to Werter, a poetical Epistle*," 1787, 4to; and "*Miscellaneous Poems*," 1790, 8vo.—*Reuss. Biog. Univ. Class.*

FRANCK or FRANCKS (FRANCIS). There were two eminent Dutch painters of this name, father and son. The elder, known among connoisseurs by the name of Old Francks, was born in 1544, and died in 1616. He is celebrated for the beauty of his pieces, principally taken from Scripture history. His son, however, eclipsed the reputation of his father in his own line. There is a magnificent specimen of his talents at Antwerp, taken from the history of Solomon. The younger Francks died in 1642, at the age of sixty-two.—*D'Argenville.*

FRANCKENSTEIN (CHRISTIAN GOD-

F R A

PREY) was born in 1661, and practised at the Leipsic bar. His writings consist of a "Life of Christina, Queen of Sweden;" a "History of the Sixteenth and Seventeenth Centuries;" and a "Supplement to Puffendorf's Introduction to History." His death took place in 1717.—JAMES FRANCKENSTEIN, son to the preceding, is known as the author of a treatise on the laws and customs of the Jews in Germany, and of another entitled "De Collatione Bonorum." He died in 1733.—*Moreri*.

FRANK (PETER) a German physician, born at Rotalben, in the grand duchy of Baden, in 1745. He studied medicine and anatomy at Heidelberg, and afterwards became physician to the bishop of Spire. He then filled a chair in the university of Gottingen, and succeeded Tissot at Pavia. He was also nominated director-general of the hospitals of Lombardy, but he quitted Italy in 1795 to become clinical professor at Vienna. That city he also left to go to Russia as imperial archiater, but ill health obliged him to return to Vienna, and after refusing an invitation to France from Buonaparte, he died in 1821. The works of Professor Frank are "Système de Police Médicale," 11 vols, 8vo; "Choix d'Opuscules appartenant à la Médecine," 1785, 12 vols, 8vo; "Plan d'Ecole Clinique," Vienna, 1790, 8vo; and "De l'Art de Traiter les Maladies," Pisa, 1818, 9 vols, 8vo.—*Biog. Univ. Class.*

FRAUENHOFER (JOSEPH VON) doctor of philosophy, professor in the Royal Bavarian Academy, and knight of the Bavarian Civil Order, and of the Danish Order of Dannebrog. He was the son of a glazier at Straubing; and being destined for the same employment, his early education was neglected. In his eleventh year, being left an orphan, he was first placed by his guardian with a turner, whose work being too laborious for his strength, he was, in August 1799, apprenticed to Philip Weichselberger, court mirror maker and glass-cutter. In the second year of his apprenticeship, an accident happened to him, which proved the first occasion of his advancement. On the 21st of July that year, (1801,) the house in which Frauenhofer lodged, in Munich, fell down, and he was buried in the rubbish, from which, however, fortunately he was extricated alive. His remarkable preservation came to the knowledge of the king, Maximilian Joseph, who ordered that the utmost care should be taken for the recovery of the boy, concerning whose prospects and situation he made inquiries. He afterwards gave him eighteen ducats, and promised him his protection. Frauenhofer made a good use of this money; he constructed a glass-cutting machine, and on holidays made and ground optical glasses; and in spite of all difficulties he acquired a knowledge of the theory of optics and mathematics. He procured further information from the works of Kästner, Klugel, Priestley, and others, from which he found that a knowledge of pure mathematics would be necessary, and he there-

F R E

fore steadily applied himself to the acquisition of it. Besides these difficulties he had others to encounter, from the opposition of his master, and the neglect of other persons, notwithstanding which he persisted in his studies. At length he became independent of his master, having purchased the last half year of his apprenticeship. He now learnt to engrave on metal, without any assistance, and contrived a model of a press; but the occurrence of war, which filled the country with troops, interrupted his proceedings. Through that and other misfortunes, Frauenhofer was brought into great embarrassment, and found it difficult to procure the means of subsistence; yet he could not assume courage enough to make known his difficulties to the king. In these distressed circumstances, he returned to his old occupation of looking-glass making and glass-cutting, continuing the study of mathematics on holidays. At this time, through the recommendation of Usschneider, he was admitted into the Mathematical Mechanical Institute of Reichenbach, then under the superintendence of Professor Schiegg. Here Frauenhofer computed and ground optical glasses, from the new glass works at Benedictbaern, for the observatory of Buda. As the institute was now of less importance than Benedictbaern, Frauenhofer went thither in 1809, to occupy the place of optician. There he made many useful discoveries and inventions, which have raised him to the utmost celebrity as a man of science. His grinding and polishing machines, and the excellence of the flint and crown glass with which he made his telescopes, procured him the highest reputation, and his contributions in the 74th volume of "Gilbert's Annals of Physics," "Researches concerning the Laws of Light," have added to his fame. In 1817, he was admitted a member of the Academy of Sciences, at Munich, and in 1823, he was appointed conservator of the Cabinet of Natural Curiosity belonging to that institution. He died June 10, 1826.—*New German Necrol.*

FREART (ROLAND) sieur de Chambrai, a French architect of the seventeenth century, known as the author of a valuable work entitled "Ancient Architecture compared with Modern," in one volume, folio, of which there is an English translation. He also published a French version of Leonardo da Vinci's work on painting. Freart died at Paris in 1676.—*Dict. Hist.*

FREDEGARIUS, surnamed Scholasticus, an early French writer, who about the middle of the seventh century wrote a history of events from the earliest ages to the year 641. This curious work is to be found in Duchesne's Collection.—*Moreri*.

FREEMAN (WILLIAM PEERE WILLIAMS) a distinguished naval officer, who was the grandson of W. Peere Williams, an eminent law reporter. His father was a beneficed clergyman, and he was born at Peterborough, January 6, 1742. He was educated at Eton school, whence he removed at the age of fifteen, and entered as a midshipman on board the Royal Sovereign, and in the course of the

same year, he was appointed acting lieutenant of the *Rainbow*, which appointment was subsequently confirmed. In May 1768, he was made a master and commander; and in 1769, appointed to the command of the *Otter*, sloop of war. In the beginning of 1771, he was raised to the rank of captain, and successively commanded the *Wolf* and *Active* frigates, stationed in the West Indies with the fleet under Admiral Man; and he served with credit in that situation during a part of the American War. He afterwards exchanged into the *Lively*, and served under Admiral Montague, on the Boston station, North America, until ordered home towards the end of 1773. Four years afterwards, he was appointed to the command of the *Venus*, a fine frigate, stationed at Rhode Island, under the orders of Admiral Lord Howe, and from that vessel he exchanged with Captain Ferguson into the *Brune*, and in 1778, he returned to England. In April 1780, he was placed in command of the *Flora* frigate, belonging to the Channel fleet, in which, on the 10th of August ensuing, while on a cruise off Ushant, he engaged an enemy's frigate and a cutter, the former of which he captured, after a most desperate action, in which sixty-three men, including the commander, were killed on board the French frigate, which was called *La Nymphe*, while the number of killed on board the *Flora* was only nine. This action was the result of a challenge transmitted by the Chevalier du Romain, the captain of *La Nymphe*, while in the port of Ushant, to the captain of the *Flora*, and by the latter readily accepted. In March 1781, captain Williams accompanied the fleet under vice-admiral Darby to the relief of Gibraltar, whence he proceeded to Port Mahon. On the 29th of May following, the *Flora* and the *Crescent*, the latter commanded by captain (afterwards admiral sir T.) Pakenham, being near the coast of Barbary, fell in with two Dutch ships, and the next morning a furious engagement took place, which terminated in the surrender of one of the Dutch vessels, the *Castor* of thirty-two guns, to the *Flora*; and the *Crescent*, having been disabled, was saved from the enemy by the exertions of captain Williams. He was not again employed in actual service after the close of the American war, his politics being opposed to those of the government under the administration of Mr. Pitt. His country being thus deprived of his services, he spent his time in retirement, employing his ample means in deeds of benevolence, which were concealed from the world. In April 1794, he attained the rank of rear-admiral, that of vice-admiral in June 1795, and that of admiral, January 1st, 1801. On the accession of his Majesty William IV. to the throne, the station of admiral of the fleet becoming vacant, the king conferred it on admiral Williams, sending him a splendid baton as an ensign of the rank to which he had been raised. His death took place, February 16th, 1832, at Hoddesden, in Hertfordshire; and he was interred in the family vault, at Broxbourne, in the same county. Admiral

Williams assumed the name of Freeman upon the death of Strickland Freeman, Esq. of Fawley Court, Buckinghamshire, November 25, 1821, pursuant to the will of Sambrooke Freeman, Esq. dated June 1, 1774. He succeeded to large estates on this occasion, including property in the counties of Bucks, Oxford, and Berks, and in the city of London, all which, with his paternal estates, descended to his two grandsons.—*Marshall's Royal Naval Biog. United Service Journal. Ann. Biog.*

FUGGER (HULDRIC) a native of Augsburg, born in 1526. He may be considered as literally a victim to the bibliomania, his relations at length procuring a decree which took from him the administration of his own affairs in consequence of the large sums he lavished in collecting and publishing rare manuscripts. His death took place in 1584, at Heidelberg.—*Dict. Hist.*

FULTON (ROBERT) an American engineer, born in the county of Lancaster, in the state of Pennsylvania, about 1767. He was first intended for the occupation of a jeweller, which he relinquished for that of a painter. He came to England, and studied under his countryman West, with whom he continued some years, and then went into Devonshire, where he became acquainted with another American named Rumsey, who was skilled in mechanics. He then became a civil engineer, and distinguished himself by the boldness and novelty of the projects in which he engaged. While in England he published a treatise "On the Improvement of Inland Navigation," 4to, 1796, in which he proposed the use of inclined planes to supersede locks on navigable canals. In 1800 Mr Fulton, in concert with Joel Barlow, introduced panoramas into Paris, for which he obtained a patent of importation; and this proved a very profitable scheme. In France he took up the idea of submarine navigation, for the purpose of blowing up ships of war. This project he pertinaciously pursued for many years, but with little advantage. On his proposal being rejected by the French government he came to England, and made some experiments under the patronage of the late earl Stanhope. He then returned to his native country, where he constructed a sort of boat to pass under water, called a catamaran, nautilus, or torpedo; and among various other inventions, of which he published an account, were a mill for cutting and polishing marble, and a machine for twisting ropes. At length he employed himself in the improvement of steam-navigation, of which he claimed the invention; and it is said that vexation at being denied the credit of the discovery, and prevented from deriving the whole benefit of it, preyed on his mind and hastened his death, which took place at New York, February 24, 1815.—*Month. Mag. vol. xlii. Biog. Univ. Class.*

FUNES (GREGORIO) a patriot statesman of La-Plata in South America. He was dean of the cathedral church of Cordova, in which station he employed all his influence in support of the revolution which detached the

FUS

Spanish colonies from the parent state. He became a member of a junta assembled at Cordova, which, under the instigation of Liniers resisted the progress of the revolution, notwithstanding the opposition of the dean to the views of a majority of his colleagues. In 1810 he was sent as a deputy from Cordova, to the congress at Buenos Ayres, and on various subsequent occasions he acted a prominent part in the political transactions which took place in South America; as also did his brother D. Antonio Funes, who signalized himself as governor of Cordova. Dr G. Funes was chairman of the committee of congress on constitutional affairs, which, in June 1826, presented their famous report, recommending the adoption of the central form of government for the republic. He died at Buenos Ayres, January 11, 1829, at a very advanced age. Dr Funes was distinguished not only as a politician, but also as an historical writer, especially by his "Ensayo de la Historia Civil del Paraguay, Buenos Ayres, y Tucuman," published at Buenos Ayres in 1817, 3 vols. This work, which is said to have been drawn up from the most valuable materials, including many previously unedited manuscripts, contains much information concerning the countries of Buenos Ayres, Paraguay, and Tucuman, which had not been before published.—*Encycl. Amer.*

FURIUS, an ancient satiric poet of no great merit, was born at Cremona about a century before the Christian era, and from his intemperate habits acquired the surname of Bibaculus. Horace ridicules his iambics. There are some fragments of his annals to be found in the *Corpus Poetarum*.—*Fossii Poet. Lat.*

FURIUS (FREDERIC CORIOLANUS) a Spaniard of the sixteenth century, born in the kingdom of Valencia, is known as the author of a defence of the translations of the Old and New Testament, which was condemned by the council of Trent. He also wrote "Del Consejo y Consejero," and a tract on rhetoric. This author obtained the honorary distinction of historiographer to king Philip II, and died in 1592, at Valladolid.—*Morevi.*

FUSS (NICHOLAS VON) a distinguished natural philosopher and mathematician, who was born in 1755. His father was a bourgeois of the city of Basle; and he passed through the early part of his education at home, but afterwards studied in the gymnasium and then in the university of his native place, in which the celebrated Bernouilli was then professor of mathematics, to which branch of science Fuss particularly directed his attention. He obtained the confidence of this learned man, who, when he had attained the age of seventeen, sent him with introductory letters to the great mathematician Euler, at Peters-

FUS

burgh, who in consequence of the weakness of his eyes, wished to obtain the assistance of a young man in the prosecution of his philosophical inquiries. Euler received him with open arms and took him into his house, where he continued eleven years, deriving great advantage from the society and conversation of so distinguished an individual. In January 1776 he was appointed adjunct of the Academy of Sciences at Petersburg for the higher mathematics. And in 1784 he was taken into the number of the ordinary members of that institution. The same year the czarina, Catherine the Second, constituted him professor of mathematics in the corps of noble land cadets. He was admitted into the free economical society, in 1792; and appointed their secretary for foreign correspondence in 1800. In 1797 he was made professor of mathematical science in the marine corps at Petersburg: and in 1800, by an imperial ukase, was raised to the dignity of a counsellor of state. In the latter year he was elected by the academy of sciences to be their secretary in ordinary, which situation had been rendered vacant by the death of his father-in-law John Albert Euler. In 1802 a particular committee was organized for the regulation of the Russian academies, universities, and schools, of which Fuss, by the command of the emperor Alexander, was made a member; and shortly after he was nominated a member of the upper school directory. In 1805, prince Constantine constituted him one of the council for the organization of military schools; and by an imperial decree in 1814, he was made perpetual examiner of the marine corps. For his services to the economical society he was in 1801 honoured with the second order of St Anne; and his labours as a member of the academy of sciences were in 1818 and 1819 rewarded with the order of Vladimir, of the third class, and a pension. His death took place January 4, 1826. His productions relating to literature and science are numerous. Besides his contributions to the *Memoirs of the Academy of Sciences at Petersburg*, during a period of fifty years, relating chiefly to mathematics and astronomy, he published "Oratio de Philantia," 1767; "Instruction de Taillée pour porter les Lunettes au plus degré de perfection," 1774; "A Plan for an Universal Lending House," in German, 1776; "Observations et Expériences sur les Aimans Artificiels, et sur la Manière de les faire," 1778; "Réflexions sur les Satellites des Etoiles," 1782; "Eloge de M. L. Euler," 1783; "Easy Problems relating to the higher Spherical Trigonometry," in German, 1786.—*New German Necrology*, 1826.

GABRIELLI, or GABRIELI (CATERINA.)

This celebrated singer, of whom an account is given in the first volume of the present work, and the time of whose decease is stated to be uncertain, appears to be still living; at least we are not aware that any account of her death has reached this country. In a notice of her published in September 1831, it is said that she still survived in her native country, though more than a hundred years old, and but two years previously she could delight her friends by evidence of yet extraordinary powers. Among the anecdotes not related in the preceding article, it may be mentioned that, after repeated entreaties, she consented to go to St Petersburg, on condition of receiving 5000 ducats for two months, with all her expenses, and to the remonstrance of the empress Catherine II that she did not pay her field-marshal so much, Gabrielli replied to the minister who was negotiating with her, "Tell your mistress that she may set her field-marshal to sing." The haughty empress however thought proper not only to comply with the terms of the enchanting songstress, but likewise subsequently bestowed on her jewels in value far exceeding the amount of her salary.—*Month. Mag.*

GABRIELLI (JULIO) a Catholic prelate, who was a native of Rome, and died in 1822, aged seventy-four. He was raised to the see of Sinigaglia, and the dignity of a cardinal, and he occupied the office of pro-secretary of the holy see during the period of the discussions between the pope and Buonaparte, the latter of whom had him driven into exile. He returned to Rome in 1814, and was made secretary of briefs, and afterwards prefect of the congregation of the council and prodatary. Many of his writings are to be found in the *Correspondance Authentique de la Cour de Rome avec la France*, 1809, 8vo.—*Biog. Univ. Class.*

GADD (PETER ADRIAN) a Swedish chemist and natural philosopher, who died about the end of the eighteenth century. He was professor of chemistry in the university of Abo in Finland, and a member of the Academy of Sciences at Stockholm. His works, written in Swedish, consist of dissertations on geology, physics, &c.—*Ibid.*

GÄRTNER (BERNARD AUGUSTUS) a celebrated German lawyer, born at Cassel in 1719. He was successively fiscal counsellor, member of the regency of Marburg, and privy counsellor of Germany. He died in 1793. His writings relate to national jurisprudence.—*Ibid.*

GAERTNER (JOSEPH) a German naturalist, son of an eminent physician of Wirtemberg, born at Calu in 1732. Having graduated in medicine in the university of Göttingen, he travelled over great part of the north of Europe in the pursuit of his botanical studies, and settled for a while at Petersburg, where he lectured on the science.

Gaertner was a fellow of the Royal Society of London, and the author of several ingenious papers to be found among their Transactions, as also of a botanical treatise "De Fructibus et Seminibus Plantarum," 2 vols, Stutgard, 1788—91. His death took place in the latter year.—*Life by Deleuze.*

GAHN (HENRY) a distinguished Swedish chemist and natural philosopher, the pupil of the celebrated Bergman, whose researches with those of Scheele contributed to the vast improvement in chemical science which took place in the latter part of the eighteenth century. He made observations on the crystallization of calcareous spar, and the separation of the laminae of secondary crystals, disclosing the primitive form of the central nucleus; and thus laid the foundation of the discovery of the molecular arrangement of crystallized bodies in general, which was afterwards independently developed by Haüy, in his *Essay on Crystals*, published in 1784, and his subsequent works. Gahn likewise was the first who reduced manganese from the ore or brown oxyde, and ascertained it to be a metallic substance.—*Orig.*

GAIL (SOPHIA) wife of the celebrated Heltenist M. Gail, was born about 1779, and died at Paris in 1819. She distinguished herself by her taste for music and literature, and was the composer of an admired opera "Deux Jaloux," 1813; besides which she produced "Mademoiselle de Launay a Bastille;" "La Sérénade," &c.—*Biog. Univ. Class.*

GALEANO (JOSEPH) a Sicilian physician, born at Palermo in 1605, and known as the editor of a collection of the poets of his native country, in five volumes. He was also the author of a paraphrase on the writings of Hippocrates, and a few other professional tracts. His death took place in 1675.—*Moreri.*

GALL (JOHN JOSEPH) the inventor or discoverer of the science of craniology, or as it is now styled phrenology. He was born in the Duchy of Baden, in 1758. His education commenced at Baden, and he afterwards studied medicine under Prof. Hermann at Strasburg, and in 1785 he took the degree of MD. at Vienna, where he then practised as a physician. He adopted the opinion that the several faculties and dispositions incident to animated beings are connected with peculiar conformations of the surface of the brain, and that these may be traced by corresponding elevations and depressions of the skull, so that it would be possible to ascertain the intellectual qualities of any individual by an examination of the exterior of the head during life, and still more perfectly by observing the conformation of the skull after death. Dr Gall not being permitted to propagate his discoveries at Vienna, he determined to visit the north of Germany, and he was well received at the capitals of some of the German states, and in Prussia, Sweden, and Denmark, the sovereigns of which countries are said to have paid attention

to his opinions, and to have honoured him with tokens of approbation. He then visited England, and subsequently settled at Paris, where in 1810 he published, in conjunction with his disciple Dr Spurzheim, "Anatomie und Physiologie des Nerven systems neberhaupt und des Gehirnes insinsondere, mit Bemerkungen neber die Möglichkeit verschiedene Anlagen der Thiere ans der Gestalt ihrer Köpfe zu beurtheilen," a work valuable on account of the accuracy of the description of the structure of the brain, and the excellence of the plates by which it is illustrated, independent of the peculiar theory of the authors. Dr Gall died at his house at Montrouge, near Paris, August 22, 1828, aged seventy-one; and at his interment on the 27th of the same month, funeral eulogies were pronounced by professor Broussais, Dr Fossati, and Dr Londe. Besides the treatise mentioned above, Dr Gall published "Recherches sur le Système Nerveux en général, et sur celui du Cerveau en particulier: Mémoire présenté à l'Institut de France, le 14 Mars 1808. Suivi d'Observations sur le Rapport qui en a été fait à cette Compagnie par ses Commissaires," Paris, 1809, 4to.—*For. Rev. Gent. Mag.*

GALLOWAY (JOSEPH) an Anglo-American lawyer, born in England about 1730, and died in 1803. He was a member of the assembly of Pennsylvania in 1764; and he belonged to the first congress of that province in 1776. He first embraced the cause of the colonists at the beginning of the American war; but he afterwards became a royalist. He published "Observations on the Conduct of Sir William Howe," in which he animadverted severely on the excesses committed by the English troops in New Jersey. He was also the author of "Concise Commentaries on some parts of the Revelations," &c. London, 1802, 8vo.—*Biog. Univ. Class.*

GALLUCCI (ANGELO) an Italian historian of the seventeenth century, a native of Macerata, born in 1593. He received his education among the jesuits, and having become a member of the order settled at Rome, where he wrote a history of the war in the Low Countries, in Latin, under the title of "Commentarii de Bello Belgico;" there are two editions of this work, that of 1671 in 2 vols, folio, and that of 1677 in 4to, published three years after his decease.—*Dict. Hist.*

GANDOLPHY (PETER) a Catholic priest, born about 1760, and died at East Sheen in Surrey in 1821. He distinguished himself greatly as a preacher; and he published "A Defence of the Ancient Faith," 1811, 8vo; "A full Exposition of the Christian Religion," 1813, 8vo; besides other tracts. A sermon which he published, on the relations between spiritual and temporal authority, exposed him to the censure of his diocesan, against whom he appealed to the court of Rome, and defended his opinions with great firmness and ability.—*Biog. Univ. Class.*

GARAY (don MARTIN de) a Spanish statesman, who was minister of finance, and died in the province of Arragon in 1822. He

acted a conspicuous part in the management of public affairs from 1808 till the restoration of Ferdinand VII. Being made finance minister in 1816, he endeavoured to introduce reforms into the department over which he presided, by which means he gave offence to powerful courtiers, who procured his dismissal in 1818.—*Ibid.*

GARCIA (MANUEL) a distinguished musical performer and composer chiefly for the theatre, who was born at Seville, in Spain, in 1782. He commenced his education as a musician at the age of seven, in the collegiate of his native city, and he afterwards studied under Ripa. He appeared as a public singer at the opera-houses of Madrid, Paris, Rome, Naples, Turin, and London; and his talents attracted much attention, and procured him high reputation. In 1824 he was engaged as principal male singer at the King's theatre in the Haymarket, London. His voice exhibited extensive compass, considerable power, and extreme flexibility; and his acting, both in tragedy and comedy, has been characterised as highly impressive and energetic. He died in 1832. Among his principal dramatic compositions may be mentioned "Quien porfia mucho alcanza," (Op. Com.); "El Rele de Madera," (Op. Com.); "El Poeta calculista," (Op. Com.); "La Florida," (Op. Com.); "Le Califo de Bagdad," (Op. Com.); "La Donzella di Raab," (Op. Ser.); "Le Prince d'Occasion," (Op. Com.); "Il Fazzoletto," (Op. Com.); "La Mort du Tasse," (Op. Ser.); and "Florestan, ou le Conseil de Dix," (Op. Ser.); all which were performed previously to 1824, and he also produced several other operas both comic and serious. His compositions of a different class include "Endimione," a cantata for three voices; and several masses, one of which was performed at the Bavarian chapel, in London, in 1822.—*Biog. Dict. of Mus.*

GASPARINI, called BARZIZA from the place of his birth, a village in the vicinity of Bergamo, in Italy. He became professor of the belles lettres at Padua, in the early part of the fifteenth century; and he is regarded as one of the most distinguished writers who contributed to the restoration of a taste for the Latin language in his native country, by his critical observations on the writings of the classic authors of ancient Rome. He was the author of a treatise "De Orthographia;" Commentaries of the Epistles, Offices, and some other works of Cicero; Orations; and Letters, which last were printed in France in 1496, and constitute the earliest typographical production of that country. Gasparini flourished in the reign of the emperor Sigismund, at the period of the council of Constance.—*Trithemius. Biog. Univ.*

GATTERER (JOHN CHRISTOPHER) a learned German historian, who was professor of history in the university of Gottingen, in the last century. He was the author of several treatises which display a spirit of deep research and sound criticism, among which may be mentioned a "History of the World to the

time of Cyrus," 2 vols, 8vo; an "Essay towards a general Universal History to the period of the Discovery of America," 1792, which may be considered as the most complete of his elementary sketches of history; and an "Abridgement of Chronology," 1777, 8vo; all in the German language; besides "Commentationes de Theoponia Ægyptiorum," in the seventh volume of the Göttingen collections; and other contributions to classical literature. He died in 1799.—*Zopf. Mensel.*

GAUBIUS (JEROMX DAVID) a Dutch physician, the pupil of Boerhaave, born in 1705 at Heidelberg. He became professor of medicine at Leyden, and is known as the author of a variety of professional treatises, the principal of which are "Institutiones Pathologicæ Medicinalis;" "De solidis Humani Corporis Partibus;" "De Methodo concinnandi Formulas Medicamentorum;" "Adversariorum varii Argumenta;" and a "Panegyric Oration delivered on the Third Centenary of the Leyden University." Gaubius died in 1780.—*Dict. Hist.*

GAULMIN (GILBERT) a French poet and miscellaneous writer, who flourished about the middle of the seventeenth century. He held the post of counsellor of state to the French king. His writings consist of a volume of dramatic and other poems; a "Commentary on the Life and Death of Moses;" "Notes on Pællus and on Theodore Prodromus;" and a tract "On the False Calisthenes." He also printed a new edition of Ismenus and Ismenias, and died in 1667.—*Biog. Univ.*

GAY VERNON (J.) a French military officer and mathematician, born in 1760. He was admitted into the school of engineers in 1780, and was made a sub-lieutenant. In 1792 he was employed in the army of the Rhine, when he distinguished himself in the attacks of Spire and Mayence. Subsequently he acted as aide-de-camp to Custine, and then to Houchard; and being arrested, together with the latter, after the victory of Hondscoote, he did not recover his liberty till the revolution of the 9th of Thermidor. Gay Vernon was one of the founders of the Polytechnic School, of which he acted as second director for seventeen years. Having been appointed commandant of the fortress of Torgau in 1813, he was made prisoner after a brave defence, and he obtained permission to return to France on his parole. He died in 1822. He was the author of "Exposition abrégée du Cours de Géométrie descriptive appliquée à la Fortification," 1802, 4to; and "Traité Élémentaire d'Art Militaire et de Fortification," 1805, 2 vols, 4to, which has been translated into English, and various other languages.—LEONARD GAY VERNON, brother of the preceding, was a member of the Legislative Assembly, and of the National Convention; and having embraced with ardour revolutionary principles, he was in 1791 elected constitutional bishop of Upper Vienne. He voted for the death of the king, without appeal or delay; and in the sitting of November 7, 1793, he publicly resigned his episcopal

character. He was afterwards consul at Tripoli in Syria, and held other offices; but he died in retirement at his seat at Vernon, near Limoges, in 1822.—*Biog. Univ. Class.*

GAZIR (—) a learned Greek ecclesiastic, who obtained the office of archimandrite; and who died in the earlier part of 1829, in the seventieth year of his age. At the commencement of the revolution in Greece he was resident at Vienna, where he had obtained a competent fortune by his literary labours; but no sooner had his countrymen commenced their endeavours to free themselves from the Turkish yoke, than he quitted Austria, and returned home. He became a member of the first national assembly, in which, by his conciliatory spirit, he frequently repressed the conflicts of opinion and party zeal. He was the compiler of a Greek Dictionary, in three volumes; and he contributed several interesting articles on scientific subjects to the journal published at Vienna under the title of "Hermes," of which he was the principal editor.—*Elect. Rev.*

GEBANER (GEORGE CHRISTIAN) an eminent German lawyer, who was a native of Breslaw. He became professor of jurisprudence in the university of Göttingen, and his death took place in 1773. He was the author of several works of merit, in the Latin and German languages, on law and history; and he also published an edition of the Corpus Juris Romani.—*Zopf.*

GEBHARDI (LOUIS ALBERT) a voluminous historical writer, who was librarian at Hanover, where he died in 1802. He wrote various portions of the grand body of Universal History published at Halle:—the History of Denmark and Norway, 4 vols, that of Courland, one vol, and the General History of the Wendes and Slavonians, 3 vols. He was likewise author of a "General History of the Sovereign Houses of Germany," 3 vols, 8vo; and a "History of Hungary," 3 vols, 8vo.—*Idem.*

GEDDES (JAMES) an ingenious writer, who was born in Tweeddale, N.B. in 1710. He published "An Essay on the Composition and Manner of Writing of the Ancients, particularly Plato," in which the taste and learning of the author are advantageously displayed. He died in 1749.—*Lempriere's Univ. Biog.*

GEDIKE, or GEDICKE (FREDERIC) superintendent of a gymnasium at Berlin, a distinguished writer and public instructor. His publications, which are numerous, consist chiefly of editions and translations of the classics; and other works designed to facilitate the education of youth. He died in 1803.—*Zopf.*

GEDOYN (NICHOLAS) a French jesuit, canon of La Chapelle Sainte at Paris, and abbot of Beaugency, a native of Orleans, born in 1667. He is known as the author of some miscellaneous essays, entitled "Œuvres Diverses;" and as the translator of Pausanias and Quintilian. His death took place in 1774.—*Dict. Hist.*

GEER (CHARLES de) a Swedish nobleman,

knight of the order of Gustavus Vasa, and a marshal of the empire, eminent for his skill in mechanics, and his familiar acquaintance with natural history. He was born in 1720, and after receiving the rudiments of his education at Utrecht proceeded to Upsal, where he became the disciple of Linnæus. The baron de Geer applied his knowledge of mechanics to great effect in his mines at Dannemora, and thereby much increased his revenues. He was the author of a treatise, now become scarce, "On the Natural History of Insects," in seven quarto volumes, and died in 1778.—*Biog. Univ.*

GEHLEN (ADOLPHUS FERDINAND) a German chemist, who died at Munich in 1815. He was a member of the academy in that city, and one of the conductors of the General Journal of Chemistry, published at Berlin, 1803—5, 5 vols, 8vo; and of the General Journal of Chemistry and Natural Philosophy, 1806—7, 8vo. He also published a translation of Berthollet's Treatise on the Art of Dyeing, Berlin, 1806, 2 vols, 8vo; and an Essay on the Improvement of Pharmacy.—*Biog. Univ. Class.*

GEHLER (JOHN SAMUEL TRAUGOTT) a distinguished natural philosopher, who was a senator of Leipsic. He was the author of a valuable Dictionary of Natural Philosophy, in German, 6 vols, 8vo. He died in 1793.—*Zopf.*

GELASIIUS. There were three eminent prelates of this name: the first flourished in the fourth century, and was nephew to St Cyril of Jerusalem. He was bishop of Cæsarea, and was the author of a history of the church, of which some portions are yet extant. His death took place in 394.—The second, an African by birth, succeeded Felix the Third in the papal see, which he filled about four years. He drove the professors of Manicheism out of Rome, and excommunicated the emperor Anastasius for favouring the patriarch Acacius. He died in 476.—The third, in 1118, succeeded Paschal the Second in the popedom, from which he was twice driven in the course of the single year that he survived his elevation, first by Cinci Frangipani, and next by the emperor Henry V, on which latter event he retired to the abbey of Clugny, and there died in 1119.—*Dict. Hist.*

GENEST (CHARLES CLAUDE) a French abbé and dramatist, born in the metropolis in 1636. His writings consist of two tragedies, founded on the stories of Joseph and Penelope, and a treatise on "The Principles of Philosophy." His death took place in 1719.—*Biog. Univ.*

GENLIS (STEPHANIE FELICITE DUCREST de ST AUBIN, marquise de Sillery, countess de) a lady distinguished for her talents and the multiplicity of her writings, chiefly relating to education. She was born near Autun, in the province of Burgundy, in 1746. More indebted to nature than to fortune, her beauty, her genius, and her accomplishments, especially her skill in music, procured her, when young, admission to the best society in Paris.

A letter written to one of her friends being seen by the count de Genlis, it excited in his breast such an admiration of the writer as led to an acquaintance and a subsequent marriage. She thus became niece to mad. de Montesson, who was privately married to the duke of Orleans. This connexion introduced the young countess de Genlis to the Orleans family, and in 1782 she was appointed governess to the children of the duke of Chartres, the father of the present King of the French. In the prosecution of her duties as a preceptress she wrote for the use of her pupils "Adèle et Théodore;" "Les Veillées du Chateau;" and "Le Théâtre à l'Usage des Jeunes Personnes, ou Théâtre d'Education;" which were well received by the public and have been translated into English. She conducted the education of her young charge without assistance, and she also engaged in other affairs connected with the domestic economy of the family to which she was attached. It appears from her writings that she had adopted the principles of the revolution; she was acquainted with Pétion and Barrère, and she had been present in the sessions of the Jacobins; yet she quitted France in 1791, and went to London. About the time of the September massacres (1792) the duke of Orleans recalled her to Paris. Becoming suspected however by the ruling powers, she retired to Tournay, in Flanders, with her pupil, mademoiselle d'Orleans; and shortly after her adopted daughter, Pamela, was married to lord Edward Fitzgerald. In April 1793 she removed to Switzerland, and resided for some time in a convent at Bremgarten, a few miles from Zurich; but her pupil leaving her to join her aunt the princess of Condé at Friburg, madame de Genlis retired with a young female companion to Altona, where she lived in seclusion, and devoted herself to literature. At a country seat in the territory of Holstein she wrote "Les Chevaliers du Cigne, ou la Cour de Charlemagne," Hamburg, 1795, 3 vols, 8vo, a novel containing many republican sentiments, and some highly coloured scenes. She also published at this time "Précis de la Conduite de Madame de Genlis," to which is subjoined a letter to her eldest pupil, Louis-Philippe, in which she exhorted him not to accept the crown if ever it should be offered to him, because the French republic seemed to be established on moral and just foundations. When Buonaparte was at the head of affairs in France she returned to Paris: and that chief bestowed on her a house, and in 1806 a pension of 6000 francs a-year. She passed the remainder of her long life chiefly at Paris, occupied in literary pursuits; and besides other works she published "Mémoires Inédits de Mad. la Comte de Genlis sur la 18me Siècle et la Révolution Française, depuis 1756 jusqu'à nos Jours," 8 vols, 8vo. After the restoration of the Bourbons she experienced the kindest attentions from her former pupil, who, on his elevation to the throne after the revolution in 1830 offered mad. de Genlis splendid apartments in the palace of the Tuileries. This occurred just before her death,

and she is said to have been engaged in writing a note to the king, declining with expressions of gratitude the proffered favour, at three o'clock in the morning of December 31, 1830; she then retired to bed, and at ten o'clock she was found a corpse. A catalogue of the numerous works of Mad. de Genlis may be found in the first of the subjoined authorities.—*Biog. Nouv. des Contemp. Encycl. Amer. Gent. Mag.*

GENNARO (JOSEPH AURELIUS) a Neapolitan of good family, born about the commencement of the last century. He devoted his attention to the study of jurisprudence, and rose to be chief magistrate of the capital which gave him birth. His "*Repubblica Jurisconsultorum*" is a sound work, and several other legal treatises of his composition are equally remarkable for the learning they display, and the elegance of the style in which they are written.—*Traboschi*.

GENT (THOMAS) an ingenious writer on topographical antiquities, by trade a printer, which business he followed for many years in his native city, York. He was the author of an "Ancient and Modern History of York," 12mo; "Ancient and Modern History of Rippon, Yorkshire," 8vo; "History of Kingston-upon-Hull," 8vo; "History of the East Window in York Minster," 8vo; a "Life of St Robert of Knaresborough," 12mo; and "Compendious Histories of England and Rome," 12mo, 2 vols. Mr Gent died at York in 1778, in the eighty-seventh year of his age.—*Nichols's Lit. Anec.*

GEOFFROI, FRs. (STEPHEN FRANCIS) a French physician, professor of chemistry and medicine at Paris, born there in 1672. In the course of his travels through great part of Europe, he became a corresponding member of several foreign philosophical institutions, as well as of the Académie des Sciences. His principal writings consist of a pharmacopœia, entitled "*Le Code Médicamentaire*," and a posthumous tract in three volumes on the *Materia Medica*. His death took place in 1731.—*Biog. Univ.*

GEORGE IV. (GEORGE AUGUSTUS FREDERICK) king of England and Hanover, was the eldest son of George III by his queen Charlotte, princess of Mecklenburg Strelitz. He was born August 12, 1762, and was declared Prince of Wales and Duke of Cornwall a few days afterwards. His education was confided at first to Dr William Markham, afterwards Archbishop of York, and Dr Jackson; and subsequently to the year 1776 to Dr Richard Hurd, (Bishop of Worcester,) and Mr Arnold of St John's College, Cambridge. His instructors appear to have done their duty, and as the prince was by no means deficient in natural abilities, he acquired a competent knowledge of literature and science. The ornamental part of his education, as may be supposed, was not neglected; and possessing a handsome person and agreeable manners, his high rank rendered him the idol of the world of fashion, and also, in no small degree, of the people. It has been thought

that while in his adolescence he was subject to too much restraint, one of the apparent consequences of which was the assumption of an excessive license when delivered from preceptorial restraints. His commencement in life was marked by a liking for brilliant but dissipated company, of that epicurean description which unites wit and elegance with great license, and renders the intellect itself an administering slave to self-indulgence. Heirs apparent in England have generally, in modern times at least, become objects of attention to courtiers opposed to the politics of the reigning prince. The successor of George III formed no exception to this rule, and early became the companion and associate of the leading Whig statesmen and families, which including the names of Fox, Burke, Sheridan, and other distinguished personages, gave an ease and superiority to his address and manners for which he was to the very close of life remarkable. The effect upon principles and opinions was not always so manifest, but it must at the same time be remarked that the events of the French revolution operated strongly and widely upon those of all orders of men, and even led to divisions among the politicians themselves who first obtained his notice. At an early period he became acquainted with Mrs. Robinson, (see DICR.) then an actress, and that circumstance and the rank of the royal lover induced contemporary chroniclers of fashionable intrigues to record the history of their attachment, under the feigned names of Florisel and Perdita. Their connexion, as is not unusual in such cases, was but transient. Probably some new object supplanted the lady, who complained greatly of the desertion of her admirer, and of the illiberality of his conduct, but with what degree of justice it is perhaps now impossible to decide. Nor is any part of the affair worthy attention except to remark that this amour commenced a long course of similar attachments, several of which exhibited the sort of personal degradation which even noblemen may be induced to endure, and princes to be pleased with. The prince subsequently formed a more lasting engagement with Mrs. Fitzherbert, a widow lady of good family, and a professed Catholic, who, although by no means young, still retained a considerable share of personal beauty. It has been generally understood that a private marriage took place, and the circumstance not only excited the serious displeasure of the king, but also became the subject of public alarm, as the contract was a violation of the act of settlement which fixed the House of Hanover on the British throne, and likewise of a more recent act of parliament relating to royal marriages, which had been passed in consequence of the matrimonial engagements formed by the king's brothers. During the period that elapsed between August 1783, when the prince attained the age of majority, and the year 1787, he had lived in an extravagant manner, so that his affairs had become extremely deranged. It is true that on

the first formation of his establishment, notwithstanding the representations of Mr Fox, then minister, the king demanded for his son from Parliament a revenue of but 50,000*l.* a year, though preceding princes of Wales had received double that income. In these circumstances he became loaded with debts to the amount of 300,000*l.* He applied to the king for assistance, but his majesty, after having, for form sake, instituted an examination into the state of the prince's affairs, refused to afford him any aid whatever. This refusal compelled him to adopt a system of retrenchment, in which he persevered for nearly twelve months. He sold off his stud of racing horses, discharged many of his state servants, and discontinued the erection of buildings which he had been induced to undertake; but all these sacrifices were inadequate to the object in view, and by the advice of his confidential counsellors he was induced to apply to Parliament for relief. A motion was made in the House of Commons, April 20, 1787, by Alderman Newnham, for an inquiry into the affairs of the prince of Wales, in order to the obtainment of a grant of money from the nation. The king now became apprehensive of inconvenience from the public discussion of the circumstances connected with the necessities of the heir apparent to the crown, and Mr Pitt, the prime minister, having acted as mediator on the occasion, a message was delivered to Parliament, announcing that the prince would receive an augmentation of his revenue to the amount of 10,000*l.* a year from the civil list. The House of Commons, in return, voted an address to his majesty, begging that he would authorize an additional grant of 160,000*l.* from the public purse towards the extinction of the prince's debts, and this accordingly took place. Towards the end of the year 1788 the king exhibited symptoms of mental derangement, which led to important discussions in parliament relative to the appointment of a regency. Mr Pitt opposed the claims of the prince to the office of regent; without restrictions as to power and influence, and notwithstanding the resistance of Mr Fox and his party, Parliament sanctioned the views of the minister; but the king's recovery terminated these proceedings. In 1793 the prince, who was still encumbered with debts, was induced by the conditional promise of an increase of his income to take as a wife his cousin, the Princess Caroline Amelia Elizabeth, second daughter of the Duke of Brunswick. The marriage was celebrated April 8, 1795, and the prince's revenue was then raised to 120,000*l.* a year. This most ill-starred union, after the birth of a daughter, (the late Princess Charlotte of Wales,) was virtually dissolved by agreement between the parties. The subsequent complaints of the princess and recriminations of the prince were productive repeatedly of very extraordinary investigations, the result of which was but little advantageous to either of those who were most interested in them. During the

long war between England and France, when Napoleon threatened this country with an invasion, the prince was only colonel of a regiment of dragoons, while his next brother, the Duke of York, was commander in chief of the army, and his younger brothers were general officers. Dissatisfied with his situation, he repeatedly applied for military promotion, but the king and the ministry rejected his solicitations. Toward the close of 1810 the king's malady recurred, and he became incapable of attending to the duties of his high station. The prince was therefore appointed regent by act of parliament, and he took the oath accordingly, February 6, 1811. Some limitations were imposed on the exercise of regal power by the regent, who during the first year was restrained from creating peers, except for great public services, from making appointments for life, and from some other acts of sovereign authority. As the king, however, remained in the same melancholy state of derangement till his death, the regent, at the end of the appointed period, entered into the enjoyment of all the substantial attributes of royalty. Many had anticipated a change of state policy on the accession of the prince to power, from the influence of his early political connexions; but such expectations were not fulfilled, for he retained his father's ministers, and suffering himself to be guided by their advice, he supported the cause of legitimacy on the continent, and contributed materially to the overthrow of Buonaparte, and the restoration of the Bourbons to the throne of France, all which are affairs rather of history than biography. Soon after that event he received a visit from the Emperor of Russia, the King of Prussia, and other foreign princes, whom he entertained with great splendour in the metropolis. After the battle of Waterloo Napoleon appealed to the generosity of the prince regent, to whom he addressed a letter, in which he said—"Like Themistocles, I throw myself upon the protection of the most persevering, but the most generous of my enemies." It should be recollected that Buonaparte was not like Themistocles a voluntary suppliant, nor was the prince regent of Britain like the ruler of Persia, in the uncontrolled possession of supreme power; the different manner in which they acted was therefore the result of circumstances, although inclination might not be wanting. To the league called the Holy Alliance the prince gave his assent only in his individual character, (October 6, 1815), the principles of the British constitution not permitting his formal accession to the alliance as king. In March 1816 he informed Parliament of the purposed union of his daughter with Prince Leopold of Saxe Coburg, (now king of Belgium,) which took place May 2. When he went to open the session of parliament, January 28, 1817, the people being much excited by public distress, a mob collected, and his life was endangered. January 29, 1820, he succeeded to the crown on the death of his father; and his coronation, under

the title of George IV, was celebrated with great ceremony, July 19, 1821. The proceedings instituted in the House of Lords against the queen, the relinquishment of that mode of investigation by the ministry, and death of that unfortunate princess not long after, though circumstances intimately connected with the personal history of the king, cannot here be made the subject of further discussion. In the summer of 1821 the king visited Ireland, and in September the same year he went to Hanover, having appointed a commission of government under the presidency of the Duke of York for the management of public affairs during his absence. In 1822 he made a similar visit to Scotland, whence he was recalled by the death of his minister the marquis of Londonderry. The history of the great political events which distinguished the reign of George IV must be sought in the annals of the nation. The most important public measure carried into execution in the latter part of his reign was the introduction of Roman Catholics into the senate, and the removal of the restrictions which had existed against their holding offices under government, usually styled Catholic Emancipation, the bill for authorizing which received the royal assent in April, 1829. The king having all his life been greatly devoted to the pleasures of the table, he suffered accordingly from the gout and dropsy in the chest, which at length caused his death June 26, 1830, when he was succeeded by his brother the Duke of Clarence, now William IV. His late majesty founded the Royal Society of Literature in 1820, and he presented to the nation a library collected by his father, comprising 65,250 volumes, besides pamphlets, maps, and plans, deposited in the British Museum. As a sovereign, looking to the events of his regency and reign, George IV will appear to some advantage; as respects personal character and conduct, less indulgence will probably be manifested. A decided sensualist in every species of self-indulgence, the usual operation of that tendency upon intellect and temper was observable even early in life, and became still more conspicuous as it advanced. Reckless profusion, and a childish love of gaudy pomp and finery, great caprice and instability of temper in respect to personal friendships and attachments, and a sickly fastidiousness as to society, very unpopular in the sovereign of a free people, were among some of the worst results of that abandonment to pleasure, and what even in princes must be called gross gratifications, by which he was all his life distinguished. As regards the common voice he possibly never recovered the effect of the ill-judged persecution of the queen, whose cause, on the other hand, was certainly patronised far beyond its merits. This distaste on the part of the people was naturally increased by the excessive dislike to be seen out of his own circle by which the last years of his life were signalized; so that setting aside a few personal intimates and favourites,

APP. BIOG. DICT.

it has been the lot of few princes to die less lamented. So absolute a self-dedication all his life to pleasure is the more to be regretted, as the intellect of George IV was very respectable; his information tolerably extensive, and his powers of memory and conversation of a very superior order, so that had he escaped the effect of the Circean cup in due time, he might have taken his station among intellectual princes of the second order. As it is he will in a few years be little known, except by the events of his period of sway, which, however it may be with biography, will always ensure him a place of considerable eminence in the impartial pages of history, and in that national species of record with which his name will be indissolubly connected.

GEORGET (JOHN) an eminent painter on porcelain, who died at Paris in 1823. He left two works, admirably executed, "Charles V and Francis I visiting the Tombs at St Denis," copied from M. Gros; and "The Dropsical Woman," from Gerard Dow. For a particular account of the works of this artist, see Notice sur l'Exposition des Produits des Manufactures Royales, 1820.—*Biog. Univ. Class.*

GERARD (LOUIS) an eminent physician and botanist, born at Cotignac, in the department of Var in France, in 1733. He was a corresponding member of the Institute, distinguished for his researches into the various branches of natural science; and he first pointed out the natural affinities of plants, in his work entitled "Lud. Gerardi Flora Gallo-Provincialis," Paris, 1761, 8vo, though the original idea of this doctrine belongs to Bernard de Jussieu, who had stated it in his lectures at the garden of Trianon at Versailles in 1759. L. Gerard was the author of a great number of memoirs, published in periodical journals; and he furnished various communications for the works of other writers. He died in 1819.—*Ibid.*

GERARD (PHILIP LOUIS) canon of the church of St Louis du Louvre at Paris, was born in that city in 1737, and died in 1813. He was the author of "Le Comte de Valmont, ou les Egaremens de la Raison," a kind of moral and religious romance, to which he afterwards added a supplement, entitled "Théorie de Bonheur," which passed through twenty editions; "Les Leçons de l'Histoire, ou Lettres d'un Père à son Fils sur les Faits intéressans de l'Histoire Universelle," 1786—1806, 11 vols, 12mo, besides other works.—*Ibid.*

GERARD DE RAYNEVAL (JOSEPH MATHIAS) a French diplomatist, who died at Paris in 1812, aged seventy-six. He was employed as secretary of embassy in many political missions; and he subsequently acted as chief of the division in the office of foreign affairs during twenty years, in the course of which he took part in several important negotiations, particularly in the treaty of commerce with England in 1786. He published "Institution au Droit Public d'Allemagne," Leipsic, 1766, 8vo; "Institution au Droit de la Na-

L

GER

ture et des Gens," Paris, 1803, 8vo; and "De la Liberté des Mers," 1811, 8vo. He left in manuscript a commentary on Machiavel.—*Biog. Univ. Class.*

GERARDIN (SEBASTIAN) a distinguished naturalist, born at Mirecourt, in France, in 1751, and died at Paris in 1816. He was the author of "Tableau Élémentaire de Botanique," 1815, 8vo; "Tableau Élémentaire d'Ornithologie, ou Histoire Naturelle des Oiseaux que l'on rencontre communément en France;" together with "Traité sur la Manière de conserver leurs Dépouilles pour en former des Collections," 1806, 2 vols, 8vo, with a quarto atlas; "Essai de Physiologie Végétale," 1810, 2 vols, 8vo; and "Dictionnaire Raisonné de Botanique," 1817, 8vo. This last work was completed by M. Desaux, who prefixed to it a short notice relative to the author.—*Ibid.*

GERBAIS (JOHN) a French civilian, doctor of the Sorbonne, and superintendent of the college at Rheims. He was the author of "A Treatise on the Authority of Rings over Marriages," 4to; "A Letter on the Ornaments and Luxury of Female Dress;" another "On Comedy;" and a tract, "De Causis Majoribus." His death took place at Rheims about the close of the seventeenth century.—*Moreri.*

GERBELIUS (NICHOLAS) a German writer of the sixteenth century, born at Pforzheim. He filled the professor's chair in jurisprudence at the university of Strasburg, and is known as the author of a Life of John Speishammer, better known by the name of Cuspinian; a treatise "On the Rise and Progress of the Sect of Anabaptists;" and a topographical account of Greece, entitled "Isagoge in Tabulam Græciæ N. Sophiani," folio. He also superintended the publication of a new edition of the New Testament. Gerbelius died at Strasburg in 1560.—*Dict. Hist.*

GERMON. There were two of this name. ANASTARIUS, a canonist, born about the middle of the sixteenth century at Turin, where he devoted himself to the study of ecclesiastical law, and entering the church became archdeacon of Turin, and eventually archbishop of Tarantesia. He was employed on a political mission to the court of Spain, and died in the metropolis of that kingdom in 1627, at a very advanced age. There is an edition of his works in one volume, folio, Rome, 1823.—BARTHOLOMEW GERMON, a French jesuit, born in 1663 at Orleans, is known as the author of a treatise "On the Early Corrupters of the Text of the Sacred Writings;" and another "On the Ancient Charters of the Kings of France," written against Mabillon. His death took place in 1718.—*Moreri.*

GERSEN DE CABANACO (JOHN) an Italian ecclesiastic, who appears to have been the real author of the celebrated treatise "De Imitatione Jesu Christi," commonly published under the name of Thomas à Kempis. He was a native of Cabaliaca or Cavaglia, who became a Benedictine monk, and at length abbot of the monastery of St Stephen

GEZ

of the citadel at Vercell, in Lombardy, where he wrote the work in question between the years 1220 and 1240. The long controversy relative to the authorship of this devotional tract, which occupied the pens of Bernardin Rossignoli, Constantine Cajetan, librarian of the Vatican, Fathers Rosweide, Mabillon, Du Molinet, and others, seems to have been satisfactorily terminated in a "Mémoire sur le Vritable Auteur de l'Imitation de Jésus-Christ; par G. de Gregory," edited by Count Lanjuinais, Paris, 1827, 12mo.—*Rev. Encycl.*

GESENIUS (WILLIAM) a German physician, whose proper name was Gehlen or Geslen. He was born at Schoningen, in the duchy of Brunswick, in 1760; and after practising medicine at Nordhausen and at Walkenried, he died in 1801. He published, in German, "An Essay towards an Encyclopædia of Lepidopterology," Erfurt, 1786, 8vo; "Medicomoral Pathematology," 1786, 8vo; "A Treatise on the Bilious and Epidemic Putrid Fever of the Years 1785 and 1786," Leipsic, 1788, 8vo; "A Descriptive Catalogus of Medicines from the Vegetable Kingdom," Stendal, 1790, folio; and "A Manual of the Materia Medica," 1791, 8vo.—*Biog. Univ. Class.*

GEUNS (STEPHEN van) a Dutch physician, born at Groningen in 1767, and who died in 1795. Having finished his classical studies in 1782, he wished to have entered into the sea service for the purpose of collecting objects of curiosity in foreign countries; but being dissuaded from his purpose, he applied himself to the sciences of medicine and natural philosophy, and in 1788 he obtained a prize from the Academy of Sciences at Haerlem for an essay on the advantages which the Hollanders might derive from researches into natural history. After having taken the degree of doctor in philosophy and medicine under his father, who was a distinguished professor in the university of Harderwyk, he became coadjutor of professor Nahuyt at Utrecht. His death took place in 1795. He published "Plantarum Belgii, &c. Spicilegium." Harderov. 1788, 8vo, and other works.—*Ibid.*

GEUSS (JOHN MICHAEL) an ingenious writer, born in the duchy of Holstein in 1745. He devoted himself to the study of mechanics and the mathematics, of which latter science he was professor in the Danish capital. He was the author of a work "On the Construction of Mines;" some tables of logarithms taken from Henry Briggs's Arithmetica Logarithmica; and a translation from the German of a Voyage to Iceland, in two 4to volumes. His death took place at Copenhagen in 1786.—*Biog. Univ.*

GEZELIUS (JOHN) professor of theology and Greek, was born in 1615 in Finland, in the parish of Gezala, whence he derived the name of Gezelius. He became bishop of Abo, the capital of Finland, and died in 1690. He left a Greek Grammar; a Hebrew Grammar; an "Abridged Encyclopædia of the Sciences;" a "Pentaglott Dictionary;" besides many other learned works: and he had undertaken a commentary on the Bible, in Swedish, which

was completed and published by his son.—**JOHN GZELIUS**, son of the preceding, born in 1647, succeeded his father in the bishopric of Abo, and died near Stockholm in 1718. Besides other works, he published a translation of the Bible into the Finlandish language.—*Biog. Univ. Class.*

GZELIUS (**GEORGE**) a Swedish divine and man of letters, born about 1736. He became curate and archdeacon of Lillkyrka in Nerica, and obtained the post of almoner to the king. His death occurred in 1789. He deserves to be commemorated as the author of "A Biographical Dictionary of Illustrious Swedes," published at Stockholm and Upsal, 1776—78, 3 vols, 8vo, with a Supplement, 1780. This work comprehends the period from Gustavus I, 1521, to Gustavus III, 1771.—*Ibid.*

GEZERI (**ABU'L AZ ISMAEL**) an Arabian engineer, the period of whose existence is uncertain. He was the author of "A Treatise on ingeniously invented Machines," divided into six books, which was translated from the Arabic into Turkish, and dedicated to sultan Selim. In the royal library at Paris is a treatise on hydraulics by this author, which appears to be an extract from the preceding work.—*Ibid.*

GHERARDESCA (**UGOLINO della**) better known under the appellation of count Ugolino, under which he is immortalized in the *Inferno* of Dante. He became the head of his family after the departure of counts Gerard and Galvano, who followed prince Conradin in his expedition to Naples. Being invited by the Ghibelin party to take the direction of public affairs, and become chief magistrate of Pisa, the count wished to govern his fellow-citizens, and found a new principality, after the example of Della Scala at Verona, and Visconti at Milan. But his intrigues were discovered, and he was seized and imprisoned. Having made his escape, he obtained the assistance of an army of Florentines and Luccans, and obliged his countrymen to recall him. After a time he resumed his machinations, and procured the office of captain-general of the republic, when he strengthened his authority, set his enemies at defiance, drove some into exile, and put others to death, making himself the despot of his country. At length he engaged in a quarrel with Roger d'Ubal dini, the archbishop of Pisa, who was as cruel and ambitious as himself. That prelate formed a conspiracy against him, and having induced the Pisans to take arms, on the 1st of July, 1288, count Ugolino was attacked in his palace, and after a brave resistance, taken captive with three of his sons and one of his grandsons. Roger confined these five persons, whom Dante has so impressively celebrated, in a tower near the city, and left them to die of hunger, having thrown into the Arno the keys of their horrible habitation. The talents of poets, painters, sculptors, and engravers, have been employed in commemorating the sufferings of count Ugolino, which, as Sismondi observes, have excited universal com-

miseration, while his crimes have been forgotten.—*Biog. Univ.*

GHINGHI (**FRANCIS**) a celebrated engraver of gems, born at Florence in 1689. He studied drawing in the ducal gallery, and being engaged by Ferdinand de' Medici to apply himself to engraving on precious stones in the taste of the antique, he was very successful. A portrait of the grand duke Cosmo III, which he executed in two colours on a chalcedony, procured him much reputation; and his cameos, representing the figures of Savonarola, of Adrian, of Trajan, and others of the Roman emperors, were also much admired. He died at Naples in 1766.—*Biog. Univ. Class.*

GHISTELE (**JOSEF van**) grand bailli of Ghent, was born in that city about the middle of the fifteenth century. Religious motives induced him to undertake a voyage to the Holy Land in 1480; and he wrote a curious account of his peregrination, which was printed at Ghent, 1572, small folio, in Gothic letters.—*Ibid.*

GIANNI (**FRANCIS**) an Italian poet, born at Rome about 1760. He was employed in working as a staymaker, when the perusal of the verses of Ariosto awakened a talent for poetry. He afterwards became an imitator of Marini, and distinguished himself for improvisation before he had learnt the art of composition. Amidst many faults he displayed traits of sublimity, and a brilliant imagination. Being admitted into the *Accademia di Forti*, Gianni excited a general enthusiasm in his favour; and encouraged by his success, he travelled over Italy, and going to Genoa he celebrated the victories of Buonaparte. His military songs on the battles of Marengo, Austerlitz, Jena, Friedland, &c. are reckoned models of excellence in their kind. The genius of this poet appeared to be extinguished together with the power of his patron, after whose overthrow he sunk into the most abject superstition. He fancied himself admitted to an intercourse with angels, and aspired to the perfection of the contemplative life. His poetical talents were from this time only employed in composing sonnets addressed to God; and a will, in verse, in which he bequeathed legacies to the Virgin Mary and the saints. He died at Paris in 1823.—*Ibid.*

GIB (**ADAM**) a Scottish seceding clergyman, founder of the party called Anti-burghers, who separated from the church in consequence of a dispute respecting the oaths taken by the burghesses. He was a native of Perthshire, born in 1713, and educated at Edinburgh. His writings consist principally of "An Essay on Liberty and Necessity;" "A Display of the Secession Testimony;" and "Sacred Contemplations." Mr Gib died in 1788.—*Encyc. Brit.*

GIBELIN (**ESPRIT ANTOINE**) a French painter and antiquary, born at Aix, in Provence, in 1739. He distinguished himself by reviving the art of monochromatic painting in fresco. His principal productions in fresco are at the school of medicine and the military

school at Paris. He also painted in oil; and he was the author of several works on archæology and the fine arts, and of "Eloge funèbre du Général Dugommier." He died at Aix, December 23, 1814.—*Biog. Univ. Class.*

GIBERTUS or **GIBERTO** (GIOVANNI MATTEO) bishop of Verona, a native of Palermo in Sicily. He flourished in the earlier part of the sixteenth century, and was a great encourager of ecclesiastical learning, printing editions of several of the fathers in the original Greek, with types cast at his own expense. There is a life of him prefixed to an edition of his works which appeared in 1733. This munificent prelate died about the year 1543.—*Traboschi.*

GIERIG (THEOPHILUS ERDMANN) a German philologist, born at Wehrau in Upper Lusatia in 1753. He was successively rector of Lennep in the duchy of Berg, professor of theology and gymnasiarch at Dortmund, and at length professor and rector at the lyceum of Fulda, where he died in 1814. Among his principal publications may be mentioned "Plutarchi Instituta et Excerpta, Apophthegmatica Laconica, &c." Leipsic, 1779, 8vo; "P. Ovidii Nasonis Metamorphoseos, ex recensione Burmanni," 1784—87, 2 vols. 8vo; "C. Plinii Secundi Panegyricus Trajano dictus," 1796, 8vo; "La Vie, le Caractère Moral, et le Mérite Littéraire de Pline le Jeune," Dortmund, 1798, 8vo; and "C. Plinii Epistolarum Lib. X." Amsterdam and Leipsic, 1806, 8vo.—*Biog. Univ. Class.*

GIFFORD (WILLIAM) a celebrated writer and satirist, the founder, and for a considerable period the editor, of the *Quarterly Review*. He was born at Ashburton in Devonshire, in April 1756. His father carried on business as a plumber and glazier at South Molton, and having dissipated his property by extravagance and intemperance, he died when the son was about twelve years old. His widow soon followed him to the grave; and William Gifford fell under the guardianship of a person who sent him to sea with the master of a coasting vessel, but in a few months removed him from that situation, and apprenticed him to a shoe-maker at Ashburton. Disgusted with this occupation, and possessing a strong taste for study, he was fortunate enough to attract the notice of Mr Cookesley, a surgeon of the town in which he resided, who raised a subscription to purchase his freedom for the latter part of the term of his indentures, and to pay for his education. After having passed two years at school, he was, through the exertions of the same kind friend, supplied with the means of continuing his studies at Oxford, where he also obtained the office of Bible reader at Exeter college. While at the university he undertook a poetical translation of the *Satires of Juvenal*, but the death of his patron Mr Cookesley interrupted the progress of the work; and at length, through a fortunate accident, he was introduced to earl Grosvenor, and he quitted Oxford to reside in the family of that nobleman. He afterwards travelled on the continent with lord Belgrave for

some years; and on his return to England he settled in the metropolis, devoting his time to literary pursuits. In 1791 he published "*The Baviad*," a poetical satire, in which he lashed the rhyming favourites of that period; and in 1794 appeared "*The Mæviad*," a severe animadversion on the degraded state of the drama. These works, though deformed by virulence of language and coarseness of expression, display much critical ability, and procured the author great reputation. In 1797 he became editor of *The Anti-Jacobin* newspaper, an office which involved him in a quarrel with Dr Wolcot, against whom he published a pamphlet in verse, entitled "*An Epistle to Peter Pindar*." His poetical translation of the *Satires of Juvenal*, which had been delayed by his various engagements, was published in 1802, and it is executed in a manner highly creditable to his abilities. His next publication was an edition of the plays of Massinger, with Notes, and a life of that dramatist; and he afterwards edited in a similar manner the works of Ben Jonson, Ford, and Shirley. In 1809 he commenced the publication of "*The Quarterly Review*," of which he continued to be conductor till 1824, when the infirmities of old age obliged him to resign that office. His death took place December 31, 1826, at his residence at Pimlico, near London, and he was interred on the 8th of January following, in Westminster abbey. Besides the works already noticed, he was the author of a translation of the *Satires of Persius*. He enjoyed an annuity from lord Grosvenor, and he held the office of paymaster of the band of gentlemen pensioners, with a salary of 300*l.* a-year; and for a time he was comptroller of the lottery, with a salary of 600*l.* a-year; so that being a single man, he died in opulent circumstances.—*Autobiography*, vol. xi. *Gent. Mag.*

GILBERT (FRANCIS HILARY) a French writer on veterinary medicine and rural economy, a member of the National Institute. He was born at Chatellerault, in 1757. He contributed powerfully by his exertions and his writings to the improvement of the system of cultivation, and the management of sheep. In 1797 he was sent by the Directory to Spain, to procure a flock of Merinos; but not being properly furnished with the funds necessary for the execution of the scheme, he was so distressed at the disappointment of his hopes, that he put an end to his life in a village in Castile, Sept. 8, 1800. He published many *Memoirs* in the *Magasin Encyclopédique*, the *Cours d'Agriculture* of Rosier, and other journals; besides several distinct works, the titles of which may be found in the annexed authority.—*Biog. Univ. Class.*

GILBERT (NICHOLAS PETER) a French physician, who was a native of Brest. He went to the East Indies as an assistant-surgeon in 1770; and he afterwards practised his profession at Landernau, at Morlaix, and at Rennes. He was then appointed chief physician to the army of the Sambre and Meuse, and made subsequently professor at the military

hospital of instruction formed at Paris in 1796. He received the title of chief physician to the army of St Domingo in 1802; and he held the same post in the grand army in 1806, which situation he retained till 1812. His death took place December 19, 1814. Among his works are, "Histoire Médicale de l'Armée Française à St Domingue en an X, ou Mémoire sur la Fièvre Jaune, avec un Apperçu de la Topographie Médicale de cette Colonie," 8vo; and "Les Théories Médicales Modernes comparées entre elles et rapprochées de la Médec. d'Observation."—*Ibid.*

GILBERT (JOHN EMMANUEL) an eminent French physician and naturalist, born at Lyons in 1741. He was invited to Poland in 1775, and he founded at Grodno a noble botanic garden, and drew a large concourse of auditors to his lectures on clinical medicine. His health obliging him to return to France, he settled at Lyons, where he was appointed physician to the Hôtel Dieu, chief physician for epidemic diseases, professor at the college of medicine, and member of the Academy, and of the Agricultural Society. In 1793 he was chosen mayor of Lyons; and after the capture of that city by the republicans he wandered from one asylum to another till the conclusion of the reign of terror, when he was enabled to return home. He was afterwards nominated professor of natural history at the central school, where he continued till his death in 1814. He published "Histoire des Plantes de l'Europe, ou Elémens de Botanique pratique," 2nd edit. 1806, 3 vols, 8vo; "Le Médecin Naturaliste, ou Observations de Médecine et d'Histoire Naturelle," 1800, 12mo; besides other works.—*Ibid.*

GILJ (PHILIP LOUIS) an Italian botanist, born at Corneto in 1756, and died in 1821. He was a canon of the Vatican, and director of the observatory founded by Gregory XIII. He published, besides other works, "Dissertazione sulle Machine Igrometriche," Rome, 1775; "Agri Romani Historia Naturalis," 1781; and "Osserv. Filolog. sopra alcune Pianta esotiche introd. in Roma," 1789 and 1792. He also left various works in MS, including a "Treatise on Lightning Conductors," and a "Life of Zabaglia."—*Ibid.*

GILLI (PHILIPPE SAUVKUR) a jesuit missionary, who resided eighteen years in South America, whither he went in 1740. He was a native of Rome, and returning to his native country after the suppression of his order, he published in Italian "A Natural, Civil, and Sacred History of the Spanish Kingdoms and Provinces of Terra-Firma, in South America," Rome, 1780—84, 4 vols, 8vo.—*Humboldt, Biog. Univ. Class.*

GILLIES (JOHN) a learned Scottish historian, born at Brechin, in the shire of Forfar, about 1750. He received his education at the university of Glasgow, and became tutor to one of the younger sons of the earl of Hoptown, with whom he travelled for some years on the continent. Returning to England he took up his residence in London, and having distinguished himself by his writings, he re-

ceived the diploma of LL.D., was chosen a fellow of the royal and antiquarian societies, and appointed historiographer to his majesty for Scotland. His death took place in 1824. He was the author of a "History of Ancient Greece till the division of the Macedonian Empire," 1786, 2 vols, 4to, republished in octavo; a work which though inferior in point of erudition and critical judgment to the Grecian History of Mitford, greatly surpasses it in taste and elegance of style; and it has been translated into the French and German languages; "History of the World, from the age of Alexander to that of Augustus," 1807, 2 vols, 4to, a supplement to the preceding; "A View of the Reign of Frederic II of Prussia, with a Parallel between that Prince and Philip II of Macedon," 1789, 8vo; and he published the "Orations of Lysias and Isocrates, translated from the Greek," 1778, 4to; "Aristotle's Ethics and Politics, from the Greek, with Notes, and an Analysis of his Speculative Works," 1797, 2 vols, 4to; and a "Supplement to the Analysis of Aristotle's Speculative Works," 1804, 4to.—*Biog. Dict. of Living Authors. Edit.*

GINGUENE (PETER LOUIS) an eminent French writer, born at Rennes in 1748. He began his career by the publication of a piece in verse, entitled "La Confession de Zulmé," which procured him considerable reputation; and he afterwards became a candidate, though without success, for several poetical prizes offered by the academy. In the contest among the French literati relative to the comparative merits of the musicians Gluck and Piccini, he appeared as the advocate of the latter. On the commencement of the revolution he engaged with Cerutti in conducting a journal called *La Feuille Villageoise*. Being among the more moderate advocates for liberty, he was imprisoned during the ascendancy of Robespierre, on whose fall he obtained his freedom. Some time after he was appointed a member of the committee of public instruction; and under the Directory he was sent ambassador to Turin. Buonaparte, when Consul, gave Ginguene a place in the tribunate; but as he opposed the political measures of the first consul, he was removed from his office. From that time he devoted himself to literature, and the principal fruit of his studies is his "*Histoire Littéraire de l'Italie*," the first six volumes of which appeared between 1811 and 1813; the 7th, 8th, and 9th volumes were completed by M. Salfi. Ginguene died at Paris, November 16, 1816. He was the author of several works besides those already mentioned, for a list of which see the annexed authorities.—*Bibliog. de la France, 1817. Hist. Litt. de la France, tom. xiv. Biog. Univ. Class.*

GIRARD DE LOURMARIN (IGNACE HENRI FREDERIC de) a French civil engineer, who died in 1819 at Marseilles, whither he had gone to construct a steam-engine. In conjunction with brother Philip de Girard he made great improvements in various processes connected with his professional pursuits. Though these artists contrived machines for

spinning flax, optical instruments, and other important pieces of mechanism, their popular reputation has been chiefly extended by their "*Lampes à la Girard*." M. H. de Girard, the son of Ignace, a staff-officer in the army, is said to have invented the method of discharging artillery by the force of steam.—*Biog. Univ. Class.*

GIRDLESTONE (THOMAS) an eminent physician and medical writer. He was born at Holt, in Norfolk, in 1758; and after being engaged more than thirty years in professional practice at Yarmouth in the same county, he died, in consequence of aneurism of the heart, June 25, 1822. His writings on medicine consist of "Essays on the Hepatitides and Spasmodic Affections in India, founded on Observations made whilst on Service with his Majesty's Troops in different parts of that Country," 1787, 8vo; "A Case of Diabetes, with an Historical Sketch of that Disease," 1799, 8vo; and numerous contributions to medical journals. Dr Girdlestone likewise published "The Odes of Anacreon translated into English Verse;" and a tract relative to the authorship of the Letters of Junius.—*Biog. Dict. of Living Authors. Edit.*

GIRODET TRIOSON (ANNE LOUIS) a distinguished French painter, who was a pupil of David. He was born at Montargis in 1767, and died at Paris, December 9, 1824. At the age of thirteen he made a portrait of his father, and at twenty-two he gained a principal prize. Going to Rome as a student, he executed a painting of the Sleep of Endymion, and another of Hippocrates refusing the Presents of Artaxerxes. The revolution taking place, he returned to France; and he successively produced the Scene of the Deluge; the Funeral of Atala; the Revolt of Cairo; and at length Pygmalion, and Galatea. Besides his more important works, he made designs for the illustration of the poems of Anacreon, the *Æneid* of Virgil, &c. from which engravings have been published.—*Biog. Univ. Class.*

GJOERANSON (JOHN) a Swedish divine and antiquary of the eighteenth century. He published a part of the MS. of the "*Edäa*;" and "*Kallinga, or the Literature and Religion of the Goths in Sweden*," Stockholm, 1747, folio; "*Bautil, or Runic Inscriptions on Stones in Sweden, from the Year of the World 2000 to AD. 1000*," 1750, 4to. Both these works are in the Swedish language.—*Ibid.*

GJOERWELL (CHARLES CHRISTOPHER) a civilian of distinguished eminence, who was librarian to the king of Sweden. He was born in the province of Scania in 1731, and died in 1811. He was the founder of literary journals in Sweden, and the first periodical work which he produced was published in 1755, under the title of "*The Mercury*." He also published the *Travels of Björnstaahl*; and the first volume of the *Historical Library of Sweden*, by Warmholz. He likewise was the translator of some works from the French and the German.—*Ibid.*

GLANDORP (JOHN) a German historiographer, a native of Munster, professor of his-

tory in the university of Marburg. He flourished about the middle of the sixteenth century, and was the friend of Melancthon, whose religious opinions he espoused. His writings consist of "Notes on *Cæsar's Commentaries*;" "*Disticha Sacra et Moralia*;" "*Onomasticon Historiæ Romanæ*;" *Sylvæ Carminum Elegiacorum*;" and accounts of the Antonian and Julian families. His death took place in 1564.—*Moreri.*

GLANVIL (BARTHOLOMEW) a Franciscan friar of the fourteenth century, descended of the noble English family of that name. A few of his sermons were printed by Wynkyn de Worde; and he is also known as the author of an ethical treatise, "*De Proprietatibus Rerum*."—*Dibdin's Typ. Aniq.*

GLANVIL (SIR JOHN) an eminent lawyer and statesman of the seventeenth century, son to a learned English judge of the same name. Having graduated at Oxford he became a member of the society of Lincoln's-inn, and was in due course called to the bar. In 1639 he obtained a sergeant's coif, and holding a seat in parliament was chosen speaker of the House of Commons the year following. His attachment to the court, which was soon after rewarded by the honour of knighthood, rendered him obnoxious to the republican party, who expelled and imprisoned him, nor was he restored to liberty till 1648. On the return of Charles the Second, he recovered his rank as sergeant to the king, but died soon after in 1661. Some of his speeches and reports are yet extant.—*Prince's Worthies of Devon.*

GLEICHEN (FREDERIC WILLIAM VON) a nobleman of Bayreuth in Germany, born in 1714. The earlier part of his life was spent in the army; but becoming weary of the service, at the age of forty-two he threw up his commission, and passed the remainder of his life in literary and scientific pursuits, devoting himself principally to the study of optics, chemistry, and natural philosophy. He was the inventor of what he styled an "universal microscope," and published several ingenious tracts on the minutest operations of nature in the vegetable world. His death took place in 1783.—*Chalmers's Biog. Dict.*

GLEIM (FREDERIC WILLIAM LOUIS) a celebrated poet, called the German Anacreon. He was secretary to the chapter of Halberstadt; and died in 1803, at the age of eighty-four. His songs have all the lightness, grace, and gaiety of the odes of the Teian bard; but it is especially to his war songs, composed for the Prussian army, that he owes his title to a place among the classic authors of Germany. The most valuable of his lyric effusions were the produce of his youth; those which he composed in advanced age being of inferior merit. His writings originally appeared in periodical publications; but his poems were published at Leipsic, 1798, 6 vols; and a complete edition of his works was printed at Halberstadt, 1811—12, 7 vols, 8vo.—*Zopf. Month. Mag. Biog. Univ.*

GNEISENAU (GENERAL NEIDHARD COUNT) a military officer distinguished not only for his

courage, but also as one of the most able and scientific generals of the present age. He was born in 1760, and was a native of Prussia. After a course of attentive study of the sciences connected with his profession, at the age of twenty he entered into the service of the margrave of Anspach, as an officer in a body of troops sent to America as auxiliaries to the British forces employed in the war with the colonists. In 1792 he first became attached to the Prussian army as a subaltern, and served in Silesia. Ten years afterwards he obtained a company; in 1806 he was made a major, and the following year a lieutenant-colonel, when he had the command at Calberg, and defended that fortress against the forces of Buonaparte. He was promoted to the rank of colonel during the siege; but after the treaty of Tilsit, he quitted the army, and was employed in a secret mission to this country. In 1810 he returned to Berlin, and for some time he held a situation in the war office. In 1813 he was appointed major-general and quarter-master-general, in which capacity he commanded in the memorable retreat of the combined forces of Russia and Prussia, from the scene of their defeat by Buonaparte at Lutzen to Breslau. During the ensuing armistice he exerted himself in forming the national militia called the *landwehr*. He was then made chief of the Prussian staff; and he served in the army of Blücher, and is supposed to have greatly contributed to the victories over the French on the Katzbach, at Mooker near Leipsic, and at Brienne, previously to which last action he had attained the rank of lieutenant-general. It is said that it was chiefly in consequence of the advice of this officer that the allies undertook the spirited and successful measure of advancing against Paris. In reward of his numerous services general Gneisenau was raised by the king of Prussia to the dignity of a count, and received a grant of an estate in Silesia, producing an income of more than 10,000 dollars a-year. He gained fresh laurels in the war occasioned by the return of Buonaparte from Elba, and under the command of Blücher he pursued the French to the gates of Paris. He assisted at the subsequent negotiations in the French metropolis; and after the conclusion of peace he was appointed governor of the Prussian provinces on the Rhine. In consequence of the manner in which his name was mentioned by M. Schmalz in his memoirs of the secret societies in Germany, count Gneisenau demanded an inquiry into his conduct, which not being granted, he retired from the service; being permitted however to retain his full pay and choose his future residence. A few years afterwards he was appointed a Prussian field marshal and governor of Berlin. He died at his estate in Silesia, in 1829.—*Month. Mag.*

GODARD (JOHN BAPTIST) superintendent of the Lyceum of Bonn, was a native of the department of Aisne, and died at Paris in 1825, aged fifty. He distinguished himself by his researches into natural history, and was

a principal contributor to *Histoire Naturelle des Lépidoptères, ou Papillons de France*. He was a member of the Linnean Society of Paris, before which captain Villiers read an eulogium of Goddard, December 28, 1825.—*Biog. Univ. Class.*

GODIN (LOUIS) an eminent French mathematician and natural philosopher, who was associated with messieurs Bouguer, Condamine, and Jussieu, in the scientific expedition sent to Peru in 1735, to determine the figure of the earth, from the investigation of the length of a degree of the meridian in the equatorial regions. He became professor of mathematics at Lima, and subsequently director of the academy of Cadiz; and his death took place in 1760. He edited eleven volumes of the *Memoirs of the Academy of Sciences at Paris*; and the *Machines and Inventions* approved by the Academy, 6 vols. 4to.—*Zopf.*

GODWIN, DD. (THOMAS) a distinguished scholar of the seventeenth century, who for some years presided with great reputation over the foundation school at Abingdon, Berks. He was a native of the county of Somerset, born about the year 1587, and took his degrees at Magdalen hall, Oxford. He was the author of a clever work, entitled "*Romane Historiæ Anthologia*," compiled principally for the use of the school; a more elaborate treatise on the ancient Jewish rites and ceremonies; and a "*Synopsis of Hebrew Antiquities*." In 1616 he resigned his situation for the living of Brightwell, which he held till his death in 1643.—*Biog. Brit.*

GODWIN (WILLIAM) parliamentary reporter and writer for the press. He was the son of the celebrated author of "*Caleb Williams*," and the brother of Mrs Shelley; and possessed, as a writer, much of the literary power of his family. His essays in the periodicals to which he contributed, were marked by more than ordinary liveliness and tact; and at the same time showed an extent of observation much beyond what could have been expected from his years and experience. He was tenderly attentive and respectful to his distinguished parent as a son; and he was beloved and esteemed as a companion by a large circle of acquaintance, to whom his invariable candour and command of temper, united with much general information, rendered his society peculiarly acceptable. Mr Godwin was of robust constitution, and the most regular habits. Adhering, by choice, to that rational temperance which has been pronounced an infallible preservative from the cholera, he exhibited a melancholy exception to the general observation, as he died, after a very short illness, of cholera, September 8, 1832, in the twenty-ninth year of his age.—*Ann. Biog.*

GOEKINGK (LEOPOLD FREDERIC GUNTHER von) an ingenious and popular German poet who was born in the territory of Halberstadt in 1748. He was educated at Halle, and in the course of his life he occupied some important posts in the service of the king of Prussia. In 1777 he published "*Songs of*

two Lovers," which procured him high reputation; and he likewise wrote various songs, epigrams, and epistles. His works have gone through many editions, and their merit has secured him an honourable place among the poets of his country. His writings breathe the spirit of sympathetic feeling and benevolence indicative of his natural disposition; and he was not only the friend of Burger, Gleim, Jacobi, and others of his talented contemporaries, but he was also beloved by all who knew him. His death took place February 18, 1828. He wrote pieces of a satirical description in prose, which display his talents to advantage, and show him to have been a successful imitator of Rabener. Besides the works already noticed, he published various articles in literary journals. He likewise edited the "Göttingen Musen-almanack," 1776—78; and the "Tagebuch von und für Deutschland," 1784, &c. He was twice married: his first wife, of the family of Vogler, who died in 1781, was a very accomplished woman, the Nantchen of the "Lieder zweier Liebenden"—Songs of two Lovers, deservedly honoured with a distinguished place among the poetesses of Germany.—*Encycl. Amer. For. Rev.*

GOETHE or GOTHE (JOHN WOLFGANG von) was born at Frankfort on the Maine, August 28, 1749. Like his illustrious coeval Bentham, he was a sickly child, and consequently participated but little in the pastimes of childhood. Habits of reflection and independence on others for amusement or for intellectual culture were thus generated, which operating on his exquisite organization contributed to make him the master-spirit of his age. In the interesting account he gives of himself, in his autobiography and diary, it is to the highest degree instructive to mark the effect produced by the various circumstances in which he was placed on his trains of thought. Events, which, in most children's minds, "are only reflected as on looking-glasses, but make no impression," produced an effect on him of which the influence was never effaced. The coronation of Joseph II at Frankfort, the annual mass, and the noble old city itself, with its associations of feudalism and German art, are portrayed by him after a lapse of seventy years, with all the vividness of yesterday's impressions. It is probable that no one ever possessed such acute sensibility as Goethe. His father was a man of easy circumstances, and of some literary ability. He had travelled in Italy, had a great love for the fine arts; and had made a small collection of what Italians call objects of virtù. All this worked on the mind of the young poet, and at eight or nine years of age, he wrote a short description of twelve pictures portraying the history of Joseph. At fifteen he went to the university of Leipsic, where the lectures of Ernesti and Gellert presented more attraction than the dry philosophy of the pedant Gottsched. In 1768, he quitted Leipsic, and after a short tour settled for some short time in Alsace, where the beautiful

Gretchen won his heart, and obtained for herself in Faust and Egmont, a more lasting monument than marble or brass could have afforded. On leaving Alsace, he returned home; but soon quitted it again, on a visit to Weimar, where another love affair gave birth to his romance of "Werther," in which he incorporated the Suicide of Young Jerusalem. (See DICT.) In 1775 he went to Weimar, on an invitation from the grand duke, whom he had met in travelling; and there he remained till the close of his life, loaded with all the honours a German sovereign could bestow,—ennobled, a privy councillor, and for many years prime minister. Such rewards of genius, hitherto unknown in the annals of literature, constitute a most splendid, if not an unique exception to the indifference with which rulers generally treat intellectual excellence. Goethe's first appearance in print was in short articles in the annuals and literary journals. But his "Götz of the Iron Hand," published with his name in 1773; and his "Werther," in the year after, called at once the attention of his countrymen to the young master-mind. Never, probably, did two works produce such instantaneous effect on the literature of a country. For more than a year after Götz was published, imitations by the multitudinous crowd of second-rate writers flowed in unceasing abundance from the German press. Götz and the Middle Ages were only put to flight by the Young Werther, which produced still more imitations, and for a still longer period; until Goethe himself, by his wit, his irony, and his eloquence, put an end to the sickly sentimentalism, which he had first called into action. Götz and Werther alone survive the creations of which they formed the nucleus; and he is not to be envied who cannot derive pleasure from the perusal of each. Such a production as the first indeed, by a young man only twenty-three years of age, at once placed Goethe at the head of his country's literature, a station which he preserved, undisturbed by rival claims, to the hour of his death. His mind indeed seems never to have grown old, but to have presented a new phase at each stage of his existence. Having breathed forth his feelings, in every species of poetry, he loved to exercise his powerful faculties with the abstrusest problems in science,—with the same pleasure, no doubt, (as Hume remarks,) that men of great muscular power seek occasions for exertion. Comparative anatomy, geology, botany, the theory of light and colours, &c. were all studied by him with unwearied attention, and most of them were made the subjects of his publications. To all these qualities of mind and varied acquisitions, Goethe joined a most courteous and affable bearing. Although his, and his friend Schiller's "Xenien" kept all the literary pretenders of Germany in fear and trembling, he never evinced the slightest jealousy of literary merit. Of this a complete testimony is afforded by his correspondence with Schiller, which affords a rare instance of the cordiality and intimacy with which two

great writers laid themselves open to one another. The grandeur of Goethe's intellect is only vividly set forth in this correspondence, through which we may observe Schiller's noble mind

"Contending with low wants and lofty will,"

and cowering before the superiority of his friend. It may add to the interest attending Goethe to know that he was as richly gifted in person as in mind, and that, in the words of a native of Weimar, "his eyes were like two lights." Only one thing in Goethe we may regret, that he was no politician; but this the character of his mind forbade. A chilling scepticism, as to the progressive improvement of man, runs through all his writings, and of course prevented all attempts to make human institutions more productive of human happiness. The death of Goethe seems in a manner to mark the close of a social era, and to sever one of the latest links between the past and the present. His name has long been associated with the impression of a mighty moral influence over European society; and the moment when that influence has for ever ceased to be personal, suggests inquiry what was its mode and character. Some have made an epoch in intellectual history by publishing a new revelation in morals or religion; others by addressing themselves to patriotic impulses; while others again have been followed as the guiding lights of philosophy, or of practical or scientific culture. None of all these influences was preeminently exerted by Goethe, though his enthusiastic admirers have claimed for him the praise of embracing and wielding all. His muse was neither that of devotion, philosophy, or patriotism, though flowers from each and all these fields have been culled to grace his poetical wreath; and a future age will edify or amuse itself with the spectacle of one who was an intellectual giant in his generation, yet indulged himself in a sort of semi-sceptical abstraction from all the mystic influences which have given prophets and poets their empire. During the last two years of his life, and particularly after the death of his son, his spirit lost its energy, and he was but the shadow of that which he once had been. To his daughter-in-law he was indebted for that tenderness and assiduity which soothed his declining years. He retained his faculties to the last, and his death took place at Weimar, March 22, 1832. He expired, without any apparent suffering, in his arm chair, having a few minutes previously called for paper for the purpose of writing, and expressed his delight at the approach of spring. Though more than eighty years of age he still meditated literary projects, and talked of completing his "Faust," and of executing other elaborate works, with as much confidence as if he was in the vigour of his youth and genius. Few men, in the walk where Goethe shone so conspicuously, enjoyed more happiness than he did. His superiority no one attempted to dispute. He maintained a

tranquil empire over the literature of his country, which was implicitly acquiesced in by every candidate for literary fame. In his intercourse with the world, Goethe acted as a man of practical good sense: his enthusiasm and romanticism he reserved entirely for his productions. He lived to see his name universally worshipped; and upon Weimar, the place of his residence, he has conferred an undying interest. The death of Goethe cannot be regarded as an event of importance merely to the literary world; it marks distinctly the termination of one era, and the commencement of another. He may be said to have expired with the literary age of his country, at the instant almost when its political existence began. Goethe appointed Dr Eckermann, of Hanover, who assisted him in preparing the last edition of his works, to be the editor of the unpublished MSS. which he left. Among the finished MSS. is an entire volume of his own life, which follows in order the third volume of "Dichtung und Wahrheit." It contains the account of his first appearance at Weimar, and of the early years of his life and literary labours in that town, a period in which some of his finest works were composed. This volume nearly fills up the interval till his visit to Italy. We may also expect an entire volume of new poems, and the original MS. of "Gotz von Berlichingen," which is said to differ very materially from the published play. Besides these, among many other precious relics, there is the second part of "Faust," complete in five acts, the last two acts of which were composed in inverse order; the fifth in the winter of 1830—1831, immediately after the receipt of the dreadful news of the death of his only son, which had nearly proved fatal to him. The classico-romantic phantasmagoria, "Helena," (which has been long known,) forms the third act, as a kind of interlude. Among the collections of his letters, a whole volume will be published of his correspondence with his friend the musician Zelter, in Berlin, more interesting even than that with Schiller. The mortal remains of Goethe were deposited, on the 26th of March, with great pomp, in the grand ducal family vault at Weimar, near to those of Schiller. On the same day the theatre, which had been closed out of respect to his memory, was opened with the representation of his "Tasso." The writings of Goethe are by far too voluminous to be here enumerated. Among the more remarkable of his productions not already mentioned are "Wilhelm Meisters Lehrjahre"—William Meister's Apprenticeship, an ethic fiction; "Wilhelm Meisters Wanderjahre," a sequel to the preceding; "Herman and Dorothea;" "Iphigenia in Tauris," a tragedy; various dramatic pieces, ballads, poetical epistles, and epigrams; and a miscellany on literature and the fine arts, entitled "Über Kunst und Alterthum am Rhein und Mayn, mit einem Nachbilde der Vera Icon Byzantinisch-Neiderrheinisch," Stuttgart, 1818—1822, 3 vols. "Goethe has been called the German

Voltaire, but it is a name which does him wrong, and describes him ill. Except in the corresponding variety of their pursuits and knowledge, in which perhaps it does Voltaire wrong, the two cannot be compared. In the virtual extent and effect of his multifarious labours upon his fellow-creatures, possibly no single individual can be compared to Voltaire; and if such be one of the constituent elements of intellectual greatness, he was indisputably a great man. In essential originality and abstract mental power, Goethe was essentially the superior. When Goethe has been dead so long as Voltaire, however, the question will be more easy of solution than at present.—*Coriale's Specimens of German Romance. New Month. Mag. Meusel.*

GOETZE or GOTZE (JOHN AUGUSTUS EPHRAIM) an eminent German naturalist, who was pastor of a church at Quedlinbourg. He was the author of several works on natural history, among which may be mentioned a "History of Intestine Verms," 4to, and an "European Fauna," 9 vols, 8vo. He died in 1793.—GORTZ (JOHN MELCHIOR) brother of the preceding, a famous preacher at Hamburg, who became the Coryphæus of the orthodox party among the protestants of Germany. He published a great many works, in the German language, on theological and devotional subjects, the former including many polemical pieces controverting the opinions of Semler, Lessing, Bahrdt, and other latitudinarian writers. He died in 1786.—*Zopf. Meusel.*

GOICOECHEA (JOSEPH ANTHONY DE LIEUDOR) a Franciscan friar, born at Carthagena in America, who became professor of philosophy and theology in the university of Guatemala, and had the honour of importing and naturalizing in his own country a number of valuable inventions and discoveries. He founded the Economical Society of Guatemala, and he published a number of memoirs on botany, agriculture, and the prevention of mendicity; besides sermons, and an eloquent address to Charles IV in favour of the Indians. This public-spirited and enlightened ecclesiastic died in 1814.—*Biog. Univ. Class.*

GOLBERY (SYLVAIN MEINRAD XAVIER) a French officer, born at Colmar in 1742. He was made librarian of the Royal Hotel of Invalids in 1818, and having retired from the army with the rank of lieutenant-colonel, he died in 1822. He published "Lettre sur l'Afrique," Paris, 1791, 8vo; "Fragmens d'un Voyage en Afrique, fait pendant les Années 1785, 1786, et 1787. &c." 1802, 2 vols, 8vo, translated into English by F. W. Blagdon, 1802, 2 vols, 18mo, and by W. Mudford, 1803, 2 vols, 12mo, and also into German; and "Considérations sur le Département de la Roer, suivies de la Notice d'Aix-la-Chapelle et de Borsette, &c." Aix-la-Chapelle, 1811, 8vo.—*Ibid.*

GONZALO of Berceo, a Spanish poet, so called from the place of his nativity, Berceo in Guipuscoa. He was a monk of the Bene-

dictine convent of San Milan, who is supposed to have flourished about 1240, or towards the beginning of the reign of San Fernando. He wrote poems on the Signs of the Day of Judgment, the Tears and Sorrows of our Lady, and the Lives of San Milan. and San Domingo de Silos; in which he is said to have displayed more devotion than poetic spirit. But there is another of his productions, on the Battle of Simancas—where the Moors were vanquished by Ramirez II king of Navarre, which must be interesting from the nature of the subject, but unfortunately it only exists in manuscript.—*Mavry. Espagne Poetique. For. Rev.*

GOOCH (BENJAMIN) an eminent English surgeon, who practised in his profession at Shottisham in Norfolk. He published in 1758 "Cases and Remarks in Surgery," 8vo, of which a second edition, in two volumes, appeared in 1769. He was also the author of a treatise "On Wounds and other Chirurgical Subjects," with an Account of the Rise and Progress of Surgery and Anatomy," 2 vols, 8vo, besides other tracts. His writings are esteemed by professional men as resulting from practical observation; and they were reprinted collectively under the title of "The Chirurgical Works of Benjamin Gooch," 1792, 3 vols, 8vo.—*Edit.*

GOOD (JOHN MASON) a physician, poet, and philological writer of eminence, who was the son of a dissenting minister, and was born at Epping in Essex in 1764. He was apprenticed to a surgeon at Gosport, and engaged in practice at Coggeshall in his native county. In 1793 he removed to London, where he carried on business for several years as a surgeon and apothecary. In 1810, and the two following years, he delivered physiological lectures at the Surrey Institution, which were afterwards published. Having obtained a diploma from the university of Aberdeen, he commenced physician in 1820, and continued to practise in that capacity till his death, January 2, 1827. His principal works are, "Memoirs of the Life and Writings of Dr Alexander Geddes," 1803, 8vo; translations of Solomon's Song and the Book of Job; a translation of Lucretius, On the Nature of Things, 1805, 2 vols, 4to; "Medical Technology," 1810, 8vo; "A Physiological System of Nosology," 1817, 8vo; and "The Study of Medicine," 1823, 4 vols, 8vo.—*Gregory's Memoirs of Dr Good.*

GOROUCHIN (—) a Russian lawyer, born in 1747, died in 1821, at Moscow, where he held the situation of professor of practical jurisprudence. He was the author of "A Manual of Russian Legislation," Moscow, 1811, 4 vols; and "A Description of Judicial Actions," 1812, 3 vols, 4to.—*Biog. Univ. Class.*

GOSSEC (FRANCIS JOSEPH) a celebrated musical composer of the French school. He was born at Verguier, a village in Hainault, January 17, 1733; and at the age of seven he was sent to Antwerp, where he remained eight years as a singing boy in the cathedral. In 1751 he was engaged by M. de

la Popliniere, whose orchestra he conducted under the direction of Rameau; and subsequently he became leader of the band of the Prince de Condé, for which he composed several operas. In 1770 he founded the Concert of Amateurs, where the Chevalier de St George was first violin; in 1773 he undertook the management of the Concerts of Sacred Music; and 1784 he was appointed superintendent or chief professor of the royal school of singing and declamation, founded by M. le Baron de Breteuil. He was a warm partisan of the French revolution, after the commencement of which he held the office of Master of the band of the National Guard, when he composed several symphonies and other musical pieces for wind instruments, to be performed on public occasions. On the establishment of a Conservatory of Music at Paris in 1795, he was chosen Inspector of Instruction, and Professor of Composition to the Institution, conjointly with Mehul and Cherubini. During the progress of the revolution Gossec composed two operas which had great success, "The Recapture of Toulon," and "The Camp of Grandpré." The composition of the "Marseilloise Hymn," which was introduced into the latter, has been generally attributed to him, but it is said that in fact Rouget de Lisle was the author of the air, which Gossec arranged with accompaniments for a full orchestral chorus. He also composed the music for the Apotheoses of Voltaire and Jean Jacques Rousseau, for the funeral of Mirabeau, and for the funeral hymn in honour of the French ministers who were assassinated at Rastadt. He was the author of "The Elementary Principles of Music," published by the Conservatory in two volumes, folio; and of numerous solfeggi which are inserted in the book of instruction for singing used in that establishment. To a very advanced age he retained, in his conversation and occasionally in his compositions, all the spirit and buoyancy of youth. At the age of seventy-eight he composed a Te Deum, instead of one which he had produced early in life, but which had been lost in consequence of the manuscripts and plates having been stolen; at eighty-one he continued to lecture on composition at the conservatory; and when he was ninety he frequently used to spend part of his evenings at the theatre Feydeau. He died at Passy, February 16th, 1829. He was a member of the Institute, and of the Legion of Honour. Gossec's music is light, pleasing, and spirited, occasionally evincing fire and even grandeur, especially in his patriotic compositions. He never enjoyed the advantages of a regular course of instruction, nor had he been able to avail himself of a journey to Italy, yet he was intimately conversant with the style of the Italian and also of the German masters. His productions, consisting of music for the church, the chamber, and the theatre, are very numerous.—*Biog. Dict. of Mus. Month. Mag.*

GOSSELIN (PASCAL FRANCIS JOSEPH) a learned French geographer, who was born at

Lille, in the Netherlands, September 6, 1751. He travelled through various countries of Europe between the years 1772 and 1780, and engaged in many researches concerning ancient geography. In 1789 he was sent as a deputy from his province to the National Assembly, when he produced a scientific memoir on the question proposed by the Royal Academy, "Où Strabon et Ptolémée avaient trouvé et porté les Connaissances Géographiques," which procured him admission into that institution. The king, in 1791, nominated him a member of the central administration of commerce, which office he held till the suppression of the board in 1792. A decree of the Committee of Public Safety in 1794 conferred on him an important charge in the war department; and the result of the researches which he then had occasion to undertake was printed in 1796, by order of the Committee of Public Instruction. In 1801 the government appointed him one of the conductors of the new edition of Strabo. He was made an officer of the Legion of Honour; was subsequently appointed Keeper of the King's Library and Cabinet of Medals, &c. at Paris; and he was an associate of the Academy of Sciences at Gottingen, and a member of the French Academy of Inscriptions and Belles Lettres. He died in 1830. M. Gosselin, besides other works, was the author of "Géographie des Grecs analysée," Paris, 1796, 4to; and "Recherches sur la Géographie systématique et positive des Anciens," 1798, 2 vols, 4to.—*Biog. Nouv. des Contemp. Edit.*

GOTTER (FREDERICK WILLIAM) an eminent poetical writer and translator, who held the office of Archivist of Gotha. He wrote epistles in verse, songs, and other small poems, tragedies, and an opera. His dramatic compositions are imitations of the Greek, French, and English writers, but executed with so much success that they may claim the praise of originals. His works have been published collectively, in 3 vols, 8vo. He died in 1797.—*Zopf. Meusel.*

GOTTI (VINCENT LOUIS) a Dominican friar, who was made a cardinal, and distinguished himself by his theological writings; among which are "Colloquia Scholasticodogmatica;" "Colloquia Theologico-polemica;" and a Treatise on the Truth of the Christian Religion. He died in 1741.—*Biog. Univ.*

GOUVION ST CYR (GENERAL LAWRENT marquis de) a French military officer, who commenced his career in the service of the Republic. He distinguished himself on many occasions in the army of the Rhine during the campaign of 1795, but it was in 1796 that his conduct attracted particular attention, and General Moreau ascribed to him a part of his success. In the battle of Deux-Ponts, June 15th, he commanded the left wing of the French army, and took Holtzhof. Being charged with the command of the centre of the army at the battles of Rastadt, the 6th and the 9th of July, he displayed

equal bravery and skill, and divided the glory of those important days with Dessaix, and the commander in chief. During the remainder of the campaign he gave many fresh proofs of his abilities, and he continued to serve with the same success during the skilful retreat of Moreau. Subsequently he was employed in some diplomatic missions, but being recalled to the army he served in Italy in 1799; and in 1800 he commanded the centre of the army of the Rhine. In 1804 he was made colonel-general of the Cuirassiers, and grand officer of the Legion of Honour; in 1805, when serving under Massena, he captured six thousand Austrians, commanded by Jellachich and Rohan. In 1806 he was ordered to take possession of the kingdom of Naples; and he afterwards joined the grand army in Prussia, and was made governor of Warsaw. He was employed during the invasion of Spain by the French, when he obtained considerable success in Catalonia. He was also engaged in the disastrous campaign of Buonaparte in Russia; and Marshal Oudinot having been wounded, he succeeded him in the command of the central army; and for his services in that station he was raised to the rank of marshal. At the battle of Dresden he greatly distinguished himself, and soon afterwards he defeated Count Tolstoy at Plauen. His last military command was at Dresden, where he was left with a garrison of 16,000 men, but circumstances after a time compelled him to surrender the place. Returning to France after the restoration of the Bourbons, he was created a peer, and made a commander of the order of St Louis. He continued faithful to the royal cause during the retreat of the king to Ghent, and on his return he was made temporary minister of war, and loaded with honours. In 1817 he was appointed minister for naval affairs, and soon afterwards he was removed to the presidency of the war department. His death took place at Hieres, near Toulon, in March 1830.—*Month. Mag.*

GRAHAM (WILLIAM GRENVILLE) an ingenious but imprudent public writer, who was a native of the United States of North America. He came to England when young, having clandestinely quitted his friends, who were persons of respectability, in consequence of his own caprice or ill conduct. He appears to have received a tolerably good education, and possessed considerable abilities, from the exercise of which he expected to be able to support himself in London. In this respect he was disappointed, and being taken ill was found in circumstances of great distress by Mr Burdon, a gentleman of fortune, and a successful cultivator of literature. To this benevolent individual Graham was indebted for present relief, and the means of future advancement and support. In 1814 he entered as a student at the Temple at the expense of his patron, who subsequently sent him to Cambridge University, with an allowance of 300*l.* a-year. Though he appears at this period to have indulged in habits of dissipa-

tion which afterwards proved his ruin, yet he by no means neglected his studies. About the end of 1817 he left Cambridge, and paid a visit to Paris, with the consent of Mr Burdon, whom on his return to London he found in a very ill state of health, and who on his death, in May 1818, left him an annuity nearly equal to what he had previously allowed him. This he sold, and letting his chambers in the Temple, he went again to the continent. He visited France, Switzerland, Italy, Germany, and the Netherlands, and became acquainted with many distinguished literary men, adding greatly to his stores of general information and knowledge of the world; but he indulged in various excesses, and particularly in gaming, so that when he returned to London, in 1821, he found himself in such circumstances as obliged him to look out for immediate employment. He experienced some difficulties before he could attain this object. At length he became translator and literary assistant to the celebrated Ugo Foscolo, and made some addition to his income by writing for the magazines. His connection with Foscolo terminated in a violent quarrel; and he afterwards engaged in the office of reporter to the newspapers. He also attended the theatres, wrote literary criticisms, and after a time undertook the editorship of the "Weekly Museum." From these sources he is said to have gained more than 600*l.* a-year; but such was his extravagance that he became embarrassed in circumstances. At last he was induced to commit forgery, and on the discovery of his crime he fled to Liverpool from the pursuit of justice, and succeeded in escaping to New York in the spring of 1827. Shortly after his arrival in his native country he was killed in a duel, leaving behind him a sad example of misemployed talents.—*Month. Mag.*

GRANT (—) a lady distinguished for her literary abilities, usually designated Mrs Grant of Laggan. She was the daughter of a military officer named Campbell, and she was born at Glasgow, about 1756. While an infant she was taken to America by her father, who was for a considerable time stationed at a fort in the interior of the country, among the Mohawk Indians. Captain Campbell having quitted the service, returned with his wife and daughter to Scotland about 1768; and in 1773 he obtained a kind of half military appointment at Fort Augustus. There Miss Campbell principally resided till 1779, when she was married to the Rev. Mr Grant, minister of Laggan, by whose death, in 1801, she was left a widow, with a numerous family. The necessity of providing for her orphan children prompted her to become an authoress. Her earliest publication consisted of poetry; and in 1803 she produced "The Highlanders, and other Poems." Subsequently appeared "Memoirs of an American Lady, with Sketches of Manners and Scenery in America," 1808, 2 vols, 12mo; "Letters from the Mountains, being the real Correspondence of a Lady between the Years 1773

and 1803," 3 vols, 12mo; and "Essays on the Superstitions of the Highlanders of Scotland, to which are added Translations from the Gaelic, and Letters connected with those formerly published," 1811, 2 vols, 12mo. Dr Scheel in his "Tour through Great Britain," says: "This lady is called Mrs Grant of Laggan, after an old monastery in the Highlands, where she long resided. The distinction is not superfluous, for in all probability there are upwards of five thousand of the name. From the before-mentioned place she wrote her 'Letters from the Mountains,' a little work of the highest rank in female literature. What there is feminine in it is grace and goodness, but it is masculine in accuracy of judgment and profundity of thought; and the style is so good that the writings of very few now living British authors, whether male or female, can be compared to it. This work is a perfect mirror of the lady's own mind, and of her daily conversation—benevolent, instructive, amusing, reflecting, pious, and withal liberal. Though she is now past seventy, her society is, even by youth and fashion, preferred to that which their own resources afford."—*Biog. Dict. of Living Authors*.

GRANT (SIR WILLIAM) an eminent lawyer, was descended from the Grants of Beldornie, so long distinguished in the history of Scotland. He was born in 1754, at Elchies, on the banks of the Spey, in the county of Elgin, and was partly educated in the grammar school of Elgin, from which he removed to the old college of Aberdeen, where he completed his education, and then repaired to London, and entered at Lincoln's-inn, where he pursued the study of the law. His whole mind was engrossed in the endeavour to obtain a knowledge of his profession, and of the various business of life; and so successful were his efforts that at the age of twenty-five he was considered competent to fill the situation of attorney-general of Canada, to which he was appointed, and he quitted this country without having been called to the bar. On his return to England he engaged in practice in the courts of common law, and joined the home circuit. Being naturally of a reserved and retired turn, he travelled the circuit for several years without obtaining a single brief; but happening to be retained in some appeals from the court of session in Scotland to the House of Lords, Lord Chancellor Thurlow was much struck with his powers of argument; and having learned his name, observed to a friend, "Be not surprised if that young man should one day occupy this seat." That this prophetic opinion was not exactly fulfilled has been attributed to his having refused that high office. He subsequently left the common law bar, and practised solely in the Court of Chancery. At the general election in 1790 Mr Grant was returned to parliament for the borough of Shaftesbury, and soon distinguished himself as a powerful coadjutor of Mr Pitt. He seldom spoke, and never but on questions

with which he was fully acquainted; but his talents and intelligence were soon so generally recognised as to render his assistance essentially valuable. On one occasion in particular, in which the question for a new code of laws for the North American colonies excited much discussion, Mr Grant's local information and his great professional skill, particularly in the civil law, powerfully strengthened his reasoning; and it was then that the celebrated Mr Fox, after warmly complimenting him, saluted him as one of his most formidable antagonists. It was in 1791 that he thus distinguished himself in a debate relating to the laws of Canada; and in 1792 he made a most able, acute, and argumentative speech in defence of the ministry, on the subject of the Russia armament. He was called within the bar, with a patent of precedence, in 1793; and in the same year was appointed a Welsh judge, when a new writ was ordered for Shaftesbury on the 20th of June, and he was not re-chosen. However, a vacancy for Windsor happening in the following January, he was elected for that borough; he was at that time solicitor-general to the queen. In 1796 he was chosen knight of the shire for the Scottish county of Banff. In 1798 he was appointed Chief Justice of Chester; in 1799 he succeeded Lord Redesdale as Solicitor General, and as is usual obtained the honour of knighthood on his promotion; and on the 20th of May, 1801, in consequence of the elevation of Sir Pepper Arden to the Chief Justiceship of the Common Pleas, he was nominated Master of the Rolls. In 1802 Sir W. Grant made a speech in parliament in favour of the definitive treaty of peace with France. In February 1805 he supported the address to the crown in defence of the war with Spain; and in the course of the same year he opposed Mr Whitbread's proceedings against Lord Melville, and the subsequent motion for the impeachment of that nobleman for his conduct while treasurer of the navy. He opposed the American intercourse bill in 1806, and received the thanks of a committee of merchants of the city of London, for his conduct on that occasion. In 1807 he animadverted at some length on the bill brought into the House of Commons by Sir Samuel Romilly, the object of which was to alter the law as to the claims of creditors on the landed property of their debtors. Sir W. Grant continued to represent the shire of Banff till the dissolution of parliament in 1812. During a period of more than sixteen years did he fill the judicial chair in the Rolls Court with undiminished ability and reputation. At length he became anxious to retire while yet in the full possession of his faculties. This purpose he carried into effect towards the close of 1817. During the last two years of his life he lived chiefly at Barton House, Dawlish, the residence of his sister, the widow of Admiral Schanck; and at that place he died May 25, 1832. Sir W. Grant is spoken of in Mr Charles Butler's "Remi-

niscences" in the following terms:—"The most perfect model of judicial eloquence which has come under the observation of the reminiscent is that of Sir William Grant. In hearing him it was impossible not to think of the character given of Menelaus by Homer, or rather by Pope, that

'He spoke no more than just the thing he ought.'

"But Sir William *did* much more:—in de-compounding and analyzing an immense mass of confused and contradictory matter, and forming clear and unquestionable results, the insight of his mind was infinite. His exposition of facts, and of the consequences deducible from them, his discussion of former decisions, and showing their legitimate weight and authority, and their real bearing upon the point in question, were above praise; but the whole was done with such admirable ease and simplicity that while real judges felt its supreme excellence, the herd of learners believed that they should have done the same. Never was the merit of Dr Johnson's definition of a perfect style, 'proper words in proper places,' more sensibly felt than it was by those who listened to Sir William Grant. The charm of it was indescribable; its effect on the hearers was that which Milton describes when he paints Adam listening to the angel after the angel had ceased to speak; often and often has the reminiscent beheld the bar listening, at the close of a judgment given by Sir William, with the same feeling of admiration at what they had heard, and the same regret that it was heard no more."—*Wilson's Biographical Index to the House of Commons*, 1808. *Annual Biography*, 1832.

GRASSET DE SAINT SAUVEUR (JACQUES) a French writer, born at Montreal, in Canada, in 1757. He went to France, and studied at Paris, after which he became vice-consul in Hungary, and in the Levant. His death took place at Paris in 1810. Among his numerous publications may be specified "Tableau Cosmographique de l'Europe, l'Asie, l'Afrique, et l'Amérique," 1787, 4to; "L'Antique Rome, ou Descript. Hist. et Pittor. &c." 1795, 4to; and "Encyclopédie des Voyages," 1795—96, 5 vols, 4to.—*Biog. Univ.*

GREATOREX (THOMAS) a distinguished musician, organist of Westminster Abbey, and conductor of his majesty's concerts of ancient music. He was born at North Winfield, near Chesterfield, in Derbyshire, October 5, 1758. He came to London in 1772, and became a pupil of Dr Cooke. From 1774 to 1776 he assisted at the Christmas oratorios given by lord Sandwich, at Hinchinbrook, and there had an opportunity of studying the music of Handel; and he also formed a friendship with Joah Bates, who conducted those performances. At the establishment of the ancient concerts in 1776, he assisted in the chorusses, and continued to perform there till 1780, when he accepted the office of organist in the cathedral of Carlisle. After a few years he resigned this situation, and went to Italy, where he studied vocal music, especially un-

der the famous singer Santarelli, at Rome. He afterwards went to Naples, Florence, Venice, and other Italian cities; and having passed through Switzerland, Germany, the Flemish, and Dutch Netherlands, he returned home towards the end of the year 1788. He now established himself in London as a teacher of music, and obtained so much reputation as to acquire an income of more than 2000*l.* a-year. In 1793 he succeeded Mr Bates as conductor of his majesty's concerts of ancient music, in 1801 he contributed to the restoration of the vocal concerts, and in 1819 he obtained the situation formerly held by Dr Cooke, as organist and master of the singing boys at Westminster Abbey. Mr. Greatorex died at Hampton, July 18, 1831; and on the 25th of the same month he was interred in Westminster Abbey. Music was only one of his pursuits, his mind being directed to other objects, particularly mathematics and astronomy; and had he devoted himself to music alone there is reason to believe that he would have excelled not only as a performer but also as a composer. He harmonized various airs, and arranged parts for the grand orchestra with great ability. And his adaptations of many of Handel's productions have been published. He left manuscript papers on chemistry and botany; and during an excursion to the British lakes, in 1817, he made some important observations and experiments on a mode of measuring the altitude of mountains by means of the barometer. His experiments formed the subject of a paper published in the *Philosophical Transactions*; and he was subsequently chosen a fellow of the Royal Society.—*Ann. Biog.*

GREGORIE (HENRY count) a French ecclesiastic, constitutional bishop of Blois, distinguished in his civil, religious, and literary career, for active philanthropy, inflexible integrity, and ardent piety. He was born December 4, 1750, at Vatro near Luneville. In 1772 his "Eloge de la Poésie" was crowned by the Academy of Nanci; and in 1778 he published "Essai sur l'Amélioration politique, physique, et morale des Juifs," which was equally honoured by the Academy of Metz, and which has been translated into English. In 1789 he was nominated by the clergy of his province a member of the states-general; and he was one of the five ecclesiastics present at the famous session, in the tennis-court at Versailles. In the constituent assembly he distinguished himself by the boldness of his opinions relative to civil and religious liberty, and the eloquence with which he supported them. He was an ardent advocate for the liberty and rights of the Negroes as well as the Jews. He appeared as one of the first of the clergy who swore fidelity to the constitution. In the convention Gregorie was in favour of the suppression of the regal office, but he endeavoured to save the life of the king by a general proposition for abolishing the punishment of death. During the reign of terror, when the bishop of Paris abdicated his office, and several of the clergy ab-

jured christianity, the bishop of Blois stood forward as the supporter of the religion of his country, undaunted by the dangers by which he was surrounded. At a later period, in the senate, he formed one of a minority of five opposed to the accession of the first consul to the throne of France; and he alone objected to the obsequious address of that body to the new sovereign. In 1814 he signed the act for deposing the emperor; and in 1815, as a member of the institute, he refused to sign the "Additional Act." On the restoration of the Bourbons he was excluded from the institute, and deprived of his bishopric; and being chosen a member of the chamber of deputies in 1819, he was prevented from retaining his seat by the royalists. He spent the remaining part of his life in retirement, and died at Paris, in 1831. Among his numerous writings are "Mémoire en faveur des Gens de Couleur ou Sang-mêlés de St Domingue," Paris, 1789, 8vo; a discourse before the national convention "Sur la Liberté des Cutes," 1797; "De la Littérature des Nègres," 8vo; "Essai Historique sur les Libertés de l'Eglise Gallicane," 1818, 8vo; "Les Ruines de Port Royal;" and "Traité de l'Esclavage des Noirs et des Blancs, par un Ami des Hommes de toutes les Couleurs."—*Biog. Nouv. des Contemp. Encycl. Amer.*

GRENVILLE (GEORGE) an English statesman in the last century. He was younger brother of Richard Grenville, earl Temple, and member of parliament for the county of Buckingham. After having successively filled the situations of treasurer of the navy, first lord of the admiralty, and first lord of the treasury, he became chancellor of the exchequer in 1763. Two years after he resigned his post to the marquis of Rockingham; and being violently attacked from the press, he published in 1766 a vindication of his ministry, entitled "Considerations on the Commerce and Finances of England, and on the Measures taken by the Ministry from the Conclusion of the Peace, relative to the great Objects of National Interest;" a pamphlet called "The Present State of the Nation," 1768, was also ascribed to him. He died in 1770, leaving by his lady, the daughter of sir W. Wyndham, the late marquis of Buckingham and lord Grenville.—*Biog. Univ. Biog. Peerage.*

GRIFPET (HENRY) a learned French jesuit, who distinguished himself by his writings on theology and history. He was a native of Moulins, became preacher to the king, and died in 1775. Among his works may be mentioned "Année du Chrétien," 18 vols, 8vo; Sermons, 4 vols, 12mo; "Exercice de Piété, pour la Communion," 12mo; "Histoire du Règne de Louis XIII." 1758, 3 vols, 4to; and a valuable tract on the Truth of History.—*Zopf. Biog. Univ.*

GRIMSTON (SIR HARBOTTLE) an eminent lawyer, of the time of the Commonwealth, born in 1594, at Bradfield-hall, the family seat, in the county of Essex. Having been called to the bar he soon acquired a consider-

able reputation in his profession, and took his seat in parliament in 1640, as member for Colchester, of which borough he had two years previously been chosen recorder. Though in the outset of his career opposed to the court, he was far from approving the lengths to which matters were carried by the opposite party, and after the death of Charles quitted England for the continent. He was subsequently one of those who waited on the young king at Breda, and was appointed master of the rolls soon after his restoration. Sir Harbottle was son-in-law to sir George Croke, and edited his reports. His death took place in 1683.—*Biog. Brit.*

GRISAUNT (WILLIAM) a physician, mathematician, and astronomer of the fourteenth century. He studied at Merton college, Oxford, where he acquired the imputation of being acquainted with the occult sciences, on which account he removed to France and devoted himself entirely to the study of medicine, at Montpellier and afterwards at Marseilles. In the latter city he fixed his residence as a medical practitioner, and rose to great eminence in his profession. The time of his death is not known, but it appears that he was an old man in 1349, and that he had a son, who was an ecclesiastic, and who is said to have arrived at the pontificate, when he took the name of Urban V. Among several treatises composed by this physician, may be mentioned those entitled "De Qualitatibus Astrorum;" "De Motu Capitis;" and "De Urina non visa."—*Aikin's Biographical Memoirs of Medicine.*

GRIVE (JOHN de la) a native of Sedan, born in 1689. He was a good mathematical scholar, and distinguished himself as a topographer by engraving a plan of Paris, and the course of the river Seine, from a survey of his own. He also published "A Manual of Spherical Trigonometry;" "A Description of the Environs of Paris;" an "Account of the Royal Domains in the Vicinity of the Metropolis;" and a description of the gardens of Marli. Cassini was indebted to him for some assistance in drawing a meridian line. His death took place in 1757.—*Moreri.*

GROCYN (WILLIAM) a distinguished classical scholar, one of the great restorers of learning in the fifteenth century. He was born at Bristol, in 1442, and was educated at Winchester school and New college, Oxford, after which he travelled to Italy, where he studied Greek under Demetrius Chalcondyles, and Latin with Angelo Politiano. Returning to England he gave public lectures on Greek, at Exeter college, Oxford, and introduced into this country a new mode of pronouncing that language. Being in holy orders he took the degree of DD. in 1491, and in 1504 he was appointed master of the college of Allhallows, at Maidstone, in Kent, when he resigned a college living which he had long held. It appears that at different times he was possessed of various ecclesiastical benefices, one of which, the vicarage of St Lawrence Jewry, London, he resigned in 1517. He died at Maidstone in 1522. Among his works are a

treatise on Grammar; Notes on the Comedies of Terence; a tract against Wickliffe; Epistles to Erasmus and others; all in Latin; and also "Epistola ad Aldum," prefixed to Proclus "de Sphæra," Ven. 1494, which is the only part of his writings that has ever been printed. He was the personal friend of dean Colet, and the tutor of Erasmus, who used to say of him "that he was one who would rather write nothing than write ill."—*Wood's Athen. Oxon.*, vol. i. *Berkenhout's Biog. Lit.*

GROHMANN (JOHN GODFREY) a native of Upper Lusatia, in Germany, who distinguished himself as an industrious compiler and translator. He was a lecturer on philosophy at the university of Leipzig, where he died in 1805, aged forty-one. Such of his works as relate to taste and the arts are much esteemed. Among them are—"A New Historico-Biographical Dictionary," Leipzig, 1796—99, 7 vols, 8vo, a Supplement to which was published by W. D. Fuhrmann, in 1805 and 1808; "An Abridged Dictionary of the Fine Arts," 2 vols, 8vo; "Vestiges of Egyptian Architecture," 4to; "Fragments of Gothic Architecture," 4to; "A Magazine of Ideas, for Amateurs of Gardening," Leips. 1786—1804; "A Dictionary of Civil Architecture and the Theory of Gardening," 2 vols, 8vo.—*Biog. Univ. Biog. des Contemp.*

GROSIER (JOHN BAPTIST GABRIEL ALEXANDER) an ex-jesuit, born in 1743, and died in 1823, librarian of the arsenal at Paris. He first distinguished himself by some articles in the *Année Littéraire*, and he continued that journal after the death of Freron. In 1779 he commenced "*Journal de Littérature, des Sciences et des Arts*;" and from 1777 to 1784 he published "*Histoire de Chine*," translated at Pekin by father Mailla, from Chinese documents. Grosier likewise edited "*Mémoires d'une Société célèbre (les Jésuites) considérée comme Corps Littéraire et Académique, depuis le Commencement de ce Siècle*," Paris, 1792, 4 vols, 8vo, extracted from the *Journal de Trévoux*; and he was a contributor to the *Biographie Universelle*.—*Rev. Encyclop.* t. xxi. *Biog. Univ. Class.*

GROSLEY (PIERRE JEAN) a native of Troyes, born in 1718. Though educated and intended for the French bar, he declined the dry study of the law in favour of the belles lettres, and the reputation he acquired procured his election as a member of the academy of Inscriptions. Of his works, the best known are "*Essais Historiques sur la Champagne*;" "*Observations sur l'Angleterre*;" 2 vols, 8vo, an English translation of which has been published by Dr. Nugent; the lives of the two Pithous, in 2 vols, 12mo; "*Observations de deux Gentilshommes Suédois sur l'Italie*," 4 vols, 12mo; "*Ephémérides Troyennes*;" and "*Recherches pour l'Histoire du Droit François*." He was also a contributor both to the *Dictionnaire Historique*, and to the *Encyclopédie*. His death took place at his native city in 1785.—*Nouv. Dict. Hist.*

GROSSMANN (GUSTAVUS FREDERICK WILLIAM) a celebrated actor and dramatic

writer, born at Berlin in 1746. He was the son of a poor schoolmaster; but such was his inclination for literature, that, in spite of difficulties, he acquired a considerable share of knowledge. After he finished his studies, the cabinet of Berlin sent him to Dantzic, as secretary to the Prussian resident, M de Jung. He was afterwards employed at Königsberg and Warsaw; and he had some concern in the measures adopted for the partition of Poland. His services, however, met with little recompense; and he remained for some time at Berlin, where he became acquainted with Lessing, and an accidental hint from that celebrated writer, incited him to undertake dramatic composition. He subsequently became an actor; and for many years he was successively director of the theatres of Bonn, Mayence, Frankfurt, Hanover, and Bremen. The misfortunes which he experienced as a manager, unhappily led him to contract habits of intemperance, which hastened his ruin, and he died in distress in 1796.—*Biog. Univ.*

GROSVENOR, DD. (BENJAMIN) an anabaptist minister, born in the English metropolis in 1675, and educated at Attercliffe, in Yorkshire. He is known as the author of two works, which once enjoyed a considerable degree of popularity, especially among the dissenters from the established church, entitled "*The Mourner*," and "*An Essay on Health*." At the age of thirty he became an independent, and preached to a congregation of that description at Salters' Hall, and in Crosby-square, London, having taken an Edinburgh degree in 1730. His death took place in 1758.—*Funeral Sermon by Barker.*

GROTO (LUDOVICO) surnamed Il Cieco, from his having been born blind, an Italian poet, born at Adria in 1541. Notwithstanding his misfortune he displayed a great precocity of talent, and on one occasion even acted the part of *Edipus* in a tragedy of that name, at Vicenza. There is an edition of his works in one volume, quarto, Venice, 1598. His death took place in 1585.—*Tiraboschi.*

GRUBENMANN (JOHN ULMIC) an ingenious Swiss mechanic of the last century, who was a native of the canton of Appenzell. He was brought up to the occupation of a carpenter, as also was his brother John Grubenmann, assisted by whom he applied his talents to the building of wooden bridges, and constructed those of Schaffhausen, Reichenau, Wettingen, &c. which were unfortunately destroyed by the French in 1799. The bridge at Schaffhausen, over the Rhine, was the most remarkable, and has been noticed by Mr. Coxe and other travellers in Switzerland.—*Biog. Univ.*

GRYPHIUS (SEBASTIAN) a Suabian by birth, who about the middle of the sixteenth century carried on the business of a printer at Lyons, and distinguished himself by the beauty of his Greek and Hebrew types. His Latin Bible is also much admired as a fine specimen of the art of printing. He died in 1556, at the age of sixty-three.—*Dibdin's Typ. Antiq.*

GUA (JOHN PAUL de) a learned French abbé, prior of St George de Vigou, a member of the Royal Society of London, and of the French Academy of Sciences, was born in Languedoc in 1712, and was the son of John Gua, baron of Malves. He was educated for the church, but devoted himself to literature and scientific pursuits. He first published "Usages de l'Analyse de Descartes," which was followed by other papers on mathematical subjects in the Memoirs of the Academy. He was however chiefly distinguished for having given the plan of the Encyclopédie, though he wrote very little in it. He was the author of several translations, among which are bishop Berkeley's *Hylas* and *Philonous*; Locke's *Essay on the Human Understanding*; and Decker on Trade. In consequence of a challenge, he undertook to write a long poem composed of words of only one syllable, which he performed. He died at Paris in 1785.—*Eloges des Académiciens. Dict. Hist.*

GUADAGNOLO (PHILIP) a learned orientalist, born at Magliano, in Italy, in 1596. He became a minor clerk at Rome, and was employed by the college of Propagandists to execute an Arabic translation of the Scriptures, which appeared in three folio volumes in 1671. His other writings consist of "An Apology for Christianity," in answer to the objections of Achmet Ben Zin Alabedin, a Persian author, whom this work is said to have converted; "Considerations against Mahometanism;" and an elementary treatise on the Arabic language. His death took place in 1656.—*Moreri.*

GUALDO PRIORATO (GALEASSO) an Italian noble, born at Vicenza in 1606. He was appointed historiographer to the imperial court, and is known as the author of "A History of the Troubles in France;" an "Account of the Administration of Cardinal Mazarin;" "History of the Wars of the Emperors Ferdinand, the second and third of that name," folio; "Life of the Emperor Leopold," folio; "History of the Peace of the Pyrenees;" and a "Life of Cardinal Mazarin." His death took place in 1678.—*Dict. Hist.*

GUARIN (PIERRE) a learned monk of the order of St Benedict, born at Rouen in Normandy, in 1678. He published a valuable lexicon and grammar of the Hebrew tongue, in which he was remarkably well skilled, each work occupying two quarto volumes. Father Guarin died in 1729.—*Dict. Hist.*

GUASCO (OCTAVIAN) a learned and ingenious Italian abbé, who was a native of Turin. He was the author of "Historical, Political, and Literary Dissertations," 2 vols, 12mo; a treatise on the "Use of Statues among the Ancients," 4to; and Prize Dissertations published in the Memoirs of the Academy of Inscriptions and Belles Lettres at Paris. He died in 1783.—*Zopf.*

GUAY-TROUIN (RENE du) a distinguished naval commander in the French service, a native of St Maloes, born in 1673. He

APP. BIOG. DICT.

signalized himself at a very early age by ravaging the Irish coasts in a vessel of which he had the command, but which was at length captured by the English. Escaping from confinement he succeeded in reaching France, and was promoted to a frigate, presented with a patent of nobility, and a commandery of St Louis, the latter decoration being given him in reward of his services at Rio Janeiro, of which he made himself master in 1711. His death took place in 1736.—*Dict. Hist.*

GUDIN DE LA BRENELLERIE (PAUL PHILIP) a French dramatic and miscellaneous poet, born in the capital in 1738. Besides several tragedies, he is known as the author of a poem on astronomy; tracts "On the Writing of History;" "On the Abolition of the Slave Trade;" "On the Progress of the Arts under Louis the Fifteenth;" "Observations on Good Manners;" two volumes of "Tales;" a treatise "On the Roman Comitia, the French States-general, and the English House of Commons;" and "The Conquest of Naples," in 3 vols. He died in 1812.—*Biog. Univ.*

GUERET (GABRIEL) a French lawyer and man of letters in the seventeenth century. He was a counsellor in the parliament of Paris, but was more distinguished for his chamber practice than for his eloquence at the bar. In conjunction with Blondeau he published "Le Journal du Palais," a collection of the decrees of the French parliaments; and he was the author of two satirical works, "Le Parnasse Réformé;" and "La Guerre des Auteurs;" besides several productions of less note.—*Voltaire, Siècle de Louis XIV. Nouv. Dict. Hist.*

GUEROULT (PETER CLAUDE BERNARD) a learned writer, born at Rouen in 1745. He successively became professor of rhetoric at the college of Harcourt, provisional director of the Lyceum of Charlemagne, which he had founded, counsellor of the university, and director of the Normal school at Paris. He retired from this last office in 1815, and died in 1821. Among his works are, "La Journée de Marathon," a dramatic piece in four acts, in prose; and "Histoire Naturelle des Animaux de Pline, trad. nouv. avec le Texte en regard," Paris, 1802, 3 vols, 8vo.—*Biog. Univ. Class.*

GUETTARD (JOHN STEPHEN) a French physician of the last century, born in 1715 at Estampes. He was known as a good botanist, and one of the plants in Linneus's catalogue is called after his name. Laborde was indebted to him for some assistance in the compilation of his *Voyage Pittoresque*; he was also the author of some "Memoirs of Natural History," 4to, 2 vols; and "Observations on Plants," 12mo, 2 vols. His death took place in 1786.—*Dict. Hist.*

GUGLIELMINI (DOMINICO) an Italian physician, who for several years filled the professor's chair in mathematics at Bologna, where he was born in 1655. He afterwards resigned his situation for that of professor of medicine in the university of Padua. There is an edition of his works, which contains some useful tracts on hydrostatics, printed at Geneva in

M

2 vols, 4to, 1719, nine years after the author's decease.—*Ibid.*

GUIBERT. A dignified ecclesiastic of the French church, abbot of Nogent, who flourished during the latter part of the eleventh, and beginning of the twelfth centuries. He compiled a "History of the Crusades;" and was also the author of two devotional tracts on relics and pulpit oratory. He died at the age of seventy-one, in 1124.—*Biog. Univ.*

GUICHENON (SAMUEL) a native of Macôn, born in 1607, and educated for the French bar, at which he practised with some reputation in the town of Bourg-en-Bresse. He was bred in the communion of the Romish church, but abjured it for the reformed faith, and retired into Savoy, where he compiled a "Genealogical History of the Royal Family," in two folio volumes. His other writings consist of a "Chronological Catalogue of the Bishops of Belley," in 4to; and a "History of Bresse and Bugey," folio. His death took place in 1664.—*Dict. Hist.*

GUIDI (ALESSANDRO) a lyric poet of considerable genius, born at Pavia about the middle of the seventeenth century. The patronage of the grand duke of Parma, in the capital of whose dominions he had received his education, procured him a flattering reception at Rome, as well as some valuable preferment in the church. There is an edition of his works, published in 1726 at Verona, consisting principally of his "Poesie Liriche;" "La Rime;" "Academia per Musica;" "L'Endimione;" and an opera entitled "L'Amalasunta." He also edited the Homilies of pope Clement XI, in one volume folio. Guidi was raised to the rank of nobility by his fellow-citizens, for procuring by his interference with the imperial court the removal of an oppressive regulation. His death took place in 1712.—*Ibid.*

GUILD, DD. (WILLIAM) a native of Aberdeen, born in 1586, and eventually principal of King's college, in the university of the city which gave him birth. He was a great benefactor to Aberdeen, and founded an hospital there in 1633. His writings consist of a devotional treatise, entitled "Moses Unveiled," and some notes on the canonical books. Dr Guild died in 1657.—*Chalmers's Biog. Dict.*

GUILLEMEAU (JAQUES) was born at Orleans, and became in succession principal surgeon to Charles IX and Henry IV of France. He was the author of "An Apology for Surgeons," printed in 1593; and a Latin translation of the surgical writings of Paré, under whom he had received his professional education. There are two editions of his works, that of Paris, 1598, and that of Rouen, 1649. His death took place in 1609.—*Dict. Hist.*

GUILLET DE ST GEORGE (GUY) first historiographer to the French Academy. He was born at Thiers in 1625, and is known as the author of the lives of Castruccio Castrucani, Mahomet II, and the grand vizir Cuproglu, of which latter work there is an English translation; also of histories of Ancient and Modern Athens and Sparta, and "Les Arts de l'Homme

d'Épée." His death took place in the French metropolis in 1705.—*Biog. Univ.*

GUILLIAUD (CHRISTOPHE) a cutler, was born at Saint Etienne, in the department of the Loire, about 1750. This branch of industry and commerce had not then arrived at its present perfection, and it is to his zeal and well-conducted operations that France owes the great improvements that have been made in her manufactures, not only in this, but in other useful arts. Guillaud, who at the commencement of the revolution adopted its principles, and made his fortune under the republic, towards the end of his life fell into a bigoted devotion. He made two journeys to Rome, to obtain indulgences and to purchase statues of saints and virgins, with which he decorated an elegant country-house, which he possessed on the borders of the Saône. After the restoration in 1813, he established a calvary on one of the mountains near Lyons, of which the crosses were of iron, and the figures of marble. In 1797 he published separately several Mémoires, of which the most remarkable are "Moyens de porter l'Agriculture, les Manufactures, et le Commerce de France au plus haut Point de Splendeur et d'Utilité publique," with this motto, taken from the work itself, "When the government chooses, the French people will be the most active agriculturalists, the most ingenious artists, and the first merchants in the world;" and "Mémoire sur la Mise en Œuvre de tous les Métaux du Département de la Loire." He died in 1821.—*Biog. Univ. des Contemp.*

GUILLLOTIN (JOSEPH IGNATIUS) a French physician, whose name has become famous as the appellation of the machine which he was the means of introducing into France for the purpose of beheading criminals. He was born at Saintes in 1738, and many years previous to the revolution he was engaged in medical practice at Paris. He possessed a respectable character, and was considered as an ingenious man; but he attracted little public notice till he engaged in politics. He had however been employed in 1770 in the investigation of Mesmerism, and in 1787 he formed a scheme for colonizing the banks of the Ohio, in North America, which he was prevented from carrying into execution. On the assembling of the states-general, he was nominated a deputy from the Tiers Etat of Paris. He had again a seat in the National Assembly, before which, on the 1st of December, 1789, he delivered a report on the penal code, throughout which a spirit of humanity predominates. It was on this occasion that he proposed, as a measure of mercy, the use of the fatal instrument, since called the guillotine, of which however he was by no means the inventor, as it closely resembles the "maiden" employed to inflict death on malefactors in the north of England and in Scotland in the sixteenth century. It has been reported that M. Guillotin was one of the numerous victims of his own contrivance. But this was not the case; for he withdrew from his political station during the reign of terror, and closed in peace a long

and in some respects useful life, on the 26th of May, 1814.—*Dict. des H. M. du 18me S. Biog. des Contemp.*

GUIRAN (GALLIARD) a French advocate, counsellor of the court of Nismes, where he was born at the commencement of the seventeenth century, and afterwards rose to be counsellor of state to the prince of Orange. He published an "Historical and Chronological Register of the Seneschals of Nismes and Beaucaire;" an "Explanation of two Ancient Brass Coins struck at Nismes," both works in 4to; and left behind a large collection of materials for the history of the same city in manuscript. His death took place in 1680.—*Dict. Hist.*

GUITTONE D'AREZZO, so called from the place of his birth. He became a member of a society partly military and partly ecclesiastical, banded together for a crusade against the Albigens, but eventually retired to Florence, where he became superior of a religious community of his own foundation, over which he presided till his death in 1293. He was the author of some miscellaneous poetry, epistles, &c.—*Biog. Univ.*

GUIZOT (ELIZABETH CHARLOTTE PAULINE) a French lady who excelled as a writer of works destined for the instruction of youth. She was the daughter of M. de Meulan, who held an important office under government in the financial department, and she was born November 2d, 1773. The French revolution, which in its progress occasioned the ruin of multitudes, destroyed the fortune of her father, who died shortly after, in 1790. Her family was subsequently reduced to great inconveniences and privations, and the endeavour to provide for their exigences proved the means of developing her literary talents. Her first production was a gay and piquant novel, entitled "Les Contradictions," which was followed by another called "La Chapelle d'Ayton," founded on an English work of fiction. She also wrote in the public journals, particularly in "Le Publiciste," a paper edited by M. Suard; and her articles on the theatres, on books, and on manners, attracted great public attention. In March 1807, through ill health, she was obliged to suspend her literary labours, a circumstance which occasioned her much anxiety. At this time, she received a letter from a person unknown, offering to write for her in the periodical journal, and subsequently she became acquainted with this generous friend, who proved to be M. Guizot, a gentleman since highly distinguished both as an author and a statesman. Sympathy of taste and sentiment led to an attachment between the parties, and at length in 1812 they were married. M. Guizot was editor of a periodical miscellany, entitled "Annals of Education," for which his wife wrote a number of articles, including the Journal of a Mother; and about the same time she published two volumes of tales, entitled "Les Enfants." From 1814 till 1820 M. Guizot was employed under government, and during that period his wife remitted her literary undertakings; but in

1821 she resumed her pen, and published "L'Ecolier, ou Raoul et Victor," 4 vols, 12mo, a romance of education, which was rewarded with a prize from the French academy. In 1823 appeared her "Nouveaux Contes;" and in 1826, she published "Lettres de Famille sur l'Education Domestique;" exhibiting a theory of education. This highly talented and amiable woman died July 30th, 1827.—*Rev. Encycl.*

GULDENSTAEDT (JOHN ANTHONY) a Russian naturalist, born at Riga, who filled a professor's chair at St Petersburg. He travelled through great part of Tartary on a scientific tour, and on his return published the result of his researches. His death took place in 1781.—*Biog. Univ.*

GUNDLING (NICHOLAS JEROME) a German philosopher, born in 1671 in the neighbourhood of Nuremberg. He held the rank of a privy counsellor at Berlin, and filled the professor's chair in rhetoric, philosophy, and public law at the university of Halle. He was the author of a variety of works, the principal of which are a treatise "On the State of Germany under Conrad the First," 4to; "The Road to Truth," 8vo, 3 vols; "A History of Moral Philosophy;" a volume of miscellaneous essays, entitled "Otia;" "Status Naturalis Hobbesii in corpore defensio;" "De Jure Territorii oppignorati;" "Gundlingiana," &c. Professor Gundling died in 1729.—*Ibid.*

GUNDULPH, bishop of Rochester, a Norman divine, distinguished as an architect. He was one of the ecclesiastics who were brought into England by William the Conqueror, with whom he was probably a favourite, and who employed him to erect a fortress on the east side of the metropolis, which now forms that part of the Tower of London called the White Tower. He also erected Rochester castle, a quadrangular structure, seventy feet square, which is one of the most entire and interesting examples of Norman castellated architecture in the kingdom; and this prelate also rededicated the cathedral church of Rochester. He died in 1108.—*Anglia Sacra*, vol. ii. *Thorpe's Customale Roffense.*

GUNNER (JOHN ERNEST) bishop of Drontheim in Norway, of which country he was a native, being born at Christiana in 1718. Botany was his favourite study, for the furtherance of which, as well as of other branches of natural history, he assisted in founding the Royal Norwegian Society. He published an account of the vegetable productions of the kingdom, under the title of "Flora Norvegica." His death took place at Drontheim in 1773.—*Dict. Hist.*

GUTCH (JOHN) an industrious antiquary, who long held the office of registrar of the university of Oxford. He received a collegiate education, and having taken the degree of MA. in 1771 he obtained the rectory of Kirkby Underwood, in Lincolnshire; in 1786 that of St Clement, near Oxford; in 1795 he was also appointed chaplain of All Soul's college. He was chosen registrar of the university, and also registrar of the chancellor's courts in

G U T

1797; the former of which offices he held till 1824, when he resigned it in consequence of his advanced age and infirmities. His death took place at Oxford, July 1st, 1831, at the age of 86. He published "Collectanea Curiosa, or Miscellaneous Tracts relating to the History and Antiquities of England and Ireland, the Universities of Oxford and Cambridge, and a variety of other subjects, chiefly from the MSS. of Archbishop Sanscroft," 1781, 2 vols, 8vo; "The History and Antiquities of the Colleges and Hall in the University of Oxford, now first published from the original Manuscripts in the Bodleian Library, written by Anthony Wood, with a continuation to the present time," 4to; "Fasti Oxoni-

G U Y

ses, or a Commentary on the Supreme Magistrates of the University, with a continuation, and Additions and Corrections to each College and Hall," 1790; and "The Antiquities and Annals of the University," 1792-96, 3 vols, 4to.—*Ann. Biog.*

GUYON (MARIE CLAUDE) a priest of the Oratory at Paris, born at Louise le Saunier in 1701. He is known as the author of "A History of the Amazons;" "A History of Empires and Republics," in 12 vols, 12mo; "A History of the Indies," in 3 vols; an "Ecclesiastical Dictionary;" "The Oracle of New Philosophers;" and a supplement to Echart's Roman History. His death took place at Paris in 1771.—*Biog. Univ.*

H A I

HACKSPAN (THEODORE) a divine of the Lutheran persuasion, was born at Weimar in 1607, and was educated at Jena and at Altdorf, of which university he became professor of divinity in 1654. He died in 1659. His chief works are, "Observationes Arabico-Syriacæ in quædam Loca Veteris et Novi Testamenti," 4to; "Miscellaneorum Sacrorum;" "Tractatus de Usu Librorum Rabbincorum," 4to; "Fides et Leges Mohammedis ex Alcorano," 4to; "Sylloge Disputationum Theologicarum et Philologicarum," 4to; "Notæ Philologico-Theologicæ in varia et difficiliora Veteris et Novi Testamenti Loca," 3 vols, 8vo. —*Moreri.*

HAGER (JOHN GEORGE) a German philologist, distinguished for his vast erudition. He was born at Oberkotzau in 1710, and died in 1777, professor in the school of Chemnitz. He published "Homeri Ilias, Gr. et Lat." Chemnitz, 1745-67, 2 vols, 8vo; "Elementa Artis Disputandi," 1749, 8vo; "Bibliotheca Geographica," 1766-78, 3 vols, 8vo; and "Homeri Odyssea, Batrachomyomachia, et Hymni, Gr. et Lat." 1776-77, 2 vols, 8vo; besides other works.—*Biog. Univ. Class.*

HAHN (SIMON FREDERIC) counsellor, historiographer, and librarian to the elector of Hanover, was born at Kloster-Bergen in Hanover, in 1692. When only fourteen years of age he pronounced a Latin oration at the university of Halle, on the origin of the monastery of Bergen, which was printed. At twenty four he was appointed professor of history at Helmstadt. His works are, "Collectio Monumentorum veterum et recentium ineditum," 2 vols, 8vo; two dissertations, one on the "Kingdom of Arles," the other on "Henry the Fowler;" and four volumes of a "History of the Empire." He died in 1729.—*Moreri.*

HAIGHTON (JOHN) an eminent physician and lecturer on midwifery and physiology at Guy's hospital, Southwark, who died in 1822.

H A L

He was a fellow of the Royal Society, and the author of some papers on Generation, in the Philosophical Transactions; and he also published medical and surgical cases and observations in "Duncan's Medical Commentaries;" the "Memoirs of the Medical Society of London;" and the "London Medical Journal."—*Orig.*

HALHED (NATHANIEL BRASSEY) an eminent orientalist, who received his education at Harrow school, and afterwards became a civil officer in the service of the East India Company at Bengal. He published "A Code of Gentoo Laws on Ordinations of the Pundits, from a Persian translation," 1776, 4to; "A Grammar of the Bengal Language," printed at Hoogly in Bengal, 1778, 4to; and "A Narrative of the Events which have happened in Bombay and Bengal relative to the Marhatta Empire since July 1777," 1779, 8vo. He subsequently returned to England, and obtained a seat in the House of Commons for the borough of Lymington. At one time he appears to have devoted himself to the study of polite literature, and he produced "Imitations of the Epigrams of Martial," in four parts, 1793-94, 4to. He next exhibited a melancholy instance of mental delusion, in his persevering patronage of the lunatic prophet Richard Brothers, whose confinement in Bedlam he denounced in parliament, as an instance of tyranny and oppression; at the same time that he advocated the cause and attempted to vindicate and explain the nonsensical reveries of the crazy enthusiast, by means of the press, in his "Testimonies to the Authenticity of the Prophecies of Richard Brothers, and of his Mission to recall the Jews," 1795, 8vo; and other publications, of which a list may be found in the first of the annexed authorities. Mr Halhed died in 1830, at the age of seventy-nine. He brought from the East Indies a valuable collection of Oriental manuscripts, which he sold to the trustees of

HALL

the British Museum.—*Biog. Dict. of Living Authors. Gent. Mag.*

HALL (RICHARD) a Roman Catholic biographer, was educated at Christ's college, Cambridge, and became a professor at Douay. He was the author of a work of considerable merit, entitled "The Life of Bishop Fisher:" it goes under the name of Dr Bailey. Mr Hall died in 1604.—*Dodd's Church History.*

HALL (ROBERT) an eminent preacher among the particular baptists, and a distinguished theological writer. He was the son of a baptist minister at Arnsley, in Leicestershire, where he was born, in May 1764. He was educated partly at an academy at Northampton, and partly at Bristol, after which he studied at King's college, Aberdeen, where he took the degree of Master of Arts. He then became an assistant to Dr Caleb Evans, in the academy at Bristol, and his coadjutor in the ministry; but from this situation he was obliged to retire, in consequence of approaching symptoms of mental derangement. He was therefore removed to the care of his friends in Leicestershire, where by judicious treatment the alarming malady was subdued, and his mind recovered its former powers. In 1791, when his health was sufficiently restored to enable him to resume his ministerial functions, he was chosen successor to the celebrated Robert Robinson. While in this situation he first appeared as a writer for the press, having published a pamphlet in reply to another by the Rev. John Clayton, in which he demonstrated that christianity was not inconsistent with the highest degree of civil liberty. This was followed by his "Vindication of the Freedom of the Press," which soon passed through six editions. In 1803 Mr Hall was again afflicted with an aberration of mind, which obliged him to suspend his pastoral duties, and a minister was appointed to his charge at Cambridge, so that on his recovery, he found that his office was already filled. Soon after he was invited to settle as minister of a baptist congregation at Leicester, where he remained more than twenty years. On the death of Dr Ryland, in 1826, he removed to Bristol, to fill the vacancy occasioned by his death in the presidency of the Bristol academy, and the pastorship of Broadmead chapel, in that city; and he continued to discharge the duties belonging to those situations till his death, which took place, February 21st, 1831. Mr Hall was distinguished by the possession of powerful talents, and was gifted with eloquence at once powerful and persuasive, and these were constantly exerted in diffusing the principle of happiness among his fellow-creatures. To great talents and learning he united a most sincerely christian temper and disposition, and a liberality of mind which rendered him anxious to promote civil and religious liberty. Among the principal productions of his pen may be mentioned "Modern Infidelity, considered with respect to its Influence on Society, a Sermon preached at Cambridge," 1800, 8vo; "Reflections on War, a Sermon on June 1st, 1802, being the day of

HALL

Thanksgiving for a General Peace;" "The effects of Civilization on the People in European States," 1805; "The Advantages of Knowledge to the Lower Classes, a Sermon at Leicester," 1810; "A Sermon occasioned by the death of Princess Charlotte of Wales, preached at Leicester," 1817; besides those already mentioned; and Mr Hall was for some time one of the conductors of the Eclectic Review. A collective edition of his works, in 6 vols, 8vo, with a biographical memoir, is in the course of publication.—*Ann. Biog.*

HALL (SIR JAMES) baronet of Dunglass, county of Haddington, FRS. and SA. Edinburgh. He was the eldest son of Sir John Hall, the third baronet, by Magdalen, daughter of Sir Robert Pringle; and he succeeded his father in the baronetcy, July 3, 1776. He was returned to the House of Commons for the borough of St Michael's, in Cornwall, on a vacancy, in 1808; but he continued to sit in parliament only till the dissolution in 1812. He was the author of "An Essay on the Origin, Principles, and History of Gothic Architecture," 1813, 4to; and of several papers in the Transactions of the Royal Society of Edinburgh. Mineralogy and geology were among the most important subjects of his scientific researches; and he particularly distinguished himself by his experiments on the fusion of stony substances, and by establishing the identity of composition of whinstone and lava. He likewise ascertained that carbonate of lime (as common marble) might be fused, without decomposition, if subjected to a degree of pressure equal to that which would be caused by the sea at the depth of about a mile and a half from its surface. The result of his inquiries tended to establish the truth of the Plutonian or Igneous theory of the origin of minerals, and to vindicate the authority of Dr James Hutton, in opposition to the German geologist Werner and his followers. His death took place at Edinburgh, June 23, 1832, at the age of seventy-two. Sir James Hall married, Nov. 10, 1786, lady Helena Douglas, second daughter of Dunbar third earl of Selkirk, by whom he had three sons and three daughters; one of the former of whom is the celebrated captain Basil Hall, R.N.—*Ann. Biog.*

HALL or HALLE (EDWARD) an eminent historian and lawyer, was born in London, and after receiving his education at Eton, he obtained a fellowship at King's college, Cambridge. He studied at Gray's-inn, and being called to the bar was made sergeant-at-law, and judge in the sheriffs' court. He had also a seat in the House of Commons, and was a warm supporter of the Catholics. He died in 1547, and the following year his chronicle, entitled "The Union of the Houses of York and Lancaster," was printed in folio. In 1550 it was continued by Grafton, and in 1809 it was reprinted at London.—*Gent. Biog. Dict.*

HALLE (JOHN NOEL) a French physician and natural philosopher, born at Paris in 1754. He took his first degree in medicine in 1776, and two years after he was admitted

H A M

doctor, and became successively professor of the theory of medicine and therapeutics at the School of Health. He subsequently succeeded Corvisart as first physician to Napoleon, and then as professor of medicine in the college of France. At length he was appointed physician to monsieur (now Charles X) and president of the section of medicine at the Royal Academy. He died at Paris in 1822. He published a great number of memoirs in various periodical journals, among which are "Recherches sur la Nature et les Effets du Méphitisme des Fosses d'Aisance," repr. 1785, 8vo; and "Rapport suivi de soixante-quatre Expériences sur le Remède Pradier," 1811. His lectures were published under the title of "Hygiène, ou l'Art de conserver la Santé," 1806, 8vo.—*Biog. Univ. Class.*

HALLET (JOSEPH) a dissenting minister, was born in 1692 at Exeter, where in 1772 he succeeded his father as pastor of a respectable congregation. He died in 1744. He published several tracts, and three volumes of notes on difficult passages of Scripture.—*Gen. Biog. Dict.*

HAMARSKIÖLD (LORENZ) a Swedish philosopher, who died at Stockholm, October 15, 1827. He was the author of a "History of Philosophy," in four volumes, the last of which appeared a short time before his death; and he left a treatise on logic prepared for the press. Hamarskiöld also published the works of Stjernhjelm, the father of Swedish poetry; and he edited the writings of another poet, his countryman and contemporary, Stagnelius.—*Foreign Review.*

HAMILTON (GAVIN) an historical painter, was born at Lanark in Scotland, and going to Italy became the pupil of Augustine Massucci. His style was finely classical, which was the result of his close study of the antique. He employed the latter part of his life chiefly in the discovery of antiquities. He wrote a work entitled "Schola Italica Picturæ." His death took place at Rome in 1797.—*Pitkington by Fuseli.*

HAMILTON (JAMES) the inventor of alleged improvements in the art of teaching languages, who died at Dublin, whither he had gone to deliver lectures on the Hamiltonian system of tuition, September 16, 1829, in the sixtieth year of his age.

HAMMOND (ANTHONY) a miscellaneous writer, was born at the family seat of Somersham place, Huntingdonshire, in 1683, and was educated at St John's college, Cambridge. He procured a seat in parliament, and so distinguished himself by his eloquence as to acquire the name of "Silver Tongue." He was likewise a commissioner of the navy. He was the author of the Life of Mr Moyle, prefixed to his works; and of "A Miscellany of Original Poems." Mr Hammond died in the Fleet prison in 1738.—His son, **JAMES HAMMOND**, was equerry to Frederick prince of Wales, and the year preceding his death was chosen member for Truro. He died in 1742. His "Love Elegies" were edited by lord Chesterfield, and were very popular.—*Johnson's Poets.*

H A R

HAMPER (WILLIAM) a writer on antiquities and biography, descended from a family long settled in the county of Sussex. He was born at Birmingham, where his father was a manufacturer, and he was brought up to the same employment. Travelling through many parts of England in the prosecution of business, he was enabled to indulge the taste which he had acquired for visiting churches and other ancient buildings. His first compositions appear to have been in verse, and many of them appeared in the Gentleman's Magazine. Between 1804 and 1812, he furnished, for insertion in that miscellany, a number of sketches of churches and other remains of antiquity, with original descriptions and illustrations. He also supplied contributions for Nichols's History of Leicestershire, and Ormerod's History of Cheshire, and other archaeological works. In 1821 he was chosen a fellow of the society of antiquaries, and several of his papers appear in their transactions. His principal publication is "The Life, Diary, and Correspondence of Sir William Dugdale," 1827, 4to. He died at Highgate, near Birmingham, May 3, 1831.—*Ann. Biog.*

HARDENBERG (CHARLES AUGUSTUS, prince of) a Prussian statesman, born about 1750. He commenced his political career with a mission to England in 1782, and having arrived at the office of chancellor of Prussia, he was appointed plenipotentiary of the court of Berlin at the Congress of Verona. His death took place at Genoa in 1822.—*Annuaire Necrologique. Biog. Univ. Class.*

HARDER (JOHN JAMES) professor of medicine, anatomy, and botany at Basil, where he was born in 1656. He was created a count of the empire for his merit. He wrote "Prodromus Physiologicus;" "Examen Anatomicum Cochleæ Terrestris;" "Apianum;" "Prodr. Phys. Naturam explicans Humor Nutritioni et Generationi Dicatorum," &c. His death took place in 1711.—*Moreri.*

HARDION (JAMES) a French historian, was born at Tours in 1686. He was a member of the French Academy, and of the Academy of Inscriptions, and was appointed keeper of the antiquities and library in the royal cabinet. He was also historical and geographical tutor to the French princesses, for whose use he composed his "Histoire Poétique," 3 vols, 12mo; and his "Universal History," 18 vols, 12mo. Several of his dissertations are contained in the Memoirs of the Academy of Inscriptions. He died in 1766.—*Dict. Hist.*

HARDOUIN (JOHN STEPHEN) a French writer, was born in 1735, and died at Paris in 1817. He made a rhymed translation of Young's Night Thoughts, from the prose version of Letourneur, 1792, 4 vols, 12mo; and another of Fenelon's Telemachus, 6 vols, 12mo; and he published "Recueil de Poésies d'Anacréon et de Théocrite," 1812, 12mo.—*Biog. Univ. Class.*

HARENBERG (JOHN CHRISTOPHER) a German historian and orientalist, born near Hildesheim in 1696. He entered into the church among the Lutherans, and became pro-

H A R

fessor of history and political geography at Brunswick, and a member of the Academy of Sciences at Berlin. He died at Schoeningen in 1774. Among his numerous works are "A Succinct Introduction to the Ancient and Modern Theology of Ethiopia," published under the pseudonym of Adolph Windhorn, Helmstadt, 1719, 4to; "Jura Israelitarum in Palestina," Hildesheim, 1724, 4to; and "A Pragmatic History of the Order of the Jesuits, from its Origin to the present Time," 1760, 2 vols, 8vo.—*Biog. Univ.*

HARMAR (JOHN) a learned divine, was the son of Dr John Harmar, warden of Winchester, and was born at Churchdowne in Gloucestershire in 1594. He took his master's degree at Magdalen college, Oxford, in 1617. He then became master of the school at St Alban's. In 1650 he obtained the Greek professorship at Oxford, but of that, as well as of the rectory of Ewhurst in Hampshire, he was deprived at the restoration. He died in 1670. His principal works are, "Praxis Grammatica," 8vo; "Lexicon Etymologicum Græcum," folio; "Janua Linguarum." He also wrote panegyrics on Oliver Cromwell, Richard his son, and Charles II.—*Calamy. Wood.*

HARMER (THOMAS) the dissenting minister of a small congregation at Wottesfield in Suffolk, was born at Norwich in 1715. He published "Observations on divers Passages of Scripture, illustrated by the Accounts of Travellers in the East," which had such a favourable reception that he continued it to four volumes. His other works are "An Account of the Jewish Doctrine of the Resurrection of the Dead;" "Outlines of a Commentary on Solomon's Song," &c. His death happened suddenly in 1783.—*Gent. Mag.*

HARRINGTON (JAMES) a celebrated political writer, omitted by accident in the body of the work. He was the eldest son of Sir Sapcote Harrington, knight, and was born at Upton in Northamptonshire, the seat of his maternal grandfather, in 1611. After a due preparatory education, he was removed to Trinity college, Oxford, where he was placed under the care of the celebrated Chillingworth. On the death of his father he quitted the university, and visited the Netherlands, where he entered into lord Craven's regiment, and being quartered at the Hague, frequented the courts of the prince of Orange and the queen of Bohemia, and accompanied the elector palatine to Denmark. He subsequently visited Germany, France, and Italy, and on his return to England, siding with the parliamentary party in 1646, he accompanied their commissioners to Charles I at Newcastle, and on their recommendation was appointed groom of the stole to the king. In this capacity he never disguised his republican sentiments, yet was so operated upon by his personal feelings, that he was heartily desirous of producing an accommodation between Charles and the parliament, which disposition is supposed to have produced his removal from the king's person, who is said to have given him a token of his affection before his execution.

H A R

That event gave him a great shock, and he always spoke of it with regret, although the portrait which he has drawn of the unfortunate monarch is by no means favourable. During the protectorate he passed his time in retirement, and occupied his leisure in producing his famous work entitled "Oceana," which, after some opposition on the part of Cromwell, was published in 1656. In order to propagate his opinions, he established a sort of club, or debating society, called the "Rota," which was terminated by the Restoration, an event that reduced Harrington to a state of privacy. He still however busied himself in political schemes, which at length led to his arrest for a supposed plot against the government, of which he was entirely innocent. He was however treated with great severity, and his release by habeas corpus evaded by an arbitrary removal to St Nicholas Island, near Plymouth. Here, either from distress of mind, or improper medical treatment, his faculties became impaired, which fact being represented to the king by his relations, led to his release. He partly recovered, and married a lady to whom he had been early attached. He died of paralysis in 1677, and was buried at St Margaret's, Westminster. Harrington was a deep and profound thinker, of that class who draw principally from classical reading and the store of their own minds, and who therefore more resemble the ancient philosophers, who reasoned a priori, than the modern school, which chiefly derives its convictions from induction. His "Oceana," which is a political romance, and the Utopian image of a republic, is a work of considerable genius, thought, and invention, and is characterised by an enthusiastic love of liberty. The style is however crabbed, and it is probably more quoted than read during the present undue exclusive attention to matters of fact and experience. The writings of Harrington were published in one volume, folio, by Tindal, in 1700, and again more completely by Dr Birch, in 1737. He published a poetical version of a part of Virgil, which is very little known.—*Biog. Brit. Atkins's Gen. Biog.*

HARTZHEIM (JOSEPH) a learned jesuit, was born at Cologne in 1694. He was for some time professor of Greek and Hebrew at Milan, but returning to Cologne, he obtained the professorship of philosophy and divinity. He died in 1763. He wrote "Bibliotheca Scriptorum Coloniensium," folio; "De Initio Metropoleos Ecclesiasticæ Coloniae Disquisitio," 4to; "Summa Historiæ omnis ab Exordio Rerum ad Ann. a Christo Nato 1718;" "Dissertationes historico-criticæ in Sacram Scripturam," folio; "Inscriptionis Herculensis Urbis Romanæ Explanatio." He likewise edited and published the "Councils of Germany," 4 vols, folio.—*Dict. Hist.*

HARVEY (GIMKON) a physician, was a native of Surrey, and was educated at Exeter college, Oxford, whence he went to Leyden, and took his doctor's degree. He was appointed physician to the Tower at the Revolution, which situation he is said to have held

fifty years. His chief works are "Morbus Anglicus, or a Discourse on Consumptions," 8vo; "The Conclave of Physicians," 8vo; "Discourse of the Small Pox," 8vo; "Little Venus unmasked, or a Treatise on Siphilis;" "Art of curing Diseases by Expectoration."—*Wood.*

HATSELL (JOHN) chief clerk to the House of Commons, died at Marden park, near Godstone, in Surrey, in 1820, aged about seventy-eight. He was the author of "A Collection of Cases of Privilege of Parliament, from the earliest Records to the Year 1628," 4to, of which the first volume appeared in 1778; "Precedents of Proceedings in the House of Commons, under separate Titles, with Observations," 5 vols, 4to; and "Rules and Standing Orders of the House of Commons," 1809, 4to.—*Reuss. Gent. Mag.*

HAWKER (ROBERT) an evangelical clergyman of eminence, who died April 6, 1827, at Plymouth, where he had been for half a century vicar of the parish of Charles the Martyr. He received his education at Magdalen college, Oxford, and obtained the degree of DD. He was the author of a commentary on the Bible, sermons, and other religious works, much esteemed among the partisans of the peculiar sentiments which he professed.—*Month. Mag.*

HAZLITT (WILLIAM) a distinguished writer on general literature, who was a native of Maidstone, in Kent, and was the son of a dissenting minister. His youth was chiefly spent in Shropshire, Devonshire, and Wiltshire. At an early age he removed to London, where he employed much time in endeavouring to attain a knowledge of painting; but though he always preserved an intense love for the fine arts, he soon relinquished all thoughts of adopting painting as a profession, and determined to devote himself to literature. The first acknowledged production of his pen was "An Essay on the Principles of Human Action," in which he is said to have displayed much metaphysical ingenuity. His "Characters of Shakspeare's Plays," though inferior in depth of observation to the strictures of Schlegel on the productions of our great dramatist, attracted much notice and procured great credit for the writer. Mr Hazlitt delivered at the Surrey Institution a "Course of Lectures on the English Poets," which was afterwards published. For some time he wrote theatrical criticisms for the Morning Chronicle, and during a still longer period he furnished political and critical articles for the Examiner newspaper: he was likewise an occasional contributor to a considerable extent to various periodical journals. Many of his essays thus published afterwards appeared collectively under the title of "Table Talk;" "The Spirit of the Age;" "The Plain Speaker;" and "The Round Table." Hazlitt's principal work is "The Life of Napoleon," 4 vols, 8vo, which, though tinged with the party feeling of the writer, exhibits much deep philosophical research. He was a contributor to the supplementary volumes of the

Encyclopedia Britannica, but according to his own statement he merely furnished the outlines of some articles, or corrected and improved those which had been prepared by other contributors. Among his remaining works are "Political Essays, and Sketches of Public Characters;" "A View of the British Stage;" an "Account of the British Galleries of Art;" "A Letter to William Gifford, Esq.;" "Lectures on the English Comic Writers, delivered at the Surrey Institution;" "The Literature of the Elizabethan Age;" and "The Modern Pygmalion," which last is a very extraordinary history of the author's amours, apparently modelled on the Confessions of his favourite Rousseau. He likewise published "Notes on a Journey through France and Italy;" and a very short time previous to his death appeared a very amusing volume entitled "Conversations of James Northcote, Esq. RA. by William Hazlitt." The death of this eccentric but gifted writer took place in Frith-street, Soho, London, September 18th, 1830, at the age of fifty-two.—*Month. Mag.*

HEBEL (JOHN PETER) a German poet, distinguished for the profoundness of his views, and the originality of his style. He was born in the duchy of Baden in 1760, and studied at the college of Basil, after which he was appointed tutor at the college of Loerach. In 1791 he removed to Karlsruhe, where he was employed in public instruction and the service of the church till the close of his life, which took place September 22, 1826. He was intimately acquainted with botany and mineralogy, and he cultivated with success mathematics, and the Greek, Hebrew, and Latin languages, but he chiefly excelled as a writer of poetry. He published in 1803, "Allemannische Gedichte für Freunde ländlicher Natur und Sitten"—German Poetry for the Lovers of Nature and Rural Manners, which passed through several editions. He was also the author of a "History of the Bible;" a "Popular Almanack," and other useful works.—*New Necrology of Germans, vol. ii. Revue Encyclop. tom. xxxvi.*

HEBER, DD. (REGINALD) bishop of Calcutta, was the son of the Rev. Reginald Heber, of Marton, in Yorkshire, and was born April 21, 1783, at Malpas in Cheshire. He received part of his education at the grammar school of Whitchurch in Shropshire, whence, in 1800, he removed to Brazenose college, Oxford. In 1802 he obtained a university prize for a copy of Latin hexameters; and the following year he greatly distinguished himself by another prize poem, "Palestine," in English. He afterwards applied himself to mathematics with considerable success, and in 1805 he took the degree of BA. Having received a third prize for an English essay "On the Sense of Honour," he was elected to a fellowship in All Souls college, soon after which he went abroad. He travelled in Germany, Russia, and the Crimea, and made observations, from which many curious extracts were published in the travels of Dr E. D. Clarke. Having returned home he graduated

HED

as MA. at Oxford, in 1808; and the next year he published a second English poem, entitled "Europe, Lines on the present War." About the same time he was presented to the family living of Hodnet, and he married Amelia, daughter of the Rev. W. Shipley, dean of St Asaph. For several years subsequently he devoted himself with great assiduity to his duties as a parochial priest. In 1815 he preached the Bampton Lecture, on "The Personality and Office of the Christian Comforter," a course of sermons on John xvi. 7. He also composed many articles for a Dictionary of the Bible, and published an ordination sermon, delivered before the bishop of Chester. In 1822 appeared his life of Jeremy Taylor, with a review of his writings; and the same year he was chosen preacher to the Society of Lincoln's-inn. On the death of bishop Middleton, he was offered the see of Calcutta, which, after some hesitation, arising from the most honourable motives, he accepted, and on the 16th of June, 1823, embarked for the East Indies. On Ascension day, 1824, bishop Heber held his first visitation in the cathedral of Calcutta; and he subsequently made progresses through various parts of his very extensive diocese, consecrating churches, and taking the appropriate steps for extending the knowledge of Christianity among the Hindoos. Having taken a journey in the discharge of his episcopal duty, he arrived at Trichinopoly, April 1, 1826; and on the next day, while bathing, he was seized with an apoplectic fit, which terminated his existence. Since the death of this prelate has been published "A Narrative of a Journey through the Upper Provinces of India, from Calcutta to Bombay," 2 vols, 4to, new edit. 3 vols, 8vo. From the numerous tributes which have been paid to his memory, it appears that Dr Heber was an excellent and virtuous man, a conscientious performer of his ministerial duties, and a zealous advocate of the cause of Christianity; but from a published letter which he addressed to the Syrian bishop of St Thomas, on the Malabar coast, it would seem that he had imbibed strong opinions against those Christians who hold communion with the church of Rome, while many high church members of the Church of England affected to undervalue this estimable prelate himself, whose zeal and activity formed a satire upon the absence of such qualities in themselves.—*Ann. Biog.*

HEBERT (—) a French writer of the thirteenth century, known as the translator of a singular work, entitled "Dolopathos, or the Romance of the Seven Sages," ascribed to an Indian philosopher, who flourished a century before the Christian era. It has been translated into Persian, Arabic, Hebrew, Syriac, Greek, and Latin, as well as French. Only some fragments remain of the version of Hebert, published in the collection of Fauchet, and the Bibliothèque of Duverdier; but there are later translations of the whole work in French and other European languages.—*Biog. Univ. Class.*

HEN

HEDOUIN (CHARLES FRANCIS) an advocate of the parliament of Paris, and secretary of the chamber of accusation under the old regime. He devoted his leisure to the study of the natural sciences, especially botany; and he made some valuable collections, which were sold after his death in 1826. He was the author of "Veni-mecum Bibliographique du Naturaliste;" a treatise "Sur les Monstres dans le Règne Végétal;" "Notices de Médaillies Anciennes et Modernes;" and "Flore de Boulogne."—*Ibid.*

HEDOUVILLE (GABRIEL THEODORE JOSEPH) general and peer of France, died in 1825. He was sent by the Directory to St Domingo, and on his return he extended his reputation by terminating the insurrection of La Vendée. In 1805 he was minister of France to the confederation of the Rhine, and he afterwards attended Jerome Buonaparte in his campaign against the Prussians.—*Ibid.*

HELLINS (JOHN) an ingenious mathematician, who was a clergyman of the church of England, and after having held a curacy in Northamptonshire, he was presented, in 1790, to the vicarage of Potterspury, in the same county, where he resided during the remainder of his life. In 1796 he was chosen a fellow of the Royal Society, and in 1800 he took the degree of bachelor of divinity, at Trinity College, Cambridge, where he probably received his education. Mr Hellins published several papers on some of the most useful branches of pure mathematics, in the Philosophical Transactions; and in 1788 he produced a volume of "Mathematical Essays on several Subjects;" though he is best known as the editor of a translation from the Italian of the "Analytical Institutions" of Signora Agnesi. He likewise occasionally furnished criticisms on mathematical publications for the British Critic, from 1795 till 1814. His death took place in 1827.—*Genl. Mag.*

HEMERT (PAULUS van) professor of philosophy at the Hague, where he died in 1825. He was a member of the Royal Institute, and he was one of the most zealous partisans of Kant, whose philosophical system he recommended in his writings, particularly in "Principles of the Philosophy of Kant," Amsterdam, 1796, 4 vols, 8vo; and in his "Magazine of Critical Philosophy," 1798, 6 vols, 8vo.—*Biog. Univ. Class.*

HENAO (GABRIEL de) a Spanish jesuit and celebrated casuist, was born in 1611, and died in 1704. His principal productions are those relative to the history of Biscay, and are called "De Cantabrigi Antiquitatibus." His works are contained in eleven folio vols.—*Moreti.*

HENRY (de Blois) bishop of Winchester, nephew of William Rufus, and brother of king Stephen. He was an active prelate and enterprising statesman; and when the kingdom was invaded by the partisans of the empress Matilda, he joined her standard, and induced many others of the clergy to follow his example. But subsequently he changed

sides, and having laid siege to the castle of Winchester, where the empress queen and her followers had taken refuge, he attacked that fortress and the city also from his own neighbouring castle at Wolvesey, and set the city on fire, and consumed twenty churches, a number of religious houses, and other buildings. Yet though he treated the capital of his diocese with so much violence and severity, he formed a project in 1144 for erecting it into an archbishopric, and he had actually obtained, from Pope Lucius II, a pall, and an appointment of seven bishops as suffragans, but the sudden death of the pontiff probably prevented the completion of this ambitious scheme. Bishop de Blois is now chiefly known as the founder, and, perhaps, the author, of the architectural design for the church of the hospital of St Cross, near Winchester, considered by Dr Milner as having furnished the model for the distinguishing features of the Gothic or pointed style. The death of this prelate took place in 1171.—*Anglia Sacra*, vol. ii. *Milner's History of Winchester*, vol. ii.

HERITIER (NICHOLAS I') historiographer of France, and a poet, was originally in the army, but receiving a wound he was disabled for service. He was the author of some poems and of two tragedies, "Hercule Furieux," and "Clovis." He died in 1680.—His daughter, MARIE JEANNE L'HERITIER, was born at Paris in 1664. She wrote some novels, and a translation of Ovid's Epistles.—*Rees's Cyclop.*

HERMANN (JOHN FREDERIC) a German writer, born at Barr, in the department of the Lower Rhine, in 1743. He obtained various civil employments at Strasburg, and in 1788 was secretary to the chamber of fifteen, afterwards member of the council of five hundred, and at length mayor of Strasburgh. He resigned his office in 1809, and in the latter part of his life was professor of law in the university of that city, where he died in 1820. Hermann was the author of "Notice Historique, Statistique, et Littéraire sur la Ville de Strasbourg," 1818—19, 2 vols, 8vo.—*Biog. Univ. Class.*

HERMANT (GODFREY) a French ecclesiastic, was born at Beauvais in 1617, and became rector of the university of Paris. He held a canonry at Beauvais, but from this, as well as from his situation in the Sorbonne, he was excluded for some ecclesiastical dispute. He wrote "Index universalis totius Juris Ecclesiastici," fol; "Lives of the Fathers;" "Pieces against the Jesuits;" "A Defence of the Church." He died in 1690.—*Moreri*.

HERVAS (LORENZ) a Spanish writer on philology and general literature. He published many works, chiefly in the Italian language, but he is best known as the author of a "Catalogue of the Languages of the known Nations, with their Divisions and Classes," 6 vols, 8vo, which forms a part of his "Idea del Universo," (in Spanish,) the first edition of which was published at Cesena, in 1784. This catalogue, besides an introduction, contains a geographical survey of languages, treating of those of America, and

afterwards of those of the South Sea Islanders, of the Asiatics, and of the Europeans, reserving for the conclusion those of the Africans. Hervas has furnished a considerable mass of materials towards the composition of a systematic treatise on the languages of mankind; but he displays little of that clear and correct classification which the title leads us to expect; he has likewise introduced much itinerary and statistical information but little connected with his subject.—*Adelung's Mithridates*.

HEYM (JOHN) a German lexicographer, born in Lower Saxony in 1759. He was naturalized in Russia, and died in 1821 at Moscow, where he was inspector of colleges and institutes, and rector of the university. Among his works are "A complete Russian and French Dictionary," Moscow, 1796—97, 2 vols, 4to; and "An Essay towards a Geographical and Topographical Encyclopædia of the Russian Empire," Gotting, 1796, 8vo.—*Ann. Necrol. Biog. Univ. Class.*

HIGGONS (BEVIL) younger son of sir Thomas Higgons, was born in 1670. He received his education at both the universities, and then removed to the Middle Temple. He was a zealous adherent of James II. He died in France in 1735. He wrote "Historical and Critical Remarks on Burnet's History of his own Times," 8vo; "A short View of English History," 8vo; "A Poem on the Peace of Utrecht;" "The Generous Conqueror," a tragedy.—*Wood*.

HILDERSHAM (ARTHUR) a puritan divine, whose father was a near relation of cardinal Pole, was born at Steckworth, in Cambridgeshire, in 1563. He obtained a fellowship at Trinity-hall, and in 1593 he was presented to the living of Ashby-de-la-Zouch, in Leicestershire. He died in 1631. His works are, "A Treatise on the Lord's Supper;" "Lectures on John," 1628, folio; "Lectures on Psalm LI," folio.—*Clark's Lives*.

HILL, AM. (ROWLAND) was the sixth son of sir Rowland Hill, bart, the first of his family who was raised to that title. The subject of this article received his education at Eton school and St Edmund Hall, Oxford; but having at an early age adopted the principles of Calvinistic methodism, he engaged in practices inconsistent with the discipline of the established church, and was, in consequence of this conduct, expelled from the university, in 1768, together with five other students, who were charged with the same offence of assembling to pray and preach at prohibited times, and in improper places. He then procured admission into St John's College, Cambridge, where he finished his studies. Like Whitfield and Wesley, he obtained episcopal ordination; but without submitting to the discipline of the establishment. In 1783 he erected a chapel in Blackfriars Road, Surrey, and there he usually officiated during his residence in the metropolis, where he spent a part of each year, having a country-house and chapel at Wotton-under-edge, in Gloucestershire. His death took place at his

HOF

house in Great Surrey Street, Blackfriars, April 11, 1833, in the eighty-ninth year of his age. He was married to Miss Mary Tudway, the sister of Clement Tudway, Esq, formerly MP. for the city of Wells; and had no children by that lady, who died before him. His publications were numerous; and among the most popular may be mentioned his "Village Dialogues."—*Evang. Mag.*

HODGES (WILLIAM) a landscape painter, was born in London in 1744, and was a pupil of Wilson. He accompanied captain Cook in his second voyage as draftsman. He afterwards visited the East Indies, where he made some fine drawings, which were engraved and published with descriptions. He had realized a good fortune, which he lost by unfortunate speculation, which preyed so deeply upon his mind that in 1797 he committed suicide.—*Pikington.*

HOFFMANN (ERNEST THEODORE WILLIAM, OF AMADEUS) a celebrated German novel writer, who held an office at Berlin, under the Prussian government. His works are generally distinguished by an extravagance of manner which scarcely admits of description, but of which a notion may be obtained from his "Elixiers des Teufels, nachgeclassene Papiere des Bruders Medardus eines Capuziners," Berlin, 1815, 2 vols, 12mo, of which there is an English translation, entitled "The Devil's Elixir," by R. P. Gillies; and other examples of his composition may be found in Carlisle's "Specimens of German Romance." This highly talented writer was unhappily attached to festive pleasures to such an extent as proved injurious to his health, and at length occasioned his death. "The order of his life from 1816 downwards," says his biographer, "was this: on Mondays and Thursdays he passed his forenoon at his post, in the Justice chamber; on other days at home, in working; the afternoons he regularly spent in sleep, to which in summer he added walking; the evenings and nights were devoted to the tavern. Even when out in company, while the other guests went home, he retired to the tavern, to await the morning, before which time it was next to impossible to bring him home. Strangers who came to Berlin went to the tavern to see him; the tavern was his study, and his pulpit, and his throne; here his wit flashed like an aurora borealis, and the table was for ever in a roar; and thus, amid tobacco smoke, and over coarse, earthly liquor, was Hoffman wasting faculties which might have seasoned the nectar of the gods." Notwithstanding his dissipation, his official duties were to the last punctually and irreproachably performed. He wrote more abundantly than ever; no magazine editor was contented without his contributions, and he exerted himself powerfully to supply such demands. One of his most extraordinary productions is entitled "Fantasiestucke in Callots Manier, Blatter aus dem Tagebuche eines reisenden Enthusiasten"—Fancy Pieces in the Manner of Callot, Leaves from the Journal of a travelling Enthusiast,

HOL

of which an edition was published at Bamberg, in 1819, with a preface by John Paul Richter. Subsequently to the original publication of the preceding work appeared his "Nachtstucke" (Night Pieces,) herausgegeben von Verf der Fantasiestucke in Callots Manier," Berlin, 1817; two years afterwards, "Klein Zaches," a satirical production; and, between 1819 and 1821, appeared in four successive volumes, the "Serapions-bruder," containing most of his smaller tales connected together by dialogues of the Serapion-brethren, a club of friends which for some time met weekly at Hoffman's house. The "Prinzessin Brambilla," 1821, is properly another fantasy-piece; and in 1820, he published "Lebens Ansichten des Katers Murr, nebst fragmentarischer Biographie des Kapellmeisters Johannes Kreisler"—Tom-cat Murrs Philosophy of Life, which was meant as the author's master work, and a second part was printed in 1821, but the conclusion of this somewhat incomprehensible production is still wanting. Meanwhile Hoffmann's tavern orgies continued, and his health at last sunk under them. In 1819, in consequence of a renewed attack of gout, he visited the Silesian baths, which afforded him relief. After a long illness, accompanied with great suffering, which he bore with firmness and even gaiety of temper, he at length died June 24, 1822.—*Encycl. Amer. Biog. N. des Contemp. Carlsle.*

HOLLOWAY (THOMAS) an ingenious engraver, born in Broad Street, London, in 1748. He was apprenticed to a seal engraver, under whom he learnt engraving on steel; but after the termination of his indentures he applied himself to working on copper also. He then attended at the Royal Academy, where he practised drawing and modelling in wax, chiefly from the antique, availing himself at the same time of the advantage of hearing lectures of the professors, and of the use of the library belonging to that institution. At length he adopted the art of line engraving on copper, as his peculiar profession. At first he was chiefly employed on portraits and embellishments of magazines, or other subjects of inconsiderable importance; but his works were distinguished for correctness, and as he frequently made the designs for his engravings, he acquired an accuracy of eye and exactness of judgment that never failed him. The earliest undertaking of importance in which he engaged was that of making engravings to illustrate an English translation of Lavater's "Essays on Physiognomy." But his reputation is chiefly founded on his admirable engravings from the Cartoons of Raffaele, in which he was assisted by some of his pupils; and after having been engaged in the execution of this work for several years, he had nearly brought it to a conclusion at the time of his death, which took place at Coltishall, near Norwich, in February 1827. Among the productions of his skill were some elaborate engravings of portraits, particularly those of Dr Richard Price and Dr Joseph

Priestley; and he likewise exercised his talents in illustrating the publications of Boydell, Macklin, and Bowyer. He occasionally painted portraits, both in oil and crayons, and with considerable success.—*Memoir of Holloway, by one of his Executors.*

HOME (sir EVERARD, bart) sergeant surgeon to his Majesty, surgeon to Chelsea hospital, honorary professor of anatomy and surgery at the Royal College of Surgeons, VPRS, and FSA. He was the son of Robert Home, Esq., of Greenlaw Castle, county of Berwick, himself a practitioner of eminence. At an early age he adopted the profession of surgery, which he studied under the celebrated John Hunter, who was his brother-in-law; and he practised with great success in the metropolis for more than forty years. His professional publications are voluminous, and are held in high repute. Among them are his "Lectures on Comparative Anatomy," 1811, 2 vols, 4to, in which are described the preparations in the Hunterian collection, illustrated by 171 engravings. His other works consist of "A Dissertation on the Properties of Pus," 1788, 4to; an "Hunterian Oration," in honour of surgery, and in memory of those practitioners by whose labours it has been advanced, delivered in the theatre of the College of Surgeons, February 14, 1814; "Practical Observations on the Treatment of Ulcers on the Legs, considered as a branch of Military Surgery," 1797, 8vo; "Observations on Cancer," 1805, 8vo; "Practical Observations on the Treatment of Stricture in the Urethra and in the Oesophagus," 1803, 2 vols, 8vo; and "Practical Observations on Diseases of the Prostate Gland," 1811, 8vo. Sir Everard Home likewise contributed largely to the Philosophical Transactions, and produced a variety of ably-written articles for the medical periodicals of the day. He was raised to the dignity of a baronet in January, 1813, by his Majesty George IV, who also conferred on him the appointment of sergeant surgeon, in which office he was continued by the present king. For many years he was president of the Royal College of Surgeons. He died at his apartments in Chelsea College, August 31, 1832, aged seventy-six. Sir Everard married in 1792 Jane, daughter and co-heiress to the Rev. Dr. Tunstall, and widow of Stephen Thompson, Esq., by whom he had two sons and four daughters.—*Biog. Dict. of Living Authors. Ann. Biog.*

HONORIUS DE SANCTA MARIA, or BLAISE VAUZELLE, a Carmelite at Toulouse, was born at Limoges in 1651, and died in 1729. He wrote "Les Traditions des Pères et des Auteurs Ecclésiastiques sur la Contemplation," 3 vols, 12mo; "Traité des Indulgences et du Jubilé," 12mo; "Réflexions sur les Règles et sur l'Usage de la Critique," 3 vols, 4to; "Dissertations Historiques et Critiques sur les Ordres Militaires," 4to.—*Dict. Hist.*

HOOGVEEN (HENRY) a schoolmaster, was born at Leyden in 1712. In 1732 he became under-master of the school at Gorcum,

whence he removed to Woerden. He then resided severally at Culembourg, Breda, Dort, and Delft, where he died in 1794. His principal works are, "Doctrina Particularum Linguæ Græcæ," 2 vols, 4to; an edition of Vigerus de Idiotismis Linguæ Græcæ.—*Hartes de Vitæ Philologorum.*

HOPE (sir THOMAS) a lawyer, was born at Edinburgh, and in 1627 became king's advocate. He was secretly attached to the covenanters, but was created a baronet by Charles I. He died in 1646. He wrote some Latin poems, and an account of the earls of Mar; also "Minor Practices," and "Decisions."—*Gen. Biog. Dict.*

HOPE (THOMAS) a gentleman distinguished for his attachment to literature and the fine arts, which he cultivated with great success. He was descended from a Scotch family long settled at Amsterdam, noted for wealth, liberality, the splendour of their establishments, and their extensive and valuable collections of works of art. Possessing an ample fortune, he travelled, during the early part of his life, in Europe, Asia, and Africa, and having acquired a facility in drawing, he brought home a considerable quantity of sketches of architecture, sculpture, and scenery. Returning from his travels, he settled in London, where he published "A Letter addressed to F. Annesly, Esq., on a Series of Designs for Downing College, Cambridge," in which he criticised, with some severity, the designs for the erection of the college produced by Mr Wyatt, which were consequently rejected. Having purchased a large house in Duchess-street, Portland-place, Mr Hope employed his taste in finishing and fitting up the interior from his own drawings, and partly in imitation of the best specimens of art both ancient and modern. He had a country mansion at Deepdene, in Surrey, whither he removed a great number of his pictures, works of sculpture, and books, having built for their reception a library, a gallery, and an amphitheatre. In 1805 he published a folio volume, entitled "Household Furniture and Internal Decorations," illustrated with engravings from the drawings which he had made for the furniture and fitting up of his town mansion. This work was the subject of severe criticism in the Edinburgh Review; notwithstanding which it produced all the effect which the author could have expected, in occasioning an improvement of taste and design in the upholstery and interior decoration of houses. Mr Hope was a munificent patron of art and artists, and even of the humble mechanic; for he has been known to traverse obscure lanes and alleys to find out and employ men of skill and talent who were previously unknown. Among the artists whom he patronized were Thorwaldsen, the Danish sculptor, and our own Flaxman and Chantrey. The instances of his liberality were numerous, but in one instance his patronage was repaid by an act of the basest ingratitude and malicious insult. A French artist, named Dubost, being dissatisfied at the objections which

were made to a painting which he had executed, and the price which he had demanded for it, he, in revenge for his disappointment, exhibited a caricature painting, drawn by himself, which he called "Beauty and the Beast," representing a scene from a fairy tale, in which Mrs Hope, a very beautiful woman, was depicted in the character of beauty, and her husband, whose person was remarkably plain, as the beast, laying his treasures at her feet. This picture attracted such numerous spectators, that from twenty to thirty pounds a day is said to have been taken at the doors, until at length the exhibition was terminated by Mr Beresford, Mr Hope's brother, having cut the picture in pieces. For this, Dubost brought an action against him, laying his damages at 10000; but he obtained a verdict for 50 only, as the worth of the canvas and colours. In 1809 Mr Hope published "The Costumes of the Ancients," in 2 vols, royal 8vo; and in 1812, "Designs of Modern Costumes," in folio. But his pen was devoted afterwards to subjects of a more intellectual nature, and in his "Anastasius, or Memoirs of a Modern Greek," an historical and geographical romance, in 3 vols, he has presented a most accurate and interesting picture of the customs, manners, and countries of the Turks and Greeks, which evinces at once the general knowledge, the fancy, and the powers of the author. He died February 3, 1831. Since his death has been published, a curious metaphysical treatise, "On the Origin and Prospects of Man," which affords additional proof of the vigour of his mind, and the extent and profundity of his knowledge. Mr Hope married, April 16, 1806, the hon. Louisa Beresford, the daughter of lord Decies, archbishop of Tuam, by whom he has left three sons.—*Ann. Biog.*

HOPKINSON (FRANCIS) an American writer, born in Pennsylvania, in 1738. He became judge of the admiralty in his native province, and afterwards judge of one of the courts of justice in the United States. He died in 1791. Besides some political pamphlets in favour of republicanism during the war of independence, he was the author of some ludicrous poems, and of papers in the Transactions of the American Philosophical Society. His "Miscellaneous Works" appeared in 1792, 3 vols, 8vo.—*Reuss. Biog. Univ. Class.*

HORBERG (PEREN) an eminent Swedish painter, who died at an advanced age in 1814. He was the son of a peasant in Sudermania; and native taste having induced him to apply himself to the study of the fine arts, he went to Stockholm, where his talents procured him efficient patronage. Gustavus IV gave him a pension of 150 rix-dollars.—*Biog. Univ. Class.*

HOUËL (J. P. L. L.) a painter and engraver, born at Rouen in Normandy in 1735. He studied painting in the school of Casanova, and engraving under Le Mire. Among his works are "Le Voyage Pittoresque de Sicile, de Malte, et de Lipari," with 264 plates

engraved by him, 4 vols, folio; and "Histoire Naturelle des deux Eléphants, mâle et femelle, du Muséum de Paris," with 18 plates, 4to. This artist, who was a member of the Academy of Painting, died at Paris in 1813.—*Biog. Univ. Class.*

HOWARD (SAMUEL) a musical composer, was brought up in the chapel royal. He took his degree of doctor at Cambridge in 1768. His ballads, for which he is chiefly distinguished, were once very popular. He died in 1783.—*Burney's Hist. of Music.*

HUBER (JOHN) a member of the council of two hundred at Geneva, was born in that city in 1722. He manifested from his youth a taste for the arts of design; but neglecting the more important departments of those arts, he attached himself to the study of one in which he was not likely to encounter much rivalry. This was the art of cutting profiles. After having acquired an extraordinary degree of dexterity in forming profiles, he studied the art of painting, and with so much success as to have united in his compositions the truth and nature of Vandyck with the dramatic conception of Greuze. The most important of Huber's designs relate to Voltaire, with whom he was intimate, and whose private life and manners he has illustrated by his pencil. He seems to have been an eccentric character, and was fond of amusing himself by contriving mystifications at the expense of his acquaintance. Among the schemes which occupied his attention was a project for guiding the course of air balloons by the flight of large birds, on which he published a tract, with plates designed by himself, in 1784. His death took place at Geneva in 1790.—*Biog. Univ.*

HUE (FRANCIS) born at Fontainebleau in 1757, was, at the commencement of the French Revolution, first valet-de-chambre to the dauphin, and he distinguished himself by his inviolable fidelity to the royal family under the most trying circumstances. He lived in the family of the duke of Angouleme from 1795 to 1814, when Louis XVIII made him his first valet-de-chambre. He died in 1819. He was the author of a work entitled "Dernières Années du Règne et de la Vie de Louis XVI," which has been translated into English.—*Biog. Univ. Class.*

HUMBERT (—) a French general, was born about 1765, at Rouvroy, in Lorraine. He belonged originally to one of the lowest classes in society, and owed his elevation to his talents. After having acquired distinction as commander of a brigade, under the orders of general Hoche, in the expedition against Ireland in 1798, he joined the army sent to St Domingo under general Leclerc, when he made himself master of Port au Prince. The following year he returned to France with the widow of the commander-in-chief, Pauline, the sister of Napoleon. The report of his extreme intimacy with that lady, and the independence of his political opinions, gave offence to the French emperor, who banished Humbert to Brittany, whence he made his

escape to the United States of America. He subsequently acted an important part in the insurrection of the Spanish colonies, and commanded a party of the insurgents in 1816. His death took place at New Orleans, in the beginning of 1823.—*Biog. Univ. Class.*

HUME (PARRICK) earl of Marchmont, a distinguished Scottish statesman, who was born in 1641. Before he was raised to the peerage, he was a member of parliament in Scotland, in 1665, and having opposed the tyrannical measures of the earl of Lauderdale, he was thrown into prison. Subsequently becoming connected with some of the persons who were involved in what was called the Rye-house plot, he consulted his own safety by taking refuge, with his family, in Holland, where he remained, in poverty and exile, till the death of Charles II. He then joined in the invasion of Scotland under the earl of Argyre; and on the failure of that ill-concerted plan, he was fortunate enough again to make his escape to Holland. He continued there till the revolution of 1688; and he then became a member of the Scottish convention that gave the crown of Scotland to William III, in addition to that of England. For his services, he was made lord chancellor of Scotland, and created earl of Marchmont. This skilful and active politician was afterwards one of the most influential agents in carrying into effect the Union between England and Scotland. His death took place in 1724. He was the author of a narrative of the expedition under the earl of Argyre; and his correspondence has also been published.—

HUME (ALEXANDER) earl of Marchmont, son of the preceding, was born in 1675, and was educated for the Scottish bar. He became a lord of Session before he had obtained the age of thirty, and for some years he was actively engaged both in judicial and political affairs. In the rebellion of 1715 he raised a battalion of foot, and two troops of horse, and was soon after employed as a diplomatist, in which post he continued for many years. In 1733 he joined the opposition against Robert Walpole, on his excise scheme, chiefly with the view of obtaining the removal of lord Ilay from the government of Scotland; but the affair terminated in the loss of his own seat as a representative peer, at the next election. He died in 1740. This nobleman was distinguished as one of the friends and correspondents of Pope, Swift, and other celebrated persons.—**HUME (HUGH)** the third earl of Marchmont, was born 1708. During the life of his father, the subject of the preceding article, while he held by courtesy the title of lord Polwarth, he had a seat in the House of Commons, where he actively opposed the measures of Walpole, who regarded him as one of his most formidable adversaries. His succession to the earldom prevented him from sitting in the lower house of parliament, and some years elapsed before he could get returned as one of the sixteen Scottish peers. The formation of what was called the broad-bottomed Administration, in 1744, removing

all impediments, he soon came into office, and was finally made keeper of the great seal in Scotland, and continued in parliament till 1784. This nobleman died in 1794; and bequeathed the papers belonging to his family to the right hon. George Rose, by whose son, sir George Rose, bart. they have been recently published, in 3 vols, 8vo.—*Month. Mag.*

HUMPHREYS (JAMES) an eminent lawyer and juridical writer, who was a native of Montgomeryshire. He was articled to an attorney at Worcester, and, on quitting the office, he entered at Lincoln's-inn, and became a pupil of Mr Charles Butler, the celebrated conveyancer. Commencing practice for himself, he soon acquired reputation, and was employed in affairs chiefly relating to property in Wales and in the west of England, seldom being applied to in metropolitan cases. His political opinions were of a liberal cast, and he was intimate with many of the popular leaders, as Fox and Romilly, Henry Clifford and Horne Tooke; and he was a member of the Fox club, and likewise of Brookes's. He established his reputation by the publication of his "Observations on the English Law of Real Property," 1826, which however involved him in a long and acrimonious controversy, in the course of which he published a "Letter to Sir Edward Sugden;" and a "Letter to the Editor of the Jurist." He likewise wrote the article "Devise," in the Supplement to Viner's Abridgement of English Law; and he delivered lectures at the London University. His death took place November 29, 1830.—*Law Mag. Gent. Mag.*

HUNTINGFORD (GEORGE ISAAC) a learned prelate, distinguished as a classical scholar, who was a native of Winchester. He received his education at Winchester College, and New College, Oxford, where he obtained the degree of MA. in 1776; and he subsequently became an assistant under Dr Joseph Warton, in the seminary in which he had been educated. In 1781 he printed for private circulation "Greek Odes," which he was induced to publish the following year, under the title of "Metra Monostrophica," 8vo; and he also produced a very useful work, entitled "An Introduction to the Writing of Greek," in two parts, 8vo. At this period he held a fellowship at New College, in 1789 he was appointed warden of Winchester College, and in 1793 he accumulated the degrees of BD. and DD. Through the patronage of lord Sidmouth, who had been his pupil at Winchester, he was promoted in 1802 to the bishopric of Gloucester, whence in 1815 he was translated to that of Hereford. Dr. Huntingford, who was a fellow of the Royal Society, died at Winchester College, April 29, 1832, in the eighty-fourth year of his age. Among his published works, besides those already noticed, are "An Apology for the Monostrophics," 1784, 8vo; "Ethic Sentences, by the writing of which Boys may become accustomed to the Greek characters," 1788, 4to; "Twelve Discourses on different Subjects," 1795, 8vo; a second volume of

HUS

"Discourses," 1797; "A Call for Union with the Established Church," 1800, 8vo; "The Petition of the English Roman Catholics considered, in a Charge delivered at the Triennial Visitation in June, 1810," 8vo; and a number of single sermons.—*Biog. Dict. of Living Authors. Edit.*

HUSKISSON (WILLIAM) an eminent statesman and political writer, who was the eldest son of a gentleman possessed of landed property in Staffordshire. He was born in 1770, and his father becoming a widower, and marrying a second time, the son, at the age of thirteen, was consigned to the care of his relation, Dr Gem, a physician retired from practice, who resided at Paris. Huskisson's early studies were superintended by that gentleman, whose instructions were well seconded by his own activity and diligence. He necessarily imbibed something of the spirit of the times, and of the society in which he was placed, the character of which was much influenced by his uncle's acquaintance with the American minister Jefferson, and other friends of freedom. Huskisson was present at the taking of the Bastille, and he became a member of the club of 1789, the specific object of which was the support of a constitutional monarchy; and this circumstance appears to have given rise to the imputation of his having been a member of the Jacobin Club. In the society to which he belonged, he distinguished himself by a speech, denouncing the consequences likely to occur from an excessive issue of assignats, which effort of oratory brought him into general notice, before he had reached the age of twenty. In the same year (1790) he obtained an introduction to the marquis of Stafford, then lord Gower, who was English ambassador at Paris, and in a few months he was appointed private secretary to that nobleman, with whom he remained till 1792, when the occurrences in the month of August that year obliged him to quit Paris. Returning to England with the ambassador, he became known to Pitt and Dundas, and he was soon after placed at the head of the Alien Office, for the management of which he was well qualified, by his acquaintance with the French language, and the general information which he had obtained during his residence abroad. After a close attention to the duties of his post for nearly three years, he was removed to that of under secretary in the war and colonial department, where he succeeded sir Evan Nepean. From this period he devoted himself wholly to politics, and the following year he was brought into parliament for the borough of Morpeth. About this time he succeeded, on the death of his uncle, Dr Gem, to an estate at Eartham, in Sussex, which had been the property of Hayley the poet. In 1799 he married Eliza Emily, the daughter of admiral Milbanke; and in 1801, Mr Dundas procured for that lady the reversionary grant of a pension of 615*l.* per annum. On Mr Pitt's retirement from office, Huskisson also withdrew, with a pension of 1200*l.* a year.

HUT

At the general election in 1802, he was an unsuccessful candidate for Dover; but in 1804, he obtained a seat for the borough of Liskeard. At a later period he was returned for Chichester, through the influence of the duke of Richmond. In the House of Commons he frequently spoke on financial affairs, concerning which his information was extensive, if not profound. When Mr Pitt returned to office, in May 1805, Huskisson was again actively employed in the public service. He brought up the report of the loyalty loan bill, the postage duty bill, and the additional house duty bill; and he was appointed joint secretary of the treasury, which office he quitted on the death of Mr Pitt, but resumed it on the resignation of the Whig ministry, to whose overthrow he contributed. In 1809 he retired from office with Mr Canning; but when that gentleman went to Lisbon, he accepted the post of surveyor general of the Woods and Forests. When Mr Canning was appointed to the government of India, Mr Huskisson succeeded him as member of parliament for Liverpool; and he was placed at the head of the board of trade, when the latter became prime minister. Under the duke of Wellington, he for a time held the office of colonial secretary of state, which he was obliged to resign, in consequence of his vote against the minister, relative to the transfer of the elective franchise from the borough of East Retford to the hundred of Bassetlaw. His death, which took place September 15, 1830, was the result of a most shocking accident, at the opening of the Liverpool and Manchester rail-road, when a vast concourse of people had assembled, among whom was the duke of Wellington; for whom and other distinguished persons locomotive carriages were prepared to convey them along the rail-way. At Park-field, seventeen miles from Liverpool, the carriages stopped for a short time, for a fresh supply of fuel, when Mr Huskisson and others having alighted, that gentleman, who was standing on the road, was knocked down by one of the steam carriages in its passage, and the wheel going over his thigh, occasioned a dreadful compound fracture, which caused his death in the course of the following night. His funeral, which was attended by a great number of persons, took place at Liverpool, on the 24th of the same month. Mr. Huskisson was the author of a pamphlet entitled "The Question concerning the Depreciation of our Currency stated and examined," 1810, 8vo. And his very able speeches, with an account of his life, have been published in 3 vols, 8vo.—*Life aforesaid. Month. Mag. Georgian Era.*

HUTCHINS (THOMAS) geographer to the United States, was born at New Jersey about 1730. He entered into the British army in the American war, and distinguished himself against the Indians in Florida. After having obtained the command of a regiment, he went to London, to vindicate himself against the charge of having corresponded with Dr Franklin, then American agent in France. After

recovering his liberty, he joined the army of general Green, at Charlestown. He was nominated geographer-general to the United States; and he died at Pittsburgh in 1789. He published "An Historical Sketch of the Expedition of Bouquet against the Indians of Ohio in 1764;" "A Topographical Description of Virginia, Pennsylvania, Maryland, and Carolina," with maps, London, 1778; "An Historical Account and Topographical Description of Louisiana, West Florida, and Philadelphia," 1784.—*Biog. Univ. Class.*

HUTCHINSON (THOMAS) a native of Boston, in North America, who became lord-chief-justice of the province of Massachusetts, and then lieutenant-governor, from 1758 to 1770. He was afterwards governor, and was superseded by Gage in 1774, when he went to England. He died at Brompton in 1780. Governor Hutchinson was the author of a "History of the Colony of Massachusetts Bay, from the first settlement thereof in 1628, to the Year 1750," Boston, 1760—67, 2 vols, 8vo, reprinted in 1775; "A Collection of Original Papers relative to the History of the Colony of Massachusetts," 1769, 8vo.—*Ibid.*

HUTCHINSON (JOHN HELEY) earl of Donoughmore, born May 15, 1757, was the second son of the Right Hon. John Heley Hutchinson, Secretary of State for Ireland. After being educated at Eton, where he had the advantage of a private tutor, he repaired to the college of Dublin, of which his father had been provost. In 1774, he was appointed cornet in the 18th dragoons; in 1775, a lieutenant; and in 1776, he was promoted to a company in the 67th regiment of foot. In 1777, captain Hutchinson was elected a member of the Irish parliament for Cork, when he distinguished himself as a public speaker. In 1781, he obtained a majority; and in 1783, a lieutenant-colonelcy in the 77th. Having studied tactics at Strasburgh, he now visited the continent with the enlarged views of one to whom fortune seemed to promise extensive public employment. At the commencement of the French revolution, he found means for obtaining access to the French camp at its most interesting period, when he saw Lafayette compelled to leave those troops of which he had been the favourite, and seek safety in flight. Having scrutinized the state of the French army, he then had the fortunate opportunity to examine that which was marching to oppose it, under the duke of Brunswick, and to calculate upon the result. At the commencement of hostilities with France in 1793, he raised a regiment, and, in 1794, obtained the rank of colonel. He served during the campaign in Flanders as extra aid-de-camp to Sir Ralph Abercrombie; and subsequently in Ireland during the rebellion; and he was second in command at the battle of Castlebar. Having been commander in the

Connaught district, the inhabitants presented him with a valuable sword, in acknowledgment of their gratitude and esteem. In 1796 he obtained the rank of major-general; and in 1799 served as such in the expedition to the Helder, when lord Craven being disabled, major-general Hutchinson led on his brigade in a gallant style against the enemy, on which occasion he was wounded. In the expedition to Egypt, in 1801, he was appointed second in command to Sir Ralph Abercrombie. The British army landed in Egypt on the 8th of March in that year, and after a contest with the French troops on the 13th, the British took a position about four miles from Alexandria. On the 21st of the same month they were attacked by the French under general Menou, whose force amounted to eleven or twelve thousand men. In the battle of Alexandria, which followed, the French were defeated with the loss of more than 3000 men, killed, wounded, or taken prisoners, while one of their general officers fell in the field, and two died of their wounds shortly after. But the British general Sir R. Abercrombie was mortally wounded in the action, and died on the seventh day afterwards. The command of the army consequently devolved on major-general Hutchinson, who receiving reinforcements, gradually advanced upon the enemy, and having pursued them to Cairo, a capitulation took place, and the expedition terminated in an agreement on the part of the French to evacuate Egypt. For his gallant and able services in this campaign, the general twice received the thanks of both houses of parliament; was nominated a knight of the bath, on the 30th of May 1801; and raised to the peerage as baron Hutchinson of Alexandria, and of Knocklofty, in the county of Tipperary, by patent dated December 16, in the same year, with the annual pension of 2000*l.* attached to the title. In November 1806, he was despatched on an extraordinary mission to the Prussian and Russian armies; afterwards to the court of Petersburg; and, at a later period of his life, to meet queen Caroline at St Omer's, as the personal friend of the late king, who, many years before, appointed him one of his council as prince of Wales. He was promoted to the rank of lieutenant-general in 1803; in 1811, made colonel of the 18th regiment of foot; and in 1813, he became a full general. In August 1825, he succeeded his brother as earl of Donoughmore, viscount Surdale, and baron Donoughmore, in Ireland, and viscount Hutchinson in the peerage of the united kingdom, all which titles had been conferred, with remainder to her descendants, on his mother, Christiana baroness Hutchinson. The earl of Donoughmore's death took place at his seat of Knocklofty, in the county of Tipperary, July 6, 1832.—*United Service Journal. Gent. Mag.*

IBBETSON (AGNES) a lady distinguished for her researches concerning natural history and other branches of science. She was the daughter of Andrew Thomson, Esq. of London, and was married to Mr Ibbetson, a barrister, by whom she was left a widow. Having received a liberal education, and gained a knowledge of the French and Italian languages, she devoted her leisure to the study of nature, and her attention was directed to the sciences of astronomy, geology, mineralogy, and botany, the last mentioned of which, and especially that department of it relating to the physiology of plants, formed the favourite object of her inquiries. She made some interesting microscopical experiments on the structure of vegetables, which led to discoveries of which she published an account in Nicholson's Philosophical Journal, whence they have been transferred to the Edinburgh Encyclopædia; and she also was a contributor to the Annals of Philosophy and other scientific journals. Her death took place at Exmouth, in Devonshire, in February 1823, in the sixty-sixth year of her age.—*Gent. Mag.*

INNES (LOUIS) a Catholic priest, of a Scottish family, born about 1650. He became principal of the Scotch college at Paris, and held that office when James II sought an asylum in France. Innes was made almoner to the queen, and secretary of state to the expatriated monarch. To him is ascribed the composition of the "Memoirs" of James II, published by Dr J. S. Clarke, London, 1816, 2 vols, 4to, and which were translated into French.—

THOMAS INNES, brother of the preceding, succeeded him at the Scotch college, and died in 1744. He was the author of "A Critical Essay on the Ancient Inhabitants of the Northern Parts of Britain," London, 1729, 2 vols, 8vo.—*Biog. Univ. Class.*

INVEGES (AUGUSTIN) a jesuit, and professor of philosophy and theology, was born at Siacca in Sicily in 1595. He quitted his order, and died at Palermo in 1677. He was the author of "Historia Paradisi Terrestria," 4to; "La Cartagine Siciliana," 4to; "The History of Cacamo, in Sicily," 4to; "The History of Palermo," 3 vols, folio. In the History of Cacamo he applauds the Sicilian vespers as a patriotic and glorious act.—*Diet. Hist.*

IRAIL (AUGUSTIN SIMON) canon of Marischal, was born at Puy, in Velay, in 1719, and died in 1794. He was the author of a tragedy in prose, entitled "Henri IV et la Marquise de Verneuil;" "Histoire de la Réunion de la Bretagne à la France;" "Querelles Littéraires, ou Mémoires pour servir à l'Histoire des Révolutions de la République des Lettres," 4 vols.—*Ibid.*

IRNERIUS or **WERNERUS**, a civilian, was a native of Bologna in the eleventh century. He acquired great reputation as a teacher of the law, and had a number of disciples, who were called glossators, Irnerius himself having the title of *Lucerna Juris*. Through his means the Justinian code was restored, and he first introduced the form of creating doctors into the universities. He died about 1145.—*Moreri.*

J A C

JACKSON (ARTHUR) a nonconformist divine, was born in 1593 at Little Waddingfield in Suffolk, and was educated at Trinity college, Cambridge. On taking orders he was lecturer of St Michael's, Wood-street; he afterwards had the living of St Faith under St Paul's, but was ejected in 1662. He was the enemy of Cromwell, and was imprisoned for refusing to give evidence on the occasion of Love's plot. He died in 1666. He wrote "Annotations on the Bible," 4 vols, 4to.—*Calamy.*

JACKSON, RA. (JOHN) an eminent portrait-painter, born at Lastingham, in the North Riding of Yorkshire, May 31st, 1778, whose father was a tailor, and he was apprenticed to the same trade. Very early in life he evinced a strong taste for painting, and before the term of his indentures expired, he found opportunities for the indulgence of his propensity for the art, and had sketched some portraits, which exhibited a talent beyond

J A C

what might have been expected from one entirely self-taught. These displays of his abilities procured him the protection of Sir George Beaumont, by whose means he was released from his apprenticeship, and encouraged to devote himself to painting. Sir G. Beaumont also advised him to make an attempt to paint in oil, and furnished him with a portrait as a model to copy from. He succeeded in the attempt, and after making some portraits of members of the family of lord Mulgrave, he removed to London, to study at the Royal Academy; and during the period of his attendance there he was supported by the liberality of his former patron. Having accomplished the term appropriated to study, he commenced portrait-painter in the metropolis. For some years, however, his productions obtained for him no great distinction, the field which he had chosen being preoccupied by Hoppner, Beechey, Opie, Owen, Phillips, Lawrence, and other artists of high reputation.

N

APP. BIOG. DIOT.

At that period, Jackson, though not distinguished as a painter in oil, was much noted for the excellence of his portraits in water colours, and his practice in this department was extensive and productive of a very handsome income. Many of the heads engraved in Cadell's splendid publication, "Portraits of Illustrious Persons of the Eighteenth Century," were from drawings by Jackson. He determined, however, to make himself master of painting in oil, and, relinquishing the practice of water colours, soon accomplished his object. The tact with which Mr Jackson copied the works of the old masters surprised his contemporaries: his imitations were facsimiles of their productions. Among his works of the highest order may be mentioned portraits of the Marquis of Chandos, represented in the costume of an officer of the hussars; a whole length of Earl Fitzwilliam; portraits of the bust of Thomas Stothard, Henry Bone, John Flaxman, two portraits of John Soane, one of the Rev. W. Holwell Carr, and a fine portrait of Baron Denoyers. On the 6th November, 1815, Mr Jackson was elected an associate of the Royal Academy, and on the 10th February 1817 a Royal Academician. In 1816 he accompanied general Phipps in a tour through Holland and Flanders; and in 1819 he travelled through Italy to Rome, with Mr Chantrey, the sculptor. At Rome he was chosen a member of the academy of St Luke. This distinguished artist died June 1st, 1831, at his house at St John's Wood, near London. He was twice married, and left children by both his wives. Jackson, says a writer in the *Athenæum*, occupies a place between the fine elegant detail of Lawrence and the vigorous generalities of Raeburn; or as others word it, though perhaps less truly, he is a disciple of the school of Reynolds, and one of the cleverest of its followers. Where thought and intelligence were required he readily supplied them; he rose and fell with his subject, and may be considered as one of the most honest of all the children of flattery. He had an uncommon readiness and skill of hand, a rapid felicity of finish, which enabled him to dash off at a few sittings whatever he undertook; his colouring was deep, clear, and splendid; and in this he more resembled Reynolds than any artist since his day.—*Ann. Biog.*

JACKSON (JOSEPH) a letter-founder, was born in 1733 in London. He served his apprenticeship to Caslon, but making great improvements in casting types he was enabled to set up for himself in Dorset-street, where he died in 1792. He cast the types for the Alexandrian New Testament, and for the Domesday Book.—*Nichols's Bowyer.*

JACKSON, MD. (ROBERT) inspector of military hospitals, and for many years chief of the medical department of the army in the West Indies. Having completed his professional education, he went to Jamaica in 1774, where he employed with success cold affusion in the cure of fever. In 1778 he served as a regimental surgeon in North America, and on

returning to England he settled as a physician at Stockton in the county of Durham. On hostilities with France taking place in 1793, he again engaged in the army service, and was employed for many years on the continent and in the West Indies. At length he retired with a pension of 200l. a-year. His death took place at Thursty, near Carlisle, April 6, 1827, at the age of seventy-six. He was the author of several important medical works, among which are a treatise "On the Fevers of Jamaica, with Observations on the Intermittents of America," 1795, 8vo; "An Outline of the History and Cure of Fever, Endemic and Contagious," 1798, 8vo; "Remarks on the Constitution of the Medical Department of the British Army," 1803, 8vo; and "An Exposition of the Practice of affusing Cold Water on the Body as a Cure of Fever," 1808, 8vo.—*Gent. Mag.*

JACOBI (FREDERIC HENRY) a distinguished German philosopher, who was born at Dusseldorf, in 1743. He was the son of a respectable merchant, and was himself designed for a mercantile employment; and after having studied at Geneva he returned home with reluctance to take the charge of his father's business. After a time he obtained an appointment at court, which enabled him to relinquish commercial pursuits. In 1779 he was sent to Munich, where he fell into disgrace, in consequence of his exposure of abuses in the Bavarian system of commercial taxation. He had married a lady of Aix-la-Chapelle, to whom he was much attached, and her death interrupted the happiness which he had for a time enjoyed at his country seat at Pempelfort. He then visited Weimar, where he saw Goethe and Herder, and he subsequently resumed his studies. In 1785 he published "Letters on Spinoza," and from that period he was much occupied with speculations on metaphysical theology. In 1794 he removed from Dusseldorf to Holstein, in consequence of the effect produced on the country by the French revolution. In 1801 he went to Paris, but soon returned to Holstein, where he intended to pass the remainder of his life, but in 1804 he received an invitation to go to Munich, where he was appointed president of the newly founded Bavarian Academy. He retired from this office at the age of seventy, retaining however his salary; and he died March 10, 1819. Jacobi has been termed the "German Plato;" his views were alike opposed to those of the dogmatic Mendelssohn, the critical Kant, the idealizing Fichte, and the pantheistic Schelling. Among his writings are "Woldemar, a philosophical novel," 1794; "David Hume on Belief, or Idealism and Realism;" and "Sendschreiben an Fichte," Hamb. 1799.—**JACOBI (JOHN GEORGE)** brother of the preceding, an eminent poet, who was born in 1740. He studied theology in 1758 at Gottingen and afterwards at Helmstadt; and became professor of philosophy and rhetoric at Halle, where he published the "Iris," a periodical for ladies, 1774—76. Joseph II appointed him professor of the

belles lettres in the university of Freyburg in the Brisgau in 1784. From 1795 to 1800 he published the "Ueberflussiger Taschenbuch;" and from 1803 to 1807, the *Iris*. He died January 4, 1814. A complete edition of his works appeared at Zurich, 7 vols, 8vo.—*Encycl. Amer.*

JACQUES (MATTHEW JOSEPH) a learned French ecclesiastic, born in 1736. He became professor of philosophy and mathematics at Lons le Saulnier, and afterwards at Besançon. In 1791 he emigrated, and did not return to France till after the Concordat. He died in 1821, professor of theology in the university of Lyons. Among his works are, "Prælectiones de Deo;" "Prælectiones de Gratia;" and "Prælectiones de Scriptura Sacra;" "Preuves Convaincantes de la Vérité de la Religion;" besides treatises on grammar and mathematics.—*Biog. Univ. Class.*

JAMES (JOHN THOMAS) bishop of Calcutta, was born 1786. He received his early education, partly under his father, at the grammar school of Rugby, and partly at the Charter-house. While young he displayed a strong taste for drawing, and in 1803 he obtained from the Society of Arts a prize medal for a draught of Winchester cathedral. His inclination would have led him to devote himself to the sea service, but in compliance with the wishes of his friends, he was induced to adopt the clerical profession, and in 1804 he entered at Christchurch college, Oxford, where he obtained a studentship. He took the degree of BA. in 1807, that of MA. in 1810, after which he acted for some time as a college tutor; but in 1813 he left the university to make the tour of the north of Europe with Sir James Riddell. On his return to England he published an account of his travels, under the title of "A Tour through Germany, Sweden, Russia, and Poland, in 1813—14," 1819, 2 vols, 8vo; and some time afterwards he published illustrative sketches of scenery, engraved and coloured by himself. In 1816 he visited Italy, to study the works of art in that country; and the result of his observations afterwards appeared in his account of the Italian school of painting, which was followed by another publication on the French, Dutch, and German schools of painting. He meditated the composition of a similar work relative to the state of painting in Spain, France, and England, but circumstances prevented him from executing it. Having taken holy orders soon after his return from Italy, he obtained the small vicarage of Flitton cum Selsoe, in Bedfordshire; and in 1826 he published a tract entitled the "Semi-Sceptic, or the Common Sense of Religion considered." On the death of bishop Heber he was raised to the see of Calcutta, and having received the degree of DD. from the university of Oxford, he embarked for India, in July 1827. Like his predecessors, he soon fell a victim to the insalubrity of the climate, and the fatigues of the episcopal duty of his extensive diocese, his death having taken place August 23, 1829.—*Memoirs of Bp. James of Calcutta. Georgian Era.*

JAMES (WILLIAM) an industrious writer who employed his talents on an important portion of our national annals. He published successively parts of a valuable work, which was reprinted under the title of "The Naval History of Great Britain, from the Declaration of War by France in February 1793 to the Accession of George IV in January 1820; a new edition, with considerable additions and improvements, including Diagrams of all the principal actions," London, 1826, 6 vols, 8vo. The materials for this work were procured from the collection of ships' log-books, preserved at Somerset House, from the private journals of various naval officers, and from other more accessible sources. This history is rendered peculiarly useful through the industry and research of the writer, but being too free and unguarded in respect to circumstances which bore hard upon the professional character of many living naval officers of reputation, the author was involved in one action at law, and much controversy of a very unpleasant nature. He derived a very inconsiderable emolument from his labours, and died in embarrassed circumstances, May 28, 1827.—*Gent. Mag.*

JARDINE (GEORGE) professor of logic in the university of Glasgow, died January 28, 1827, in the eighty-fifth year of his age. He was appointed to the professorial chair in 1774, soon after which he introduced into the mode of public teaching improvements which rendered his class a model of academical instruction, and communicated interest to a subject usually reckoned among the most uninviting branches of study. Professor Jardine was the author of a treatise on the philosophy of mental operations, 8vo.—*Edinburgh Mag. Lit. Gaz.*

JENKINSON (ROBERT BANKS) earl of Liverpool, son of the first earl of that title, an English statesman, who was born June 7, 1770. He was educated at the Charter-house school, and Christchurch college, Oxford, where he became acquainted with George Canning. After quitting the university, he visited the continent, and was at Paris in 1789, at the time of the destruction of the Bastille. Returning to England in 1790, he was elected a member of Parliament for the borough of Rye, some months before the attainment of his majority. The interval between his election and his taking his seat, in 1791, was occupied in another continental tour. On the 27th February 1792, he delivered his maiden speech, in opposition to the resolutions of Mr Whitbread, respecting the war between the Russians and the Turks; and he is said to have displayed on this occasion profound knowledge of the subject, strength of argument, and perspicuity of language. In April 1793 he was appointed commissioner of the Board of Control for the affairs of India; in 1794 he was made commander of the Cinque Ports Cavalry; and in 1796 he became master of the mint, a privy councillor, and one of the commissioners for trade and plantations. He was an advocate

for the suspension of the Habeas Corpus Act; he defended a grant of 300,000*l.* to Portugal; and he advocated the liberties of Switzerland. After having held the office of secretary of state for foreign affairs under Mr Addington, he removed to the home department when Mr Pitt returned to power, in 1804. He was summoned to the House of Peers by writ, as baron Hawkesbury in 1806, during the life of his father; and he contributed greatly to the passing of the Additional Force Bill, by the Lords, shortly after. On the death of Pitt, he was offered the premiership, which he declined; but on the dismissal of the ministry which had been formed under Fox and Grenville, he resumed his former station. In December 1808 he succeeded to the earldom of Liverpool, and on the assassination of Mr Percival, in 1812, he, at the request of the Prince Regent, became prime minister. During this part of his political career, he opposed the claims of the Roman Catholics, though he was willing to make concessions to the dissenters. He had the good fortune to be at the head of affairs at the period of the successful termination of the long war with France; but he exposed himself to a considerable share of obloquy by his proceedings against queen Caroline, in 1820,—his attempt to carry a Bill of Pains and Penalties against her being as much condemned by her partisans, as his subsequent abandonment of that measure was by her enemies. He continued to hold his high office till 1827, when he was attacked with a fit of apoplexy, which so incapacitated him for business, that it was thought necessary to appoint a successor, and Mr Canning, accordingly, was made premier April 10. After lingering some months in a state of mental weakness, lord Liverpool died December 4, 1828. The earl of Liverpool was more celebrated for calm good sense, moderation, and the art of qualifying opposing politics into a species of practical compromise, than for great or commanding talent. Under his premiership, however, many strong opinions were, like that of Catholic emancipation, gaining great strength, a result often produced by systems of political neutralization, which, as dependent upon persons, can only be temporary while the movement of events and opinions is incessant, and must necessarily in the end prevail.—*Month. Mag. Georgian Era.*

JEUFFROY (R. V.) an engraver of gems, member of the French Institute, who was born in one of the lowest classes of society at Rouen, in 1749. In his earliest studies he had no other assistance than his own taste, and while very young he succeeded in perfecting a very exact imitation of an engraved precious stone which had accidentally come into his possession. He acquired skill in designing; and travelling to Italy for improvement, he remained for some years at Rome, where he became an assistant to Pickler, who sold the productions of the young artist as antiques. Returning to Paris, he was made director of the school of gem engraving, at the institution

for the deaf and dumb. His death took place near St Germain-en-Laye in September 1826. Jeuffroy excelled especially in engraving female heads. His principal works include portraits of madame Despremier, as Minerva; madame Regnault de St Jean d'Angely; and Mrs Cosway, coiffée en Bacchante; a head of Regulus; and the portraits of Mirabeau and Dancarville. In the royal cabinet are an engraved gem, said to have been executed in one night, the subject of which is entitled *Le Vainqueur buvant dans une Coupe*; and a Medusa, en creux, on an amethyst, imitated from the ancient work of Solon. He also engraved medals, among which are the heads of the three consuls, the Venus de Medicis, and the prison of the Temple.—*Biog. Univ. Class.*

JODRELL (RICHARD PAUL) a dramatic writer and classical critic. He was born in 1745, and was the son of a gentleman who filled the office of solicitor-general to Frederic prince of Wales. He was educated at Eton school and Hertford college, Oxford; and some of his early compositions appeared in the "*Musæ Etonienses*." Among his dramatic productions may be mentioned "*A Widow and no Widow*," a farce, 1780, 8vo; "*Seeing is Believing*," in one act, 1786; "*The Persian Heroine*," a tragedy not acted; and "*The Disguise*," a comedy. He was also the author of "*Illustrations of Euripides*," 1781—1790, 2 vols, 8vo. In 1772 Mr Jodrell was chosen a fellow of the Royal Society, and of the Society of Antiquaries in 1784, he was also created DCL. at Oxford in 1793. He was a member of the club at the Essex Head in the Strand, founded by the friends of Dr Johnson. He died January 26, 1831.—*Ann. Biog. Cabinet Ann. Reg.*

JOHNSTONE, DD. (BRYCE) an eminent Scottish divine, was born at Annan, in Dumfriesshire, in 1747. His father, John Johnstone, Esq. repeatedly filled the office of provost, or chief magistrate, and was much respected for his fidelity and uprightness in that station. He married Elizabeth, daughter of the Rev. Thomas Howie, minister of Annan, by whom he had eight sons and two daughters. Bryce, the youngest of the sons, received the elementary principles of his education at the parochial school. In 1762 he entered on his academical studies at the university of Edinburgh. In 1771 he was appointed minister of Holywood. In 1786 he published a sermon, entitled "*The Purpose for which Christ came into the World*;" and in the same year the university of Edinburgh unanimously conferred on him the degree of doctor in divinity. In 1794 appeared his "*Commentary on the Revelation of St John the Divine*," 2 vols, 8vo. In 1797 he published a sermon "*On the Divine Authority and Encouragement of Missions from the Christians to the Heathens*;" and in 1801 "*An Essay on the Influence of Religion on Civil Society and Civil Government*." Dr Johnstone was among the first to second Sir John Sinclair's patriotic views in drawing up the statistical account of Scotland; and from the materials furnished by him the account of

Holywood was prepared, which, with those of three other parishes, were circulated as specimens of the intended publication. In the year 1794 he drew up for the Board of Agriculture "A General View of the Agriculture of the County of Dumfries, with Observations on the Means of its Improvement." He was also consulted by them on the best means of preventing a return of those calamities which had been felt in the years 1799, 1800, and 1801. As a landed proprietor being associated with the freeholders of his native country, he had opportunities of promoting its general improvement and good government. He died in 1805, leaving a volume of sermons prepared for the press, which were published at Edinburgh in 1807, with an account of the life, character, and writings of the author, by his kinsman the Rev. John Johnstone.—*Life prefixed to Sermons. Gen. Biog. Dict.*

JOHNSTONE (JOHN) nephew of the subject of the foregoing article, was born at Edinburgh in 1757. He received his education at the school and university of his native city, after which he became minister of Crossmichael, in the stewardry of Kircudbright. Two of his productions appeared in the Scots Preacher, a collection of sermons written by the most eminent divines of the last age. He was the author of various occasional discourses, printed in a separate form, some of which have been collected and reprinted since his death, and form part of a volume of his sermons, published at Edinburgh in 1825. He also edited the sermons of his uncle, the late Dr Bryce Johnstone, to which he prefixed a judicious and spirited memoir of the author. He died in 1820, in the sixty-third year of his age.—*Murray's Literary History of Galloway.*

JOHNSTONE (JOHN) an eminent comic actor, distinguished for the performance of Irish characters. He appears to have been born in Kilkenny in 1749; and at the age of twelve he was articled to an attorney at Dublin, where he continued some years, and then entered into the army, as a cadet. He left it in consequence of a quarrel with an officer, and went upon the stage, making his first appearance in Dublin as Lionel, in the opera of "Lionel and Clarissa." His reception was flattering, and his merit procured him a profitable and permanent engagement. At this time he married Miss Poitier, an actress and singer of considerable ability. In October 1783, he and his wife removed to London, and for several seasons were engaged at Covent Garden theatre. There he devoted himself to the study of Irish characters, in the representation of which he succeeded beyond most if not all his contemporaries. Johnstone was one of the performers who, in 1800, remonstrated with the proprietors of Covent Garden theatre respecting some new regulations, which they had made unfavourable to the interests of the dramatic corps; notwithstanding which his engagement was renewed. In 1803 he quitted Covent Garden for Drury Lane, on obtaining an augmentation of salary; and in the summer of that year he visited

Dublin, and by his talents attracted the warm admiration of his countrymen. He closed a theatrical career of half a century by the performance of the part of Dennis Brulgruddery, at Covent Garden theatre, in 1820; and his death took place in London, December 27, 1828.—*Theat. Dict. Month. Mag.*

JOLY (PHILIP LOUIS) a learned philologist, who died at Dijon, his native place, in 1755. He is only known on account of his writings, among which are "Remarques Critiques sur le Dictionnaire de Bayle," 1748, 2 vols, folio, "Traité de la Versification et des Ouvrages en Vers;" and papers in periodical journals.—*Biog. Univ.*

JOLY DE BEVY (LOUIS PHILIBERT JOSEPH) president à mortier of the parliament of Dijon, before the French Revolution, died in that city in 1822, at the age of eighty-three. He was distinguished as a learned lawyer and profound theologian; and he published several works against the Concordat of 1807. Among his more important productions are, "Le Parlement Outragé," 1762, 4to; and "De la Nouvelle Eglise de la France," 1816, 8vo.—*Ibid.*

JONES, LL.D. (JOHN) a unitarian divine and learned philological writer, who was a native of Carmarthenshire. He was educated at the dissenting new college, Hackney, and became tutor of an academy in South Wales. Thence he removed to Plymouth-dock, as pastor to a unitarian congregation; and he subsequently held a similar situation at Halifax in Yorkshire. At length he took up his residence in London, where he employed himself in literary pursuits and private tuition. His death took place January 10, 1827. Among his numerous publications are, "A Development of Remarkable Events calculated to restore the Christian Religion to its original Purity, and to repel the Objections of Unbelievers," 2 vols, 8vo; "Ecclesiastical Researches, or Philo and Josephus proved to be Historians and Apologists of Christ, of his Followers, and of his Gospel," 8vo; "Illustrations of the Four Gospels, founded on Circumstances peculiar to our Lord and his Evangelists," 8vo; a Greek and English Lexicon; Greek and Latin Grammars, and other works on education.—*Monthly Repository.*

JONES (STEPHEN) an industrious compiler and editor of literary works, born in London in 1763. He was educated at St Paul's school, and afterwards placed under an eminent sculptor, with whom he stayed but a short time, and was then apprenticed to a printer in Fetter-lane. At different periods of his life he was employed in various printing-offices; but his chief occupation was writing for the press. In 1791 he published an abridgement of Burke's Reflections on the French Revolution; and in 1797 he became editor of the Whitehall Evening Post, and afterwards of the General Evening Post. He was a member of the society of Freemasons, and was concerned in the Freemasons' Magazine. One of his principal undertakings was a new edition of the Biographia Dramatica, 4 vols 8vo, which was

severely animadverted on by Mr Octavius Gilchrist in the Quarterly Review, in reply to whom Mr Jones published a pamphlet entitled, "Hypercriticism Exposed." One of his works is a small Biographical Dictionary, which has passed through numerous editions. He died in December, 1827.—*Month. Mag. Edit.*

JOUBERT (FRANCIS) a French priest, was born in Montpellier in 1689, and died in 1763. He was for some time imprisoned in the Bastille, on account of his religious opinions, which were those of Jansenism. He wrote "Lettres sur l'Interprétation des Saintes Ecritures;" "Caractère essentiel aux Prophètes;" "The History of Joseph;" "Explanations of the Prophets," 8 vols, 12mo.—*Diet. Hist.*

JOURDAN (ATHANASIVS JOHN LEGER) a French lawyer, born in 1791. He applied himself when young to the study of Roman jurisprudence, history, and philosophy; and in 1812 he was admitted a doctor of law of the faculty of Paris. With a view to the improvement of the science he cultivated, he engaged in a correspondence with the most learned professors of the universities of Germany; and about 1820 he received a commission to go to England, in order to study the organization of the police, when he formed connexions with many of the most distinguished English lawyers. He died at Deal, in Kent, August 27, 1826, just as he was about to return from a subsequent visit to this country. He was one of the conductors of the legal journal, *La Thémis*, and the author of "Relation du Concours ouvert à la Faculté de Droit de Paris pour la Chaire de Droit Romain," Paris, 1819, 2 vols, 8vo; besides other works.—*Annales Biographiques*, tom. i. *Biog. Univ. Class.*

JOUVENET (JOHN) a painter, was born at Rouen in Normandy in 1644. He studied under Poussin. He was employed at Versailles, the Trianon, and the hospital of the Invalids at Paris; at the latter place he painted the twelve apostles, of colossal stature. He was afflicted by a stroke of the palsy, which took away the use of his right side, and he succeeded in painting with his left hand. He died in 1717.—*D'Argenville.*

JOYNER or LYDE (WILLIAM) a Roman Catholic writer, was born at Oxford in 1622, and became a fellow of Magdalen college, which, however, he quitted in 1644, and changed his religion. Forty-three years afterwards he was restored to his fellowship by James II, but was soon afterwards expelled. He died in 1706. His works are "Observations on the Life of Cardinal Pole;" "The Roman Empress," a comedy; "Latin and English Poems."—*Wood.*

JUBE (AUGUSTUS) baron de la Pérelle, maréchal-de-camp, was born at Leuville, near Montlhéry in France, in 1765. He was first employed in the administration of the Marine at Cherbourg, and then successively became chief of the first legion of the national guard of La Manche, inspector, and afterwards in-

spector-general of the coasts. (1794) In 1796 he was made an adjutant-general, and on the 18th Brumaire, in the year VIII, he had the command of the guard of the Directory. He afterwards became a member of the Tribunal, and occupied alternately the prefectures of La Doire and Du Gers. After the Restoration Jube was attached as historiographer to the dépôt-general of war; and he retired from active service with the rank of maréchal-de-camp and the cordons of the legion of honour and St Louis. He died in 1824. General Jube published "Histoire des Guerres des Gaulois et des Français en Italie," 1805, 7 vols, 8vo, in conjunction with general Servan; "Le Temple de la Gloire, ou les Fastes Militaires de la France, depuis le Règne de Louis XIV, jusqu'à nos jours," 1819, 2 vols, folio; and "Histoire Générale des Guerres de la France depuis Louis XIV."—*Biog. Univ. Class.*

JUNCTIN or GIUNTINO (FRANCIS) an eminent astronomer, was born at Florence in 1523. He entered the order of Carmelites, which he left and professed Protestantism, but returning to the Catholic religion he remained in it till his death, which took place at Lyons in 1590. He published "Speculum Astrologium," 2 vols, folio; "Commentaries on the Sphere of Sacrobosco," 2 vols, 8vo; "A Treatise on the Comet of 1577;" "A Work on the Reformation of the Calendar."—*Moreri.*

JUNG (JOHN HENRY) a German writer of considerable talent and eccentric character, who laid before the world an account of his own remarkable life, under the title of "Henry Stilling's Biography." He was born in 1740, and destined for the employment of a charcoal burner, but he chose rather to be a tailor. Having an ardent thirst of knowledge, he acquired some share of learning, by his own exertions, during his leisure hours. He then offered himself as a candidate for the office of master of a school, but failing in his attempt to secure it, he was obliged to return to his trade, from which, however, he was occasionally called, to act as a private teacher in families. He subsequently became a physician, and a professor; and at the time of his death he was a counsellor of state at Baden. He is said to have been a man of a most amiable and open character; and his account of his own life is supposed to be one of the most veridical works of the kind which was ever written. His piety was of a fervent, but at the same time of a visionary cast: he believed in the intercourse of departed spirits with the living, and his peculiar doctrines on this subject were adopted by many of his countrymen and contemporaries. In his biography are preserved some curious old German ballads; and besides that work, he published "Theorie der Geisterkunde," 1808, 8vo; and a "Pocket-book for the Friends of Christianity, for the year 1813."—*London Mag.*

KAPNIST (—) a Russian dramatic poet, born about 1758. He was a relation and friend of the celebrated Derjavine, and he enriched the theatre of his native country with many productions, remarkable for force of sentiment and elegance of expression. In his style he is said to have been a successful imitator of Horace. His comedy, entitled "Iabeda"—Chicane, has been regarded as one of the best plays belonging to the Russian stage. He died in 1824.—*Bioy. Univ. Class.*

KARAMSIN (NICOLAI MIKHAILOVITCH) a celebrated Russian historian, born in the government of Simbirsk in 1765. He served for some time in the imperial guard; he afterwards travelled abroad in 1789—1791, and on his return to Moscow he devoted himself entirely to literature, and especially to the study of history. He was considered by his countrymen as holding the highest rank among their public writers, when, by order of the emperor Alexander, he engaged in composing "The History of the Russian Empire," published at Petersburg, 1816, &c. 11 vols, 8vo. The emperor Nicholas, by a ukase of May 25, 1826, gave permission to Karamsin to travel abroad for the benefit of his health, and bestowed on him a pension of 50,000 rubles, with a reversion to his widow and children. He died on the 3d of June following, at the palace of Taurida. A French Translation of the Russian History has been published at Paris. He was the author of many other works, including "Letters of a Russian Traveller;" "A Collection of Novels;" "The Pantheon of Russian Authors;" "The Pantheon of Foreign Literature;" and "Researches concerning the History of Russia." He also conducted various political and literary journals, and translated the tales of Marmontel and of madame de Genlis.—*New Necrology of Germans. Bioy. Univ. Class. Revue Encyc.*

KEAN (EDMUND) a celebrated dramatic actor, especially distinguished as a tragedian. His mother was the granddaughter of Harry Carey, the reputed author of "God save the King," but though that song, both as to the words and the music, appears to have been improperly attributed to him, he certainly wrote several popular songs of superior merit, and also some burlesque dramas, which still keep possession of the stage. The son of this gentleman, George Saville Carey, was likewise a dramatic writer and a performer; and the daughter of the latter became the mother of the subject of this article. Mr Kean was also more indirectly connected with the stage through the family of his father, Aaron Kean, who, though not himself a professor of the histrionic art, was the brother of Moses Kean, who obtained some notoriety as an actor in low comedy, and still more by his talents as a mimic and ventriloquist. Edmund Kean was born in Castle-street, Leicester-square, London; but the date of his birth is somewhat

uncertain. In a biographical sketch of this celebrated performer, published by Mr F. Phippen, soon after his first appearance in the metropolis as a tragedian, in 1814, it is stated that his birth took place November 4, 1787; while he himself, we are told, always asserted that he was born on the 17th of March, (St Patrick's day,) 1790; and another authority fixes his birth to the day of the month last mentioned, but in the year 1788. He trod the stage almost as soon as he could walk alone, being employed in processions and other exhibitions of still life, for which his size and figure was adapted. When John Kemble was in the zenith of his glory at Drury Lane, the infantile actor, destined to be his future rival, was imperceptibly acquiring the rudiments of his theatrical education. A whimsical though trifling accident at this time led to his temporary dismissal from the stage. Kemble, then manager, when about to appear in the character of Macbeth, directed that in the scene where Hecate and her sister witches, summoned by Macbeth to declare his future fate, are introduced performing their infernal incantations around the magic caldron, a number of children, in grotesque habits, to represent imps from the lower regions, should dance in a circle about the weird sisters, to add to the effect of the exhibition. Among the children selected for this occasion was Kean, who, at the instant of Macbeth's entrance into the witches' cavern, made a false step, from which, wearing manacles on his legs, he could not recover himself, and falling against the boy next to him, he also was thrown against his neighbour, and the consequence was that the whole circle was laid flat on the ground; and thus what should have been not merely grave but awful, was turned to farce. The confusion thus occasioned displeased Mr Kemble, who gave orders that children should not be thus introduced again, either as devils or angels, and regarding Kean's mischance as a violation of the discipline of the stage, he discharged him. The young aspirant bore the misfortune with philosophical indifference, alleging in his own defence, that he had never before acted in tragedy. Returning to the stage, at the Haymarket theatre, he delivered messages, and performed trifling parts, with no great advantage to himself, to the company, or to the audience; and he was chiefly remarked on account of the silence and shyness with which he took his seat in the green-room. Miss Tidswell, an actress long known on the metropolitan stage, and said to have been a relation, assisted Kean in his juvenile efforts to advance in his profession; and at the age of thirteen, through letters of recommendation from that lady, he was engaged by the manager of a small theatre in Yorkshire. He played there under his mother's name of Carey, and is said to have obtained much applause in the parts of Hamlet, Lord Hast-

ings, and Cato. He also distinguished himself by his talents for recitation; and his delivery of *Satan's Address to the Sun*, from *Milton's Paradise Lost*, and the first soliloquy of *Richard III.* in *Shakspeare's* tragedy, having been highly applauded, he repeated his recitations at Windsor, where persons belonging to the royal family were present. The marks of genius which he displayed attracted the notice of Dr Drury, who sent him to Eton school, where he remained three years. He improved the opportunity thus afforded him so as to obtain a tolerable acquaintance with the Latin language, and especially with the works of Virgil and Sallust, which he studied with great pleasure; and he also devoted much of his attention to the writings of the Roman orator Cicero, as affording in abundance both precepts and examples relative to eloquence of style and the art of speaking in general. On quitting Eton he procured an engagement at the Birmingham theatre, where he played *Hamlet* and *Shylock* with some success; but it is said that he did not receive those enthusiastic tokens of approbation to which he had been accustomed when on the stage before he went to Eton. His professional skill, however, was not overlooked by those who ought to be good judges of the abilities of an actor; for the manager of the Edinburgh theatre having seen him perform at Birmingham, immediately engaged him for twenty nights, on twelve of which, successively, he played *Hamlet* at the Northern Athens, to crowded houses. At that time he was about sixteen, and he still retained the name of Carey. From Edinburgh he went to Sheerness, and acted at the theatre there, then under the management of Mr Jerrold, the father of a successful dramatist of the present day. The next place at which he appeared was Sevenoaks, where he exhibited his talents in tragedy, comedy, and pantomime; and thence he went to Tunbridge Wells, and at the theatre there he made his first appearance in the part of Lord Hastings, and his efforts excited high anticipations of future excellence. When he was at the age of about eighteen he was engaged by Mr Cherry, the manager of the Swansea and Waterford theatres. From Swansea he went with the manager to his Irish theatre. He now cultivated his talents for music; and he did not disdain to pay some attention to the art of mimicry. He was between eighteen and nineteen years of age when he went to Ireland, and he made his début at Waterford in the character of Douglas, for which he was then well qualified by his figure and general appearance. While in this situation he married the lady who is now his widow, and by whom he had one son, who survives him. After continuing a member of Mr Cherry's company during two years, he quitted it, and joined a company at Weymouth, where he played for some time with great success. From this last place he proceeded to Exeter, and in that city he became a great favourite. Having played in many country theatres, he revisited Weymouth,

where he endeavoured to increase his scanty income by becoming a teacher of the art of fencing as well as a dramatic performer. From Weymouth he went to Taunton, and at length to Dorchester, where he surprised and delighted the frequenters of the theatre by his acting in tragedy, comedy, opera, and pantomime, and in the latter his feats of activity are said to have been wonderful; and they certainly excited the wondering admiration of the spectators. This was the critical period of his life, and he was now destined to experience a most agreeable reverse of fortune. Dr Drury, to whom he had been so much indebted for the means of improving his talents, had not been unobservant of his theatrical career, and having had an opportunity of witnessing his performance at Exeter, he conceived that Kean possessed powers which could not fail to be duly appreciated in the metropolis. He therefore wrote to Mr Pascoe Grenfell, a member of the committee under whose management the affairs of Drury Lane theatre were then placed; and in consequence of Dr Drury's recommendation, Mr Arnold was despatched as the agent of the committee to Dorchester, where Kean was then acting. The delegate of the Drury committee had taste enough to appreciate fairly the abilities of the young performer, and invited Kean to breakfast with him the following morning. After some negotiation he was engaged to perform at Drury Lane theatre for three years, at a rising salary of eight, ten, and twelve guineas a week for each successive year. Kean's first appearance on the stage in pursuance of this contract has been most impressively described by a writer who must have been present on the occasion. It was on the evening of January 26, 1814; and the character he assumed was that of *Shylock*, in the *Merchant of Venice*: "The house was empty of nearly all but critics and those who came in with oranges or orders; and the listlessness of the small spiritless audience at the first night of a new *Shylock* was 'the languor which is not repose.' There came on a small man with an Italian face and fatal eye which struck all. Attention soon ripened into enthusiasm; and never perhaps did Kean play with such startling effect as on this night to the surprised few! His voice was harsh, his style new, his action abrupt and angular; but there was the decision, the inspiration of genius, in the look, the tone, the bearing; the hard unbending Jew was before us, in the full vigour of his malignity; the injuries upon him and upon his tribe saddened his eyes, but through them you could trace the dark spirit of revenge, glaring in fearful imperishable fury. That night was the starting-post on the great course on which he was destined to run his splendid race." To trace the fortunate career of this gifted performer through the long range of characters in which he shone at Drury Lane, including *Richard the Third*, *Hamlet*, *Othello*, the noblest conceptions of *Shakspeare* and other master minds, would be inconsistent with the limits to which this biographical sketch must

KEA

be confined. Mr Kean after several seasons passed at Drury Lane, while he visited other English theatres, or those of Scotland or Ireland in the summer, at length went to America; and on his return to his native country, his portrait was engraved in the costume of an Indian chieftain, and exhibited in the print-shops, to commemorate his having been fraternized or naturalized in some tribe of trans-Atlantic savages. This was at least a harmless piece of vanity; but there are other circumstances of his private life and character deserving of a far severer sentence, and more decidedly marked reprobation; but they are already known to the public, and further allusion to them here would answer no useful purpose whatever. He at length became manager of the theatre at Richmond in Surrey, where he died after a protracted illness and severe suffering, May 15, 1833. His funeral took place on the 25th of the same month, when a great number of actors and other persons connected with the theatres, as well as many other friends and admirers, attended. He was interred in the cemetery belonging to the old church at Richmond, near the grave of the poet Thomson, and of Richard Burbage, a contemporary of Shakspeare, and the original representative on the mimic scene of Richard the Third. The great misfortune of Kean was his too sudden success. He was the Massaniello of the stage, and could not bear his prosperity. From the moment his superiority was admitted he was never mentally sober. Kean's life may be deemed a study for those who like to trace the operation of excitement upon quick and lively temperaments. It is something more in a moral point of view, forming one of the finest lessons on the subject of ordinary good fellowship that was ever supplied. In his circle he was usually king of all, the paymaster of all, and reigned supreme in all sorts of Comus-like performances. The result, as all the world know, has been very melancholy. He was the dupe of the drunken fool, the low hanging-on, or flattering fool, and indeed of every sort of fool; and for the implied supremacy thus afforded him, sacrificed the most respectable connexions and society, and was willing to sacrifice them. His conduct, as respects the other sex, was equally reckless and disreputable, and his social history, altogether, illustrates a truth which has often been propounded—that the gift of happy personal assimilation, like many other gifts of a peculiar kind, while not inseparable from strong general powers of mind, is by no means a proof of their existence. On the whole, few have more tried the constancy of that admiration independent of all moral considerations, which is so frequently bestowed on those great native aptitudes which are usually termed genius than this distinguished actor, who to the last received marks of attention from many who could be guided by no other feeling. This is as it should be; something is due to positive value received, whatever may qualify or alloy our moral estimation of the medium

KIE

through which it is afforded.—*New Monthly Mag.*

KEITH (GEORGE) a native of Aberdeen, took his degree of master of arts at that university. He then turned Quaker, and went to Pennsylvania; here he became dissatisfied with Penn's sect, and endeavoured to model one of his own, but his efforts proving vain, he entered the church of England, and obtained some preferment. He wrote several works for and against the Quakers; among the latter "Reasons for renouncing that Sect," 8vo, 1700. He died about 1715.—*Burnet's Own Times.*

KERVERSAU (FRANCIS MARIE de) a French writer, who died in 1825. He was one of the principal authors of "Histoire de la Révolution de France, par deux Amis de la Liberté," Paris, 1792, &c, 20 vols, 8vo.—*Biog. Univ. Class.*

KESSEL (JOHN van) a portrait painter after the manner of Vandyck, was born at Antwerp in 1626, and died in 1690. He particularly excelled in his representation of fruit, flowers, and insects. His son Ferdinand was honoured with the patronage of John Sobiesky.—*Houbraken.*

KETEL (CORNELIUS) a Dutch artist, came to England in the reign of Elizabeth, whose likeness he took. He returned to Holland, and in an eccentric fit he commenced painting with the tops of his fingers, laying entirely aside the use of pencils. He then tried to paint historical pictures with his toes. He died in 1600.—*Granger.*

KHERASKOFF (—) a Russian poet, who was born in 1733. His principal production is entitled "Rossiada"—The Russiad, an epic poem, founded on a very interesting portion of the history of his native country, the destruction of Casan, the seat of Tatar dominion, by John Basilowitz II, in 1552, and the consequent annihilation of the power of those formidable oppressors of Russia, the Tatars. The plan of this work is well conceived, the machinery introduced is appropriate and ably managed, there is no deficiency of incident or interest, and many of the scenes and episodes are forcibly delineated; but the author is not always successful in the execution of his design, his style being unequal, occasionally tame, and often degenerating into bombast. In spite of its faults, it may however be characterised as a powerful and striking, though not a masterly performance. Kheraskoff displayed great industry and versatility of talent, for besides the Russiad, and a poem in sixteen cantos, entitled "Vladimir," he was the author of several tragedies, odes, and other compositions. He died September 27, 1807.—*Depré de St Maur Anthologie Russe. For. Rev.*

KIESEWETTER (CHRISTOPHER GOTTFRIED) an eminent musician and performer on the violin, born at Anspach in Germany in 1777. He came to England in 1821, and first performed at the Philharmonic concert, where he established his reputation as a concerto and solo player. He was the first who

introduced into this country the compositions of Mayseder; and in the season of 1824 he performed at the spiritual and other concerts in London. He died in great Portland-street, London, September 28, 1827.—*Gent. Mag.*

KIRCH (GODFREY) an astronomer, was born at Guben, in Lower Lusatia, in 1640. He was educated at Leipsic, where he distinguished himself by his almanacs; and when the Academy of Sciences was established at Berlin, he was chosen a member, and appointed astronomer in ordinary. He died in 1710.—His wife, **MARY MARGARET WINKELMAN**, born near Leipsic in 1670, surpassed her husband in her astronomical talents, and after his death maintained her family by the composition of almanacs. In 1711 she published "Preparations for observing the Conjunctions of Saturn, Jupiter, &c." In 1716 she was appointed astronomer to the academy at Berlin. She died in 1720. Several of her observations were published in the memoirs of the French Academy of Sciences.—Their son, **CHRISTIAN FREDERIC**, also published several astronomical works. He died in 1740.—*Hutton.*

KIRKPATRICK (JAMES) a major-general in the British service, who passed a great part of his life in Hindostan, where he was employed by the East India company. He became a skilful Orientalist, and published a "Biography of Persian Poets;" a "Description of the Kingdom of Nepal," London, 1811, 4to; and a "Selection of the Letters of the Sultan Tippoo Saib," 1811, 4to. His death took place in 1812.—*Biog. Univ. Class.*

KITCHENER (WILLIAM) a physician and miscellaneous writer, who died in London in February 1827. Among his works are "The Cook's Oracle;" "Practical Observations on Telescopes;" a collection of songs with music; and "The Traveller's Oracle." Dr Kitchener excited much attention from some rather intellectual eccentricity, and a happy vein of humour enlivened by all the arts of good fellowship, and what is called the *savoir vivre*. He was greatly liked in his circle.—*Ann. Biog.*

KITE (CHARLES) an eminent surgeon, who died at Gravesend in Kent about 1811. Besides some articles in the London Medical Journal, he was the author of a treatise "On the Recovery of Persons apparently Dead from Drowning, &c.," 1788, 8vo, for which he obtained a prize offered by the Royal Humane Society.—*Biog. Univ. Class.*

KLOSE (F. J.) an ingenious music composer and professor, who was a native of London, where his father followed the same profession. Having been instructed in the elements of music by his father, he studied composition and the piano-forte under the famous Francesco Tomich, and other musicians. He became a performer in most of the orchestras of London, including that of the King's Theatre, and the concert of Ancient Music; all which, except the last, he resigned, to devote himself exclusively to teaching and composition. As an instructor on the piano-forte he was peculiarly skilful, and as

a composer, his works are distinguished for facility and elegance. Besides instrumental pieces, including ballets and other music for the King's theatre, he has set to music with great taste and feeling some pathetic and sentimental ballads of Cowper, lord Byron, and lady Caroline Lamb. He died in London, March 8, 1830.—*Biog. Dict. of Mus. Month. Mag.*

KNIAJENIN (JAMES BORISSOVITCH) counsellor of the court, and member of the Russian Academy, was born in 1742. He was educated under the poet Sumorokof, whose daughter he married, and he devoted himself to the study of the dramatic literature of France and Italy. He died in 1791, leaving a considerable number of poems and plays, in which he has occasionally imitated the finest passages of Corneille, Racine, and Voltaire. The style of this writer, who was at one time very popular in Russia, is cold and sometimes inflated. A complete collection of his works was published at Petersburg in 1802, 5 vols, 8vo, containing six tragedies, four comedies, five operas, and one melo-drama, besides odes, fables, &c.—*Biog. Univ. Class.*

KNIGHT (GOWIN) an English philosopher, was educated at Magdalen college, Oxford, where in 1742 he took his degree of bachelor of physic. He was a fellow of the Royal Society, and practised in London; but falling into distress, he applied to Dr Fothergill, who generously extricated him from his difficulties. He published "An Attempt to demonstrate that all the Phenomena in Nature may be explained by Attraction and Repulsion," 4to, 1748.

KNIGHT (THOMAS) an actor and dramatic writer, who was a native of Dorsetshire. His father was a person of respectability, who gave him a liberal education, with a view to the profession of a barrister; but having received lessons in oratory from Macklin, his inclination led him to the stage, and he made his first appearance as an actor at York, where he performed five seasons with considerable success. He afterwards acted at Bath, whence in 1796 he removed to Covent Garden; and by his correct representation of rustic characters and flippant coxcombs, he became a favourite with the public. In 1797 he displayed his talents as a writer in his farce of "The Honest Thieves," altered from the old comedy of The Committee. He afterwards produced a musical entertainment, called "The Turnpike Gate," 1799; "Tag in Tribulation," an interlude; and "What would the Man be at?" a prelude, 1801. He was one of the succeeding performers who, with Mr Holman, opposed the managers in 1800. His death took place in 1820.—*London Mag. Biog. Univ. Class.*

KNIGHT (EDWARD) a distinguished comedian, born at Birmingham in 1774. He was intended for the profession of an artist, but on the death of the person to whom he was articled he went on the stage. After having performed in North Wales and in Staffordshire, he became a member of Tate Wilkinson's company at York. In that situation

KOL

he remained seven years, and then procured an engagement at Drury Lane, where, and at the Lyceum, he continued to be a very popular actor, till illness obliged him to retire from his professional duties. He died at his house in Great Queen-street, Lincoln's-inn-fields, London, February 21, 1826. His powers as a comic actor were very considerable; there was an odd quickness, and a certain droll play of the muscles of his face that prepared the audience for the jest that was to follow. His *Sim*, in *Wild Oats*, has been esteemed the most chaste and natural of stage exhibitions.—*Gent. Mag. Ann. Biog.*

KNOLLIS or **KNOWLES** (sir FRANCIS) vice chamberlain and treasurer to queen Elizabeth, was born at Grays, in Oxfordshire. Having distinguished himself by his zeal for the Reformation, in the reign of Edward VI, on the death of that monarch he left England. On the accession of Elizabeth he returned, and rose high in her favour, being created a Knight of the Garter. He died in 1596. Sir Francis wrote "A Treatise against the Papal Usurpation;" and a "General Survey of the Isle of Wight."—*Wood.*

KNORR a **ROSENROTH** (CHRISTIAN) a learned German, was born in 1636, and became chancellor to the count palatine of Sulzbach. He rendered himself celebrated by a curious work, entitled "Kabbala denudata seu Doctrina Hebræorum transcendentalis et metaphysica atque theologica," 3 vols, 4to. He died about 1700.—*Moreri.*

KNOX (HENRY) a major-general in the army of the United States of America, who died at Thomastown in 1806. He first commanded an independent company at Boston; and when that place was besieged by the British troops, Knox directed the artillery employed for its defence in quality of brigadier-general. In 1785 he was called to the office of secretary at war, and he retained that post under Washington till 1794, when he resigned, and withdrew entirely from the management of public affairs.—*Biog. Univ. Class.*

KOIALOWICZ (ADALBERT) a Polish historian, who was born in 1609. He composed, in elegant Latin, a "History of Lithuania," which was translated into German by the celebrated A. L. von Schloezer, who says that "Koialowicz is, beyond dispute, one of the best historians of the seventeenth century; as respects his manner of writing, his selection of materials, the wisdom of his views, and his critical judgment."—*Rev. Encycl.*

KOLLMANN (AUGUSTUS FREDERICK CHARLES) an eminent musician and musical composer, who was organist of the German chapel at St James's Palace, London. He was born 1756, at Angelbostel, a village near Hanover, where his father was organist and schoolmaster. He learnt Latin while young, and at the age of fourteen was admitted into the Gymnasium at Hanover, where he was a pupil two years. He then passed five years, partly with his parents and partly at Hanover, where he learnt music of J. C. Boettner, organist to the principal church there. In

KRE

1779 he was received into the academy for intended schoolmasters, in the electorate of Hanover, where he learnt a systematical method of teaching, which he afterwards found extremely useful when he engaged in musical tuition. In 1781 he went to Lune, where he was appointed organist and schoolmaster to a Protestant establishment, or convent for noble ladies, near Luneberg, where he remained about a year, when he removed to London, in consequence of his having obtained the situation already mentioned at St James's. Though he devoted himself industriously to the duties of his office, as organist and schoolmaster at the royal chapel, he found time to prepare for publication several musical treatises and compositions, including an "Essay on Musical Harmony," 1796, folio; a "New Theory of Musical Harmony," 1806, second edition, 1812; an "Essay on Practical Composition," 1799, second edition, 1812; a "Practical Guide to Thorough Bass," 1807, folio; and "Remarks on the new Musical System of Logier;" besides which he produced Fugues, Concertos, and other pieces of instrumental music. His death took place on Easter Sunday, 1829.—*Biog. Dict. of Music.*

KOSTROW (ERMIILUS IVANOVITSCH) the son of a peasant in the environs of Viatka, in Russia, who studied at a seminary in that city, and in 1771 entered into the university of Moscow, where, seven years after, he took his bachelor's degree. He obtained an employment in the provincial administration, and died in 1796. Kostrow obtained celebrity in his native country by an elegant Russian translation of the poems of Ossian, and an imperfect version of Homer's Iliad. His original poetry was published at Petersburg in 1802.—*Revue Encycl.*

KOTTER (CHRISTOPHER) a religious enthusiast, was born at Sprottow in Silesia in 1585. He took the side of the Protestants, and fancying himself prophetically inspired, he published his visions for their encouragement. Becoming very troublesome, in 1627 he was banished the imperial territories. He then went into Saxony, where he died in 1647. His prophecies were published at Amsterdam in 1657, by Comenius, with the title of "Lux in Tenebris."—*Moreri.*

KREUTZER (RODOLPH) a celebrated violin player and musical composer, who was born at Versailles, in 1767. He was the son of a musician in the king of France's band; and at a very early age he evinced considerable talent for music. He received instructions on the violin from Anthony Stamitz, and when only thirteen, he played in public at the Concert Spirituel, with great success, a concerto of his master's composition. At the age of nineteen, he had composed two complete operas, which were performed before the whole court. He subsequently travelled in Germany, Holland, and Italy, and established his fame as one of the first violinists in Europe. He was at length appointed first violin player to the private chapel of Buona-

K R E

parte, head of the orchestra at the grand opera at Paris, and professor of instrumental music at the conservatory. It may be considered as a remarkable proof of his talents that Buonaparte has been heard to declare that his time was too precious to be spent in listening to instrumental music *except when Kreutzer was playing a concerto on the violin*. He died at Geneva, February 6, 1831, at the age of sixty-three. His works, besides numerous pieces for the violin, consist of the music for the operas of Joan of Arc, 1790; Lodoiska, 1791; Paul and Virginia, 1791; Charlotte and Werter, 1792; Harmodius and Aristogiton, 1794;

K R O

The death of Abel, and some others.—*Biog. Dict. of Music. Cab. Ann. Reg.*

KRONEGK (JOHN FREDERIC baron von) an eminent German dramatist and lyric poet, who was gentleman of the bed-chamber to the margrave of Anspach. He was the author of a tragedy which displayed the promise of great future excellence, but this piece has the defect of being written in Alexandrine verse, and it is therefore now never exhibited on the stage. He died at an early age in 1758. His writings were published at Leipsic in 1770, 2 vols, 8vo.—*Zopf.*

L A C

LABEY (JOHN BAPTIST) a French mathematician, who was a native of the department of Calvados. He became professor of mathematics at the military school at Paris, afterwards at the central schools of the Seine, and then at the polytechnic school and the Napoleon Lyceum. He died in 1825. He published "*Traité de Statique*," Paris, 1812, 8vo; and Euler's Letters to a German Princess; and his Introduction à l'Analyse Infinitésimale, 1799, 2 vols, 4to.—*Biog. Univ. Class.*

LABORIE (J.B.P.) a French physician and medical writer, born at Montpellier in 1797, and died in 1823, professor of physiology in that city. He published "Dissertation sur le Tétanos Traumatique," Montpellier, 1820, 8vo; "Pronostics d'Hippocrate, commentés par A. Piquer, &c. trad. de l'Espanol," Paris, 1822, 8vo; and "Eclaircissemens Analytiques sur la Doctrine Physiologique de Barthez."—*Ibid.*

LACAZE (Louis de) a physician, born in 1703, in the country of Bearn, and died at Paris in 1765, physician in ordinary to Louis XV. Among his works are "Specimen Novi Medicinæ Conspectus," 8vo; "Institutiones Medicæ ex Novo Medicinæ Conspectu," 12mo; and "Idée de l'Homme Physique et Morale," 1755, 8vo.—*Ibid.*

LACOMBE (JAMES) a miscellaneous writer, was born at Paris in 1724. His works are, "Abrégé Chronologique de l'Histoire Ancienne," 8vo; "De l'Histoire du Nord;" "De l'Histoire d'Espagne et de Portugal;" "Le Salon;" Révolutions de l'Empire de la Russe;" "Histoire de Christina, Reine de Suède;" "Le Spectacle des Beaux Arts;" "Dictionnaire portatif des Beaux Arts."—His brother, HONORE LACOMBE DE PREZEL, was born at Paris in 1725, and published three dictionaries: "Dictionnaire de Jurisprudence," 3 vols, 8vo; "Dictionnaire de Citoyen," 2 vols, 8vo; "Dictionnaire de Portraits et d'Anecdotes des Hommes Célèbres," 2 vols.—Another author of this name, FRANCIS LACOMBE, compiled

L A C

a dictionary of old French, 1765, 8vo. He died in 1793.—*Dict. Hist.*

LACRETELLE, aîné (PIERRE LOUIS) a French writer, born at Metz in 1751. He appeared with distinction at the bar, and became connected with the most celebrated among his contemporaries. He was a counsellor of parliament, one of the editors of the Grand Répertoire of Jurisprudence, and of the *Mercur de France*; and in 1767 he was appointed member of a committee charged with the reformation of the penal code. When the Revolution took place, Lacretelle embraced its principles with moderation, and sat in the Legislative Assembly, where he defended the constitution of 1790. He was obliged to retire from public duty after August 10, 1792; and he did not issue from his retreat till after the fall of Robespierre. Elected one of the jurors of the high national court, he entered into the legislative body in 1801, but voting against the plans of the new government, he obtained no official situation. He succeeded Laharpe as a member of the French Academy; and during the imperial government he devoted his time to the cultivation of literature. In 1817 he became associate-editor of the *Minerve*, and inserted in that journal some articles advocating independent principles. When the law passed relative to the censure of the press, Lacretelle endeavoured to evade it by turning bookseller, and publishing a continuation in the form of distinct pamphlets. For this he was summoned before the correctional police, and condemned to a month's imprisonment; but on account of his age and respectability the royal clemency was extended towards him. He was engaged in preparing a new edition of his works when he died in 1824. Among his writings are, "Eloquence Judiciaire et Philosophie Législative;" "Roman Théâtral;" "Portraits et Tableaux;" and he left unpublished "Les Etudes sur la Révolution," and "Mes Soirées à Malesherbes." He was a contributor to the *Encyclopédie Méthodique*.—*Biog. Novv. des Contemp. Biog. Univ. Class.*

LAENNEC (R. T. H.) physician to the ducress of Berry, lecturer and royal professor of medicine at the college of France, member of the Royal Academy of Paris, was a native of Quimper in Brittany. He studied at Nantes, under his uncle, who was chief physician to the hospitals in that city. Having become a student at Paris in 1799, he gained in 1802 two grand prizes for medical and surgical dissertations offered by the Institute; and he soon after raised himself to eminence as one of the most skilful anatomists of his time. He is principally known on account of an invention which he published in a treatise, entitled "*De l'Auscultation Médicale, ou Traité du Diagnostic des Maladies des Poux-mons et du Cœur*," Paris, 1819, 2 vols, 8vo. In this work he develops the experiments he made by means of an instrument styled a stethoscope, in which the vibrations of a rod are supposed to afford pathological indications of the state of the cavities of the body and their contents, in health and disease. Laennec died at Kerlouarnec, in the department of Finistère, August 13, 1826.—*Revue Encycl. Biog. Univ. Class.*

LAFFON DE LADEBAT (ANDREW DANIEL), a French statesman and political writer, who was descended from a respectable family, and was born at Bordeaux, in 1746. He completed his education at the university of Franequer, in Holland; and on his return to Bordeaux he was admitted into partnership with his father, who was then at the head of a great commercial establishment. In 1775, on his marriage he retired to an estate near his native place, and devoted his leisure to the study of political economy, agriculture, and the fine arts. He published a work "On the Freedom of the Commerce of India." He was one of the founders of the Academy of Painting, at Bordeaux; and he became a member of the Academy of Arts and Sciences in that city, and also of the Agricultural Society of Paris. In 1791 he was returned as a member of the legislative assembly, in which he presided over the committee of finance during a whole session. On the 10th of August, 1792, when Louis XVI and his family took refuge in the hall of the assembly, M. Laffon was president of that body, and in the horrid massacre in September following, he saved the life of the abbé Sicard. He was subsequently himself exposed to great danger, but having survived the proscriptions of the reign of terror, he was chosen, in September 1795, a member of the Council of Ancients, for the department of the Seine. He spoke, on many occasions, on financial affairs; and showed himself, as in the legislative assembly, the friend of moderation. The party which he opposed having gained the ascendancy in the state, in consequence of the events of the memorable 18th of Fructidor, (September 4, 1797,) he was condemned to deportation, and was conveyed to Cayenne. One of the first acts of the consular government was the recall of the exiles. Several of the departments, after his return, gave their suffrages in favour of Laffon, as a

member of the senate, but Buonaparte refused to confirm his election. After his long services in the financial department, his administration of the public revenue was attacked by his enemies; but after a severe and protracted investigation, he was, in 1813, most honourably acquitted. In 1815 he visited England, and collected much information concerning its finances, commerce, and public institutions. After his return, he presented to Louis XVIII an interesting work on the finances of France. He did not subsequently engage in politics, but he took an active part in the management of several religious and charitable institutions. The latter part of his life was embittered by a succession of private and domestic calamities; and at length he expired, after a short illness, in 1829.—*Month. Mag.*

LAFONTAINE (AUGUSTUS HENRY JULIUS) a celebrated German romance writer, who was born at Brunswick, February 6, 1756. He was descended from a family of French protestant refugees, and was the son of a professor of the art of painting. Being destined for the church, he was sent to study theology in the university of Helmstadt; but feeling no disposition to enter into holy orders, he in 1786 accepted the office of tutor to the children of the Prussian general Theden. Through the influence of that officer he was appointed in 1789 almoner to a regiment, and as such he accompanied his patron in the incursion of the Prussians into Champagne in 1792. After the conclusion of the treaty of Basle he returned to the university of Halle, where he afterwards principally resided. Among the numerous romantic productions of his pen may be mentioned "Blanche and Minna, or the Manners of the Burgers;" "Moral Systems, or Ludwig of Eisach;" "Raphael, or the Life of Peace;" "Charles and Emma, or the Infant Friends;" "Emilia in the World;" "Walther, or the Child of the Battle-field;" "Henrietta Bellman;" "The Baron de Flemming, or the Rage for Titles;" "Family Pictures, or the Journal of Charles Engelmann;" "The Country Clergyman, or New Family Pictures;" and "Clara du Plessis and Clairaut, or the History of two Lovers." Most of these works have been translated into French by Mad. de Montolieu. In the "Family Pictures" are found portraits attractive from their originality, a mild and tolerant philosophy, and a spirit of criticism seldom bitter and often gay and lively. Besides these compositions he published the Agamemnon and Choephore of Æschylus, with Notes, Halle, 1821, 2 vols. Lafontaine also wrote dramatic pieces in the German language entitled "Die Tochter der Natur;" and "Die Prüfung der Treue." His death took place in 1831.—*Biog. Nouv. des Contemp. Encycl. Amer.*

LAING (ALEXANDER GORDON) a celebrated but unfortunate African traveller. He was born at Edinburgh, December 27, 1794; and his father kept an academy in that city, where he received his early education. In his fifteenth year he became an assistant to Mr

Bruce, an eminent teacher at Newcastle, with a view to his adopting the profession of tuition. Inclination however induced him to relinquish the prospect of succeeding his father, and in 1810 he obtained an ensigncy in the prince of Wales's Edinburgh volunteers. The following year he went to Barbadoes, and after serving in the West Indies and America, and having been made a lieutenant, he returned to Scotland, in ill health. In 1819 he was sent to Sierra Leone, as lieutenant and adjutant; and early in 1822 he was despatched by the governor, Sir Charles M'Carthy, on an embassy to Gambia and the Mandingo country, after his return from which he was ordered to join his regiment on the Gold Coast. An account of his expedition was published in London, and the work was translated into French by MM. Eyriès and de Larenauvière, under the title of "*Voyage dans le Timanni, le Kouranko, et le Soulimana*," Paris, 1826, 8vo, with a prefatory essay on the progress of discovery in Africa. After the death of Sir C. M'Carthy, Mr Laing was sent to England; and after visiting his friends in Scotland, he returned to London in 1824. The following year, having been promoted to the rank of major, he was employed by government in an expedition to explore the course of the river Niger. He reached Timbuctoo in August 1826; and on his return towards the coast, he was murdered by the African barbarians.—*New Month. Mag. Ann. Reg. Rev. Encycl.*

LALLY TOLLENDAL (Marquis de) the son of count Lally, the unfortunate victim of popular prejudices. (See DIOR.) He was born at Paris in 1751, and was educated at the college of Harcourt, where he was distinguished for the number of prizes which he gained during the period of his studies. The expenses of his education were defrayed by his cousin the countess Dillon, and by Louis XV, who thus endeavoured to make some atonement for the misfortunes which he incurred through the fate of his father. At the age of fifteen he wrote a Latin poem on the story of John Calas, who had been sacrificed to the fury of a mob, a subject to which he had been manifestly directed by filial feeling; and when he had attained a more mature age he warmly exerted himself to retrieve from obloquy the memory of his father, in which his endeavours were ultimately crowned with success. The judgments passed by the parliament on his father were reversed by four decrees of the council, and in 1783 he regained possession of his paternal estates. Previously to the Revolution, he was captain in the regiment of cuirassiers; and in 1789 he was nominated deputy from the nobility of Paris to the States General. He soon became one of the most popular members of the Constituent Assembly, he gave his support to the declaration of the Rights of Man proposed by Lafayette, and subsequently suggested as an amendment that all citizens should be eligible to public employments, which was adopted by acclamation. His notions of liberty, however, were not quite so extensive as those of many of his

coadjutors, as he proposed the British constitution as a model of government; and perceiving that principles prevailed repugnant to his sense of justice he resigned his seat in the assembly, and retired into Switzerland with his friend M. Mounier. He published a work entitled "*Quintus Capitolinus*," in which he retraced the operations of the National Assembly, pointed out the faults of the constitution, and condemned the suppression of the higher orders of the state. Having returned to France in 1792, he was arrested and sent to the Abbaye, but having fortunately escaped amidst the massacres which took place in the prisons in September, he subsequently effected his retreat to England, where he obtained a pension from the government. On the trial of Louis XVI he wrote to the Convention to offer himself as the official advocate of that prince, and he composed a speech in his defence which he afterwards published. In 1796 he produced a "*Defence of the Emigrants*," in which the question of emigration was treated with considerable address. When Buonaparte became consul, he returned to France, where he resided, in literary retirement, till the restoration of the Bourbons, in 1814. He accompanied Louis XVIII to Ghent as one of the members of his privy council, and he is supposed to have written the manifesto of the king to the French nation. In the new arrangement of the chamber of deputies, M. de Lally had a seat as a marquis. He died in 1830. Besides the works already mentioned, he wrote an "*Essay on the Life of the Earl of Strafford, the Minister of Charles I.*" and a tragedy on the fall of that nobleman.—*Dict. des Hommes Marquans du 18me S. Month. Mag.*

LAMARQUE (—) a distinguished French military officer and statesman, who was born at St Sever, in 1772. He entered into the army as a private, and soon became a captain of grenadiers, in the famous corps commanded by Latour D'Auvergne, first grenadier of France. At an early age he was made an adjutant-general, and had obtained high reputation. He served in the wars of the republic, and in the campaigns of Austerlitz, the Tyrol, Naples, and Wagram. Having rendered himself famous throughout Italy by the capture of Caprea, he was selected to proceed to the reduction of Calabria; and immediately afterwards he was sent to Spain, where he was engaged in the most arduous services. In the battles of Alta Julia, Tarragona, Ripouil, Col Sacro, Baguelas, and Salad he added greatly to his reputation. He did not return to France till 1814; and he was not employed under the government after the first restoration. But on the return of Buonaparte from Elba, he gave Lamarque the command of Paris, and then that of a division on the Belgian frontier, and in the month of May nominated him general in chief of the army of La Vendée. On the second restoration he was placed on the list of the proscribed of the 24th of July, 1815. After his re-entrance into France in 1818, he published a work on the "*Necessity of a Per-*

manent Army," exhibiting the traces of deep reflection and extensive experience. He employed his pen, as he had before his sword, in the service of his country; and of late years he furnished a number of articles for the patriotic journals, chiefly relating to foreign politics. In 1826 he was called by the voice of his fellow-citizens to the Chamber of Deputies. After the revolution of 1830 he became one of the most prominent members of that which has been termed the movement party, and as such he often opposed the measures of government under the ministry of Perrier. He died at Paris, June, 1, 1832.—*Le Constitutionnel*.

LAMB (Lady CAROLINE) a lady distinguished for her literary taste and talents, who was the only daughter of Frederick the third earl of Besborough. She was married June 3, 1805, to the hon. William Lamb, now lord Melbourne, by whom she had a daughter who died in infancy, and a son George Augustus Frederic, the godson of his late majesty. She was a woman of a strong and decided character, and several years since she made herself conspicuous by canvassing personally the electors of Westminster, when her brother-in-law, the hon. George Lamb, was a candidate for the representation of that city in Parliament. She wrote poetry with ease and elegance, and some of her poetical pieces were published in the newspapers and periodical journals; but the most considerable productions of her pen are the novels of "Glenarvon;" "Graham Hamilton;" and "Ada Reis." She enjoyed the friendship of some celebrated literary men, as Rogers, Moore, and lord Byron, the last mentioned of whom addressed to her ladyship some beautiful lines a short time before he quitted this country. She died at Whitehall, London, January 26, 1828, aged forty-two.—*Gent. Mag.*

LAMBERT (CHARLES FRANCIS) a French ecclesiastic, but he afterwards quitted this profession, and coming to Paris he wrote for the booksellers. His works are, "Memoirs of a Woman of Quality," 3 vols; "History of all Nations," 14 vols; "The New Telemachus," in 3 vols. He died in 1765.—*Dict. Hist.*

LAMOTTE (WILLIAM) a celebrated surgeon and accoucheur, was born at Valogne in Normandy, and studied at Paris. His works are, "Dissertation sur la Génération, et sur la Superfétation," 1718; "Traité complète de Chirurgie;" "Traité des Accouchements Naturels, Non-naturels, et Contre-nature," 8vo, 1715.—*Eloy. Haller.*

LAMOTTE FOUQUE (CAROLINE baroness de) an ingenious and popular German novelist or romance writer, who was the wife of the author of "Undine," a romance which has been translated into English, and other pieces of a similar kind. Among the productions of her pen may be mentioned "Rodrich," 1810, 2 vols; "Die Frau des Falkensteins," 1810; "Briefe über die Griechische Mythologie für Frauen"—Letters on the Grecian Mythology, for Females, 1812; "Magie der Natur," 1812; "Feodora," 1815, 3 vols; "Das Heldenmädchen aus der Vendée," 1816,

2 vols; "Die früheste Geschichte der Welt"—The earliest History of the World, 1818, 3 vols; and "Die Herzoginn von Montmorency," 1822, 3 vols. This lady died at her paternal estate, near Rathenow, July 31, 1831.—*Orig.*

LANDON (C. P.) a painter and biographical writer, who died in 1826. He was a correspondent of the fourth class of the Institute, keeper of paintings at the Museum, and member of many learned societies. His publications are very numerous, including "Annales du Musée et de l'Ecole Moderne des Beaux Arts," (1re collect. 1801—10, 17 vols, 8vo; 2de collect. 1810—17, 12 vols, 8vo); to which may be added, "Paysages et Tableaux de Genre," 1805, 4 vols, 8vo; "Vies et Œuvres des Peintres les plus célèbres," 1803—17, 22 vols, 4to; and "Galerie Historique des Hommes les plus célèbres de tous les Siècles et de toutes les Nations," 1805—9, 12 vols, 12mo. He also executed some paintings of considerable merit.—*Biog. Univ. Class.*

LANDUS (BASSIANUS) a native of Placentia, studied physic at Padua, where he took his doctor's degree in 1554. He was assassinated at Placentia by a soldier, in 1562. He wrote "Iatralogia," 4to; and "De Humana Historia, vel de singularum Hominis Partium Cognitione," 8vo.—*Moreri.*

LANE (Sir RICHARD) an English judge, was a native of Northamptonshire, and studied at the Middle Temple. He was made chief baron in 1648 by Charles I, who also knighted him. He was one of the commissioners at the treaty of Uxbridge, and on the death of Edward lord Lyttleton he succeeded him in the charge of the great seal. His Reports in the Exchequer were printed in 1657, folio. He died at Jersey in 1651.—*Wood.*

LANG (JOHN MICHAEL) a Protestant divine, was born at Ezelwangen, in the duchy of Sultzbach, in 1664, and was professor of theology at Altorf. He died in 1731. He is the author of "Dissertationes Botanico-Theologicæ," 4to; "De Fabulis Mohammedicis," 4to; "Philologia Barbaro-Græca," 4to.—*Moreri.*

LANGHAM (SIMON de) a native of Langham in Rutlandshire, was originally a monk, and then abbot of St Peter's, Westminster. In 1360 he was made lord high treasurer, and the following year he was chosen bishop of London, but he preferred the see of Ely, which was offered him at the same time. In 1364 he was made chancellor, and two years afterwards he was promoted to the see of Canterbury, where he distinguished himself by his violence against Wickliff. In 1368 he was made a cardinal, which so offended Edward III that he seized the temporalities of his see. Langham repaired to the papal court, where he was fully recompensed, and employed until his death in 1376. His body was brought to England and buried in Westminster abbey, to which he had been a liberal benefactor.—*Wharton's Anglia Sacra.*

LANGRISH (BROWNE) an English physician, and a member of the Royal Society. He

distinguished himself as a clever physiologist. He died in London in 1759. His works are, "A Treatise on the Small-Pox," 8vo, 1758; "Modern Theory of Physic," 8vo, 1738; "Croonian Lectures on Muscular Motion," 8vo, 1747; "A New Essay on Muscular Motion," 8vo, 1733; "Physical Experiments on Brutes," 8vo, 1745.—*Rees's Cyclop.*

LANJUNAIS (count JOHN DENIS) a French statesman and man of letters, born at Rennes in 1753. He was educated for the bar, and became professor of law at his native place. In 1779 he was chosen one of the counsellors of the states of Brittany, and in 1789 he was a deputy from the Tiers Etat to the States General. He took an active part in the deliberations of the Legislative Assembly, and after the session was over he resumed his chair at Rennes. In September 1792 he entered the National Convention, in which he acted as the friend of rational liberty; and on the trial of the king he voted for his reclusion, and banishment on the restoration of peace. He was afterwards proscribed by the jacobins, and having remained in concealment during the reign of terror, he returned to his seat in the Convention in 1795. On the creation of the two legislative councils, he became a member of that of the Ancients; and he was admitted into the senate on the double presentation of the legislative body, March 22, 1800. Lanjuinais opposed the establishment of the consulship for life; notwithstanding which he was made a count of the empire, and a commandant of the legion of honour. He voted in the senate for the abdication of Napoleon; and on the restoration of the king he was comprised in the first organization of the chamber of peers, where he continued after the second restoration. He died January 13, 1827, leaving the character of an enlightened patriot and independent man. Among his numerous works, chiefly relating to politics, is a treatise entitled "Constitutions de la Nation Française, précédées d'un Essai Historique et Politique sur la Charte," Paris, 1819, 2 vols, 8vo.—*Revue Encycl. Biog. Univ. Class.*

LAPLACE (marquis PIERRE SIMON) a celebrated French mathematician and astronomer, born at Beaumont-en-Auge in 1749. He became professor of mathematics in the military school of his native place, whence he removed to Paris, where he was patronised by the president Saron, and other persons of influence. In 1784 he succeeded Bezout as examiner of the royal corps of artillery; and in 1796 he was president of a deputation which presented to the Council of Five Hundred an account of the labours of the Institute from the time of its creation. After the revolution of the 13th Brumaire, 1799, he was made minister of the interior, but was removed in about six weeks to make room for Lucien Buonaparte. He was then admitted into the senate, of which he became president in 1803; and the following year he made a report to that body concerning the necessity of abandoning the republican calendar and restoring the Gregorian. In 1814 Laplace, who had voted for

the deposition of Napoleon, was comprised in the first organization of the chamber of peers, and received from the king the title of marquis. When the French Academy, in the session of January 1827, resolved to petition the king against the project of the law for repressing the transgressions of the press, the marquis Laplace, who occupied the chair as director, opposed the resolution of his brethren, and quitted his seat. He died shortly after, March 6, 1827. The principal works of this geometer are, "Théorie du Mouvement et de la Figure Elliptique des Planètes," 1784, 4to; "Théorie des Attraction des Sphéroïdes et de la Figure des Planètes," 1785, 4to; "Exposition du Système du Monde," 1796, 2 vols, 8vo, 1824, 5me édit.; "Traité de Mécanique Céleste," 1799, &c. 5 vols, 4to, in which his profound application of the analytical processes produced most remarkable conclusions; "Théorie Analytique des Probabilités," 1812, 4to; "Essai Philosophique sur les Probabilités," 1814, 4to. Laplace was grand cordon of the legion of honour and of the order of reunion, count of the empire, member of the French Academy, the Academy of Sciences, the bureau of longitude, and many other scientific associations.—*Revue Encycl. Biog. Univ. Class.*

LARIVE (—) a celebrated French tragedian, who was born at Rochelle, in 1749. He made his first appearance on the stage at Lyons; and in 1771 he went to Paris, and exhibited his talents at the theatre Français, under the patronage of mademoiselle Clairon. The warm eulogy which that distinguished actress bestowed on him had the effect of lowering Larive in the estimation of the public; but at length his fine person, and his powers of declamation extorted general admiration, and for many years he stood on a level with Le Kain. He quitted the theatre at an earlier age than is usual with those performers who have obtained so high a degree of popular favour. By some his retirement was attributed to the severe criticisms of the journalist Geoffroi; but it may with more probability be ascribed to a feeling of alarm at the prospect of being supplanted in his sovereignty as a tragic hero by Talma. He afterwards repaired to Naples, on the invitation of Joseph Buonaparte, by whom he was treated with much liberality. He died at Montignon, in 1827, at the age of seventy-eight. M. Larive published a drama entitled "Pyramus and Thisbe;" "Reflections on the Histrionic Art;" "A Course of Declamation;" and other works.—*Biog. Nouv. des Contemp. Ann. Reg.*

LASSALA (MANUEL) a Spanish jesuit, was born in 1729, at Valentia, and died at Bologna in 1798. His works are "An Account of the Castilian Poets;" "An Essay on general History," 3 vols, 4to; a Hebrew Translation of Lokman's Fables; a Latin Poem on the Inundation of the Rhine; Tragedies, in Italian.—*Dict. Hist.*

LASSELS, or LASCELLES (RICHARD) a Roman Catholic clergyman, was a native of Yorkshire, and was educated at Oxford. He

became a secular priest at Douay, and took the situation of travelling tutor to some young noblemen. He died at Montpellier in 1668. He wrote an entertaining description of Italy, in 2 vols, 8vo.—HENRY LASSELS, who assisted Charles II in his escape after the battle of Worcester, was of the same family.—*Wood.*

LAVATER (Louis) a Swiss divine, was born in the canton of Zurich in 1527. He was one of the canons of his native place, and had the offer of the chair of theology, which he refused. He died in 1536. He wrote "La Vie de Henri Bullinger," whose daughter he married; "Vita Conradi Pellitani;" "De Ritibus et Institutis Ecclesiæ Tigurinae;" "Cometarum Catalogus;" "Commentarii in Lib. Josue;" "A Treatise on Spectres," which has been translated into English, &c.—*Melch. Adam.*

LAVERAUX (JOHN CHARLES THIBAUT de) a philological writer, born at Troyes, in France, in 1749. He became professor of literature at Berlin, whence he removed to Strasburgh, where he edited a political journal. In August 1792 he went to Paris, and became chief conductor of the "Journal de la Montagne," which he at last relinquished to devote himself to the belles lettres. He died at Paris, March 15, 1827. Among many useful works which he published, are "Nouveau Dictionnaire de la Langue Française," 1820, 2 vols, 4to; and "Dictionnaire Raisonné des Difficultés Grammaticales et Littéraires de la Langue Française," 1822, 2 vols, 8vo.—*Revue Encycl. Biog. Univ. Class.*

LAWRENCE (Sir THOMAS) a celebrated portrait painter, was born in 1769, at Bristol, where his father kept an inn, and from which place he removed to Devizes, in Wiltshire. It does not appear how he first acquired a taste and talent for drawing, but he began to attempt the art at so early an age, that when not more than six years old his ability in sketching likenesses had attracted great notice. At the age of nine, it is said, without the instruction of any master, he was capable of copying historical pictures very cleverly, and that he had succeeded also in compositions of his own, especially in one of Peter denying Christ. His father, having failed as an innkeeper at Devizes, relinquished business and retired to Bath, where the son for a time studied under Mr Hoare, an eminent painter in crayons. There he executed crayon likenesses, at half a guinea and a guinea each, by which means he is said to have supported his father and family. In 1783 young Lawrence obtained from the Society for the Encouragement of Arts, the prize of a silver palette, and five guineas, for a copy in crayons of the Transfiguration of Raffaele. At the age of fifteen he went to Salisbury, where he was warmly patronised by Dr Hancock, at whose recommendation, he soon after removed to London, and took up his residence in Greek-street, Soho. For some time after his arrival in London he painted heads at three guineas each; and in 1787 he exhibited seven pieces at Somerset House, among which was a portrait of Mrs

APP. BIOG. DICT.

Esten, the actress, in the character of Belvidera. In 1788 he had six portraits in the exhibition; in 1789, among thirteen of his pictures, were portraits of the duke of York, and three ladies of quality; and in 1790 he exhibited portraits of the queen, the princess Amelia, and a whole length of Miss Farren, afterwards countess of Derby. Among the earliest and most liberal of his patrons was the late lord De Tabley, of whose lady he executed a beautiful portrait, in the character of Hope, which has been regarded as one of his finest productions. In 1792 he exhibited a portrait of George the Third, at which period he was principal painter in ordinary to his majesty; and his fame and fortune at this time became established. Few artists ever painted so many portraits of his sovereign as Lawrence produced of George IV, with whose personal friendship he was honoured, and who gave him the order of knighthood. After the peace of 1814 he painted the portraits of generals Blücher, Platoff, and Wellington, the statesmen Metternich, and Castlereagh; subsequently those of Louis XVIII, and several members of the royal family at Paris, the allied sovereigns, and the then ministers at Vienna, the pope, cardinal Gonsalvi, and others at Rome; and more recently that of Charles X of France, by whom he was invested with the order of the legion of honour. On the death of Mr Benjamin West, in 1820, Sir Thomas Lawrence, who had when very young been admitted into the Royal Academy, was elected president of that institution. He was then at Rome, engaged in painting the portrait of the pope, but he speedily returned to England. Though from circumstances almost exclusively confined to portrait painting, Lawrence's genius would have led him to cultivate with success the higher branches of the art: this appears from the noble style of his portraits in character, among which may be particularized his picture of John Kemble, in Coriolanus; his Lucifer, his Hamlet, and many others. In portraits he displayed the high merit of presenting the most exquisite likenesses, while at the same time he heightened the beauty and characteristic expression of his originals. Lawrence obtained high prices for his productions: 600l. for a whole length, a moiety of which was required to be paid on the first sitting. His professional income has been estimated at from 10,000l. to 15,000l. a year, notwithstanding which he is said to have died poor, and even in embarrassed circumstances, his involvements having arisen chiefly from his liberal and profuse expenditure in the purchase of scarce and valuable works of art. The collection which he left of drawings, etchings, &c. were valued at 50,000l. His death took place January 7th, 1830, in consequence of an internal inflammation, occasioned by ossification of the vessels of the heart. Sir Thomas Lawrence was considered so extremely handsome in early youth, that Mr Hoare is reported to have said, that if he had to choose a head for a picture of Christ, he would fix upon Lawrence as his model: and

LE C

he retained, in a great degree, these personal advantages through life. His remains were interred in St Paul's cathedral; the funeral, which was public, being attended by the members of the Royal Academy, and the Societies of Painters in Water Colours, and British Artists, besides many persons of rank and eminence.—*Williams's Life and Correspondence of Sir Thomas Lawrence, Knt. Ann. Biog. Month. Mag.*

LEAKE (Sir JOHN) the son of Mr Richard Leake, a naval officer, was born at Rotherhithe in 1656. At the Revolution he was intrusted with the command of a seventy-gun ship; he was present at the battle off La Hogue, and in 1701 was made first captain of the *Britannia*, under the earl of Pembroke, lord high admiral of England. The next year he commanded a squadron sent against Newfoundland, and on his return he was made an admiral. In 1703 he was knighted, and distinguished himself at the capture of Gibraltar, the garrison of which he afterwards relieved when nearly surrendered. He repeated this service at Barcelona. He then took Carthage and Minorca, and being appointed commander-in-chief of the fleet, he distinguished himself greatly in the Mediterranean. He died loaded with honours, August 1, 1720.—*Biog. Brit.*

LE CENE (CHARLES) a Protestant clergyman, was born at Caen in 1646. He came to England on the revocation of the edict of Nantes, and died here in 1703. He was the author of a French version of the Scriptures, printed by his son at Amsterdam, in 2 vols, folio, which caused much disappointment to those who had previously seen his prospectus, entitled "Projet d'une nouvelle Version Française de la Bible." This prospectus, without being acknowledged, was translated into English by Henry Ross, and went through two editions.—*Dict. Hist.*

LECLERC (VICTOR EMANUEL) a French general, born at Pontoise in 1772. He entered into the army in 1791 as a volunteer, and passing with the rank of sub-lieutenant into a regiment of cavalry, he became aide-de-camp to general Lapoype. At the siege of Toulon, in 1793, he was made a captain; and on the surrender of that place, promoted to be chief of a battalion in reward of his services. After having been employed in the army of the Alps, and at Marseilles, he was removed in 1796 to the army of Italy, under the command of Buonaparte; and he subsequently occupied the post of sub-chief of the staff. Promoted to the rank of general of a brigade in 1797, and married the same year to one of the sisters of Buonaparte, he became chief of the staff of general Berthier, who commanded the army of Italy after the treaty of Campo Formio, and who being succeeded by general Brune, Leclerc retained his station. In 1799, Buonaparte, having become the head of the government, made him general of a division, and gave him the command of the army of the Rhine. He held other employments previously to his being appointed chief of the expedition

LEG

intended for the conquest of St Domingo. He sailed from Brest in December 1801, and arrived with his forces at cape François, in February 1802; but being seized with the yellow fever a few months afterwards, he died at his head-quarters, November 1, 1802.—*Biog. Nouv. des Contemp. Biog. Univ. Class.*

LEGAY (LOUIS PIERRE PRUDENT) a French writer, born at Paris in 1744. Before the Revolution he was employed in the vic-tualling office, and was afterwards attached to the ministry of ecclesiastical affairs. He was a member of several French literary societies, and perpetual secretary to the Society of Emulation at Liege. His death took place at Paris, January 3, 1826. His works, amounting in number to thirty-two, consist of elementary treatises and romances; and M. Barbier attributes to Legay a work entitled "*Mes Souvenirs*," 1785, 8vo, reprinted in 1788, 2 vols.—*Biog. Univ. Class.*

LEGEN-DRE (ADRIEN MARIE) professor of mathematics at the military school at Paris, member of the French Academy of Sciences, and a knight of the legion of honour, whose scientific researches entitle him to be ranked among the first mathematicians of the present age. In 1787 some doubts having arisen relative to the respective positions of the observatories of Paris and Greenwich, Legendre, in conjunction with Cassini and Mechain, was charged by the French government with the execution of the necessary processes for ascertaining the extent of a degree of the meridian between Dunkirk and Boulogne, while corresponding operations were carried on in England under the direction of commissioners from the Royal Society of London. The new and more exact methods of observation, which were employed on this occasion, on both sides of the English channel, enabled philosophers to obtain more accurate estimates of the relative situations of the two great national observatories than before; and thus the object of these investigations was fully attained. An account of the labours of the French commissioners was published in 1790, under the title of "*Exposé des Opérations faites en France en 1787, et Description d'un nouvel instrument propre à donner la mesure des angles à la précision d'une seconde.*" In 1794, M. Legendre published "*Mémoire sur les Transcendentes Elliptiques*;" and "*Elémens de Géométrie.*" This last-mentioned work, which is of the highest authority, had passed through eleven editions in 1817; and it has been translated into English, and published in the United States of North America. He distinguished himself by very important and profound researches concerning the attraction of elliptic spheroids; and he was the first who demonstrated that the ellipse is the only figure in which the equilibrium of a homogeneous fluid mass can be preserved under the influence of rotatory motion, and that all its component molecules would be mutually attracted in the inverse ratio of the squares of their distances. This inquiry, which he commenced in 1782, was followed by another, not less important,

on the relation of the spheroids to each other. In 1794, he was employed, with M. Prony, in the construction of trigonometrical tables for the decimal division of the circle. The men of science who cooperated in this important work were arranged in three classes, according to the three kinds of operations which the formation of the tables required. M. Legendre presided over the class to which the more abstruse operations of mathematical analysis were intrusted; and he contrived most elegant formulæ for determining the successive differences of sines. In 1795 he was a member of the temporary agency of weights and measures; and he continued to exercise the functions of the agency till it was connected with the ministry of the interior. On the formation of the institute he became a member of that body; and under the imperial government he was, in 1808, nominated a counsellor for life of the university of Paris. After the reestablishment of the royal government, in February 1815, he was made an honorary member of the council of public instruction; and in 1816, conjointly with M. Poisson, examiner of candidates for the polytechnic school. Besides the works which have been mentioned he was the author of "Nouvelle Théorie des Parallèles," 1803, 8vo; "Nouvelles Méthodes pour la Détermination des Orbites des Comètes," 1805, 8vo; "Essai sur la Théorie des Nombres," 1798; "Supplément à l'Essai sur la Théorie des Nombres," 1806; and "Exercices de Calcul Intégral," 1807, 4to; together with valuable contributions to the Memoirs of the Academy of Sciences. In 1824, Legendre, at the age of seventy-two, was deprived of his pension of 3000 francs, because he refused to give his vote to the ministerial candidates for admission into the academy. He died in 1832.—*Biog. des Contemp. Encycl. Amer.*

LEMAN, FSA. (THOMAS) an episcopal clergyman and distinguished antiquary, who was educated at Emanuel college, Cambridge. He devoted his talents to the investigation of British and Roman antiquities remaining in this country, and particularly to inquiries respecting ancient roads, &c. He was chosen a fellow of the Antiquarian Society in 1788. It does not appear that he published any distinct work, but among his contributions to the works of others may be mentioned an account of Roman roads in Britton's Beauties of Wiltshire; an essay "On Roman Roads and Stations," in Nichols's Leicestershire; a learned and ingenious memoir concerning "The Primæval Inhabitants of Hertfordshire, and the Roads and Earthworks which formerly existed in it, whether of British or Roman Origin," in Clutterbuck's Hertfordshire; and maps and observations published in Sir R. C. Hoare's Itinerary of Giraldus Cambrensis, and his Ancient Wiltshire. Mr Leman died at Bath, where he had long resided, in 1827, aged seventy-six.—*New Month. Mag. Ann. Biog.*

LEMONTÉY (PETER EDWARD) a member of the French Institute, and of the Academy of Lyons, where he was born in 1762.

He adopted the profession of an advocate, and after having been attorney of the commune of Lyons, he was chosen a deputy to the first legislative assembly, in which he distinguished himself by his moderation and the wisdom of his views, as well as by his legal knowledge. Returning to his native place, he took arms in its defence when besieged by the troops of the Convention, and he was afterwards obliged to flee into Switzerland. In 1795 he was made administrator of his district, and was also employed in various missions. After having consecrated several years to the cultivation of literature, Lemontéy was, in 1804, nominated chief of the commission for the censure of pieces for the theatre, which delicate office he filled with great ability. In 1819 he succeeded the abbé Morellet as a member of the French Academy or Institute, and he died June 27, 1826. Among his works are "Palma, ou le Voyage en Grèce," an opera; "Raison, Folie, chacun son Mot, petit Cours de Morale à la Portée des Vieux Enfants," 1801, 8vo, reprinted in 1816, 2 vols, 8vo; "Thibault, ou la Naissance d'un Comte de Champagne," 1811, 12mo; "Essai sur l'Etablissement Monarchique de Louis XIV.," 1818, 8vo; "Eloge Historique de Vicq d'Azyr," 1825, 4to. He also left in MS. "Histoire Critique de la France depuis la Mort de Louis XIV."—*Biog. Univ. Class. Annales Biograph.*

LEMOT (FRANCIS FREDERIC) a French statuary, who was a knight of the legion of honour, and of the order of St Michael. He was born at Lyons in 1773, and died at Paris, May 8, 1827. He studied the elements of architecture at the academy of Besançon, and going to Paris about 1786, he became a pupil of Dejoux, a sculptor. At the age of seventeen he obtained a prize for a bas-relief, representing "The Judgment of Solomon;" and he was then sent to Rome, where he remained two years. Returning to Paris to solicit assistance from the government for the French students in Italy, he was drawn as a military conscript, and being sent to the army of the Rhine, he served for some time in the artillery under general Pichegru. In 1795 he was ordered to Paris, to assist in the execution of a statue of Henry IV, to be placed on the Pont Neuf. Among the numerous works which he subsequently produced, may be particularized the bas relief of the tribune of the chamber of deputies; a statue of Lycurgus; that of Leonidas, placed in the Hall of Deliberations of the Chamber of Peers; that of Cicero, in the old hall of the tribunate; the colossal bust of Jean Bart, in the arsenal at Dunkirk; a figure of Hebe; a statue of Murat; the grand front of the colonnade of the Louvre; and equestrian statues, in bronze, of Henry IV at Paris, and Louis XIV at Lyons. Lemot also published "Voyage Pittoresque dans le Bocage de la Vendée, ou Vues de Clisson et de ses Environs, dessinées par C. Thiénon, avec une Notice sur le Château et la Ville de Clisson," Paris, 1817, 4to.—*Biog. Univ. Class.*

LENG (JOHN) a learned prelate, was born at Norwich in 1665. He was educated at St Paul's school and at Catherine-hall, Cambridge. In 1708 he obtained the rectory of Beddington in Surrey, and in 1723 was made bishop of Norwich. He died of the small-pox in 1727. His works are "A Course of Sermons at Boyle's Lecture;" an edition of Terence, 4to; a volume of "Sermons;" two of the Comedies of Aristophanes.—*Gen. Biog. Diet.*

LEON (FRAY LUIS de) a Spanish ecclesiastic distinguished as a lyric poet. He was born in 1527, and died in 1591. His ode entitled "La Profecía del Tago"—The Prophecy of the Tagus, a splendid and powerful composition, has been translated into English by Mr Wiffen, and published at the end of his translation of the poems of Garcilaso de la Vega. The subject of this piece is the fatal passion of the Gothic King Roderic, and the irruption of the Moors into Spain, on which Southey has founded his epic, entitled "Don Roderic." The odes of Fray L. de Leon on the Ascension and on Night, are in force, elevation, and grave beauty of sentiment and expression little inferior to the prophecy. This learned, devout, and highly talented writer, during the reign of the bigot Philip II, was exposed to a tedious, judicial process and imprisonment, on suspicion of heterodoxy.—*Mauvy Espagne Poétique. For. Rev.*

LESBONAX, a philosopher of Mitylene, in the first century of the Christian era. A treatise ascribed to Lesboux, "De Figuris Grammaticis," was printed at Leyden in 1739; and there are two Greek orations bearing his name, printed by Aldus in 1513.—*Moreri.*

LESCAILLE (JAMES) a printer and poet, was born at Geneva in 1610, and settled at Amsterdam, where his press became distinguished for the beauty of its productions. He died in 1677.—His daughter Catharine obtained the name of the Dutch Sappho. She died in 1711, and her poems were published in 1728—*Ibid.*

LESLIE (Sir JOHN) a celebrated mathematician and natural philosopher, who was born in Fifeshire, N.B. in April 1766, and was destined by his parents to follow the humble, though respectable occupations, connected with a small farm and mill. But before he had reached his twelfth year, he had attracted considerable notice by his fondness for calculation and geometrical exercises; and he became known to Professor John Robinson, of Edinburgh, and through him to Professors Playfair and Dugald Stewart. After some previous education, his parents were induced, in consequence of strong recommendation, and of obtaining for him the patronage of the earl of Kinnoul, to let him enter as a student at the university of St Andrew's. After some time passed there, he removed to that of Edinburgh. Whilst a student of the latter university, he was introduced to Dr Adam Smith, who engaged him to assist the studies of his nephew, Mr Douglas, afterwards lord Reston. Disliking the ecclesiastical profes-

sion, for which he had been designed by his parents, after finishing his studies, he proceeded to London, with the intention of supporting himself by writing for the press. His earliest employment in the capital, as a retainer of literature, was derived from Dr William Thomson, the author of the Life of Philip III of Spain, and by him he was engaged to write or compile notes for a Bible with a commentary. But Mr Leslie's first undertaking of any importance was a translation of Buffon's "Natural History of Birds," which appeared in 1793, 9 vols, 8vo. The profits of this publication formed the basis of that pecuniary independence which he subsequently attained. Some time afterwards he proceeded to the United States of America, as a tutor to a member of the distinguished transatlantic family of the Randolphs; and after his return, he engaged with the late Mr Thomas Wedgwood, to accompany him to the continent, various parts of which he visited with that accomplished individual, whose early death he ever lamented, as a loss to science and to his native country. At what precise period Mr Leslie entered on that grand field of inquiry, in which he so conspicuously distinguished himself by his masterly experiments and striking discoveries, concerning the nature of radiant heat, and the connexion between light and heat, cannot be exactly ascertained; but the invention of his differential thermometer (one of the most admirable and delicate instruments that inductive genius ever contrived to assist experimental research, and which rewarded its author by its most important aid in the performance of his finest experiments) must have taken place at least as early as the year 1800, when it was described in a periodical journal. In 1804 appeared his celebrated "Essay on the Nature and Propagation of Heat;" which work was honoured in the following year by the unanimous adjudication to its author, by the council of the Royal Society, of the Romford medals, appropriated to the reward of discoveries in that province, whose nature and limits he had so much illustrated and extended. It was in that year (1805) that he was elected to the mathematical chair in the university of Edinburgh; and the Scottish ecclesiastical courts were disturbed and contaminated by an unwarrantable attempt to annul that election, but the invidious proceedings happily failed of producing its intended effect. In 1810, through the assistance of another of his ingenious contrivances, his hygrometer, he succeeded in making the discovery of that singularly beautiful process of artificial freezing or consolidation of fluids, which enabled him to congeal mercury, and convert water into ice by evaporation. Mr Leslie exchanged the professorship of mathematics for that of natural philosophy in 1819, on the death of Professor Playfair. He had previously published his "Elements of Geometry," and an "Account of the Experiment and Instruments depending on the Relation of Air to Heat and Moisture." Of his "Elements of Natural

Philosophy," afterwards compiled for the use of his class, only one volume has been published. Besides the works now mentioned, he was the author of some admirable articles in "The Edinburgh Review," and several very valuable treatises on different branches of physics, in the supplement to the "Encyclopædia Britannica." His last, and certainly one of his best and most interesting compositions, was a "Discourse on the History of Mathematical and Physical Science during the Eighteenth Century," prefixed to the seventh edition of that national encyclopædia. He received the honour of knighthood in 1832, through the suggestion of the present lord chancellor. The last illness of this distinguished philosopher is said to have originated from a slight cause, the effect of which was aggravated by his inattention and habitual contempt of medical assistance. A neglected cold, and exposure to wet, in superintending some improvements at his country seat, brought on erysipelas in one of his legs, and the progress of disease was so rapid, that though he was out in his grounds on the last day of October, 1832, his death took place on the 3rd of November following, at his residence at Coates, near Largo, in Fifeshire, which was the place of his nativity. 'Sir John Leslie displayed a high degree of inventive genius, strength of intellect, and extensive knowledge, which his active curiosity, his various reading, and his happy memory had enabled him to attain. Some few of his contemporaries in the same walks of science may have excelled him in profundity of understanding, in philosophical caution, and in logical accuracy; but it may be questioned if any surpassed him in that creative faculty which leads to important discoveries, or in that subtility and reach of discernment which seizes the finest and least obvious relations among the objects of science, elicits the hidden secrets of nature, and ministers to new combinations of her powers. His character, however, was not without its defects. He strangely undervalued some branches of philosophical inquiry of high importance in the cycle of human knowledge; and his credulity, to say the least of it, was as conspicuous as his tendency to scepticism in science. Hence he was betrayed into some absurdities by pursuing remote or fancied analogies between principles possessing no common points of comparison; as when he finds a similitude between circulating decimals and the lengthened cycles of the seasons. In all his writings, except perhaps his last considerable production, the "History of Mathematical and Physical Science," there is a constant effort to display "thoughts that breathe, and words that burn," and a partiality for abstract, figurative, and novel modes of expression, which has exposed him to the just censure of impartial critics. But though his more airy speculations may be consigned to neglect, his exquisite instruments, and his original and beautiful experimental combinations, will ever attest the fertility of his genius, and lead to further discoveries in the vast field

of knowledge. His reading extended to every branch of information, not excepting the most obscure, which books contain. He was a lover too, and that in no ordinary degree, of what is commonly called anecdote. Though he did not shine in mixed society, and was, in the latter part of his life, unfitted, by a considerable degree of deafness, for enjoying it, yet his conversation, when seated with a friend or two, was highly entertaining. It displayed no wit, little repartee, and no fine turns of any kind, but it had a strongly original and racy cast, and was replete with striking remark and curious information. His faults were far more than compensated by his many good qualities; by his constant equanimity, his cheerfulness, his simplicity of character almost infantile, his straightforwardness, his perfect freedom from affectation, and, above all, his unconquerable good nature. He was indeed one of the most peaceable of human beings; and if, as has been thought, he generally had a steady eye in his worldly course, to his own interest, it cannot be denied that he was, notwithstanding, a warm and good friend, and a relation on whose affectionate assistance a firm reliance could ever be placed. In private life no man was ever more thoroughly sincere and honourable. There was not a shadow of hypocrisy or assumption in his character: he said at all times exactly what he thought, and never dreamed of disguising or modifying any opinion. Hence he was supposed by some, who only knew him imperfectly, to have foibles from which he was quite as free as most other men, the only thing which he lacked being the art to conceal or varnish defects. It is a circumstance highly creditable to his character as a man of science that he formed the finest and most complete set of philosophical apparatus in the kingdom, for that department of the university over which he presided.—*New Month. Mag. Ann. Biog.*

LETTICE (JOHN) a divine, and poetical writer, who was born at Rushden, in Northamptonshire, in 1737. His father was a clergyman, and he was related to Dr William Cleaver, bishop of St Asaph, and Dr Euseby Cleaver, archbishop of Dublin. He received his early education at Oakham Grammar School, and in 1756 he was admitted a member of Sidney Sussex College, Cambridge. In consequence of the death of his father he became possessed of a small estate at Kimbolton, which enabled him to prosecute his academical studies with advantage, and having distinguished himself by his talents and industry he was chosen a fellow of his college. He was subsequently appointed to the office of public tutor, and was also constituted a select preacher by the university. He took his first degree in 1761; and in 1764 he obtained the Seatonian prize for a poem on the "Conversion of St Paul;" and he translated into blank verse the Latin poem of Mr Hawkins Browne on the "Immortality of the Soul," which he subsequently published with a valuable commentary. In 1768 he

quitted the retirement of his college, to accompany Sir Robert Gunning, bart, as chaplain and secretary to the British embassy at Copenhagen. He afterwards spent several years as a private preceptor to young persons of distinction, and, among others, to the present duchess of Hamilton, (Miss Beckford,) and he visited several parts of the continent. "The Antiquities of Herculaneum," he published jointly with his friend Professor Martyr, in 1773; and in 1792 he produced a "Tour through various Parts of Scotland," in a series of letters. He was presented to the living of Peasemarsch, in Sussex, in the patronage of Sidney College, in 1785; and he was also a prebendary of Chichester cathedral. His death took place at Peasemarsch, October 18, 1832. Besides the works already mentioned, he published "Fables for the Fireside," 1812, 2 vols, 8vo; "Strictures on Elocution;" "Miscellaneous Pieces on Sacred Subjects in Prose and Verse;" Sermons and Tracts; and he translated from the Danish, Baron Holberg's Parallel Lives of Famous Ladies, after the manner of Plutarch.—*Biog. Dict. of Living Authors. Ann. Biog.*

LEVIS (duke de) a French nobleman who distinguished himself by his literary productions. He was the son of the maréchal de Levis, descended from one of the most ancient families in France. At the beginning of the French Revolution he was chosen as a deputy to the States General, by the nobility of Dijon, but neither there, nor in the Constituent Assembly, did he act a conspicuous part. Though a friend to reformation of the state, he was by no means disposed to cooperate in the overthrow of the monarchy; and after the occurrences of the 10th of August, 1792, he became an emigrant, and entered into the royalist army; and subsequently he engaged in the expedition to Quiberon Bay, in which he was wounded. He then resided in England till the establishment of the consular government under Buonaparte, when he returned to his native country. He did not however accept of any office under that ruler, but passed his time in retirement, devoting himself to literary pursuits. In 1806 he published "Maxims and Reflections on different Subjects," and among his subsequent productions may be mentioned "The Travels of Kanghi, or new Chinese Letters," 1812, 2 vols; "Recollections and Portraits," 1813; "England at the Beginning of the Nineteenth Century," 1815; and "Moral Considerations on the Finances," 1816. On the restoration of Louis XVIII, he was comprised among those who were first promoted to the peerage; and in 1816 he was admitted a member of the French academy. His death took place at Paris, in March 1830.—*Month. Mag.*

LEVRAULT (FRANCIS XAVIER) a French writer, born in 1763. He became rector of the academy of Strasburgh, and member of the municipal councils of that city, where he established a library. He published an extensive work, entitled "Dictionnaire des Sciences Naturelles," Paris and Strasburgh, 1816, &c.

His death took place in 1821.—*Revue Encycl. Annuaire Nécrolog. Biog. Univ. Class.*

LEVRIER (—) lieutenant-general of the bailiwick of Meulen, before the Revolution, died at Amiens in 1823. He was a native of Geneva, and became a member of the academy of Orleans, and a correspondent of the third class of the Institute. Besides articles in periodical works, he was the author of "Chronologie Historique des Comtes de Genève jusqu'à l'Etablissement de la Réformation en 1535," 1787, 2 vols, 8vo.—*Biog. Univ. Class.*

LINGLEBACH (JOHN) a painter, was born at Frankfort-on-the-Maine in 1625, and died in 1687. He is distinguished for the admirable manner in which he painted ruins, sea views, naval fights, fairs, mountebanks, &c.—*D'Argenville.*

LOLLI, or LOLLY (ANTONIO) a celebrated preformer on the violin, who was born at Bergamo, in Italy, in 1728. From 1762 to 1773 he was concert master to the duke of Wirtemberg, and he afterwards went to Russia, where he excited the admiration and experienced the liberality of the empress Catharine II. In 1785 he visited England and afterwards Spain, whence he proceeded to Paris, and in 1788 he returned to Italy, and while there he assumed the title of concert master to the empress of Russia. In 1791 he went to Berlin, with his son, a child only eight years old, who attracted admiration by his correct performance on the violoncello; and he afterwards performed at Copenhagen. In 1794 both the father and son were at Vienna, where the former styled himself first concert master to the king of Naples; only the son, however, performed in public. He died at Naples in 1802, after a lingering illness. Lolli, for a considerable period, displayed extraordinary ability as a violinist; he possessed a wonderful command over that instrument; but in the latter part of his life not a trace was left of the wonderful skill which had established his fame. Some collections of his solos have been printed at Berlin and Vienna; and editions of his "Ecole pour le Violin" were published at Paris and Offenbach.—*Biog. Dict. of Mus.*

LOW (GEORGE) an English naturalist, born in 1746, and died in 1795. He was a minister of the Scottish kirk in the isle of Pomona, one of the Orkades. (Orkney Islands.) He was the author of "Fauna Orcadensis," London, 1813, 4to, edited by Dr Leach; besides other works.—*Biog. Univ. Class.*

LOWITZ (GEORGE MAURICE) a German astronomer, born in 1722, near Nuremberg. He made a great progress in the study of physics and mathematics without a master, and in 1755 he became professor of practical mathematics at Gottingen. Being dissatisfied at not obtaining the direction of the Observatory after the death of Dopplemayor, he resigned his chair in 1762. He then went to St Petersburg, where he was admitted a member of the Academy of Sciences, appointed to observe the passage of Venus over the sun's

disc, and charged with the taking levels for the construction of a canal to join the rivers Don and Volga. He was thus employed when he fell under the power of the rebel Pugatscheff, by whom he was cruelly put to death, August 24, 1774. He published "An Account of new Terrestrial Globes," Nuremberg, 1746, folio; "An Explanation of two Astronomical Charts," 1748, 4to, and other works, besides papers in the memoirs of the academies of Gottingen and Petersburg.—**TOBIAS LOWITZ**, son of the preceding, born at Gottingen, became professor of chemistry at Petersburg, and a member of the Imperial Academy. He travelled on foot in Italy, France, and England, and collected a great number of observations on natural history, which he published in Crel's Chemical Annals, and in the Memoirs of the Academy of Petersburg. He died in 1804.—*Biog. Univ.*

LUCCHESINI (JOHN VINCENT) an Italian ecclesiastic and nobleman, was born at Lucca in 1660. He was canon of St Peter's at Rome, and secretary to the pope. He wrote a valuable history of his own times, in 3 vols, 4to, and translated Demosthenes into Latin. He died at Rome in 1744.—*Dict. Hist.*

LUCE DE LANCIVAL (JOHN CHARLES JULIAN) a French poet, born in Picardy in 1764. He became professor of rhetoric at the college of Navarre at Paris, at the age of twenty; and after having passed the stormy period of the Revolution in literary retirement, on the re-organization of the university he was appointed professor of the belles lettres at one of the new lycées at Paris. He died in 1810. He wrote six tragedies, one of which, entitled "Hector," was very successful. Among his other works are "Achille à Scyros," an imitation of Statius; and "Poèmes sur le Globe." His works were published in 1826, 2 vols, 8vo.—*Biog. Univ. Class.*

LUISINO (FRANCIS) an Italian writer, secretary to the duke of Parma, was born at Udina in 1523, and died in 1568. He wrote "A Latin Commentary on Horace's Art of Poetry;" a treatise "De Compescendis Animi Affectibus;" "Parergon."—**LOUIS LUISINO**, a physician of Udina, published "The Aphorisms of Hippocrates," in Latin hexameters, with other works.—*Moreri.*

LOMAZZO (JOHN PAUL) an Italian painter of the sixteenth century, who, becoming blind at an early age, turned author, and wrote "A Treatise on Painting," 4to, and "Idea del Tempio della Pittura," 4to.—*Dict. Hist.*

LOMBARD (JOHN LOUIS) an engineer, was born in Strasburgh in 1723. He was originally intended for the law, but turning his attention to military mathematics, he became professor of artillery at Mentz, whence he removed to take the conduct of the school at Auxerre. He died in 1794. His works are "Aide-mémoire à l'Usage des Officiers d'Artillerie de France," 2 vols, "Tables du Tir des Canons et des Obusiers;" "Instructions sur la Manœuvre et le Tir du Canon de Ba-

taille;" "Traité du Mouvement des Projectiles;" "Translation of Robin's Principles of Gunnery."—*Dict. Hist.*

LORT (MICHAEL) a native of Pembroke-shire, was born in 1725. He became fellow of Trinity college, Cambridge, where he took his degrees of divinity, and was appointed Greek professor. This chair he resigned on being preferred to the rectory of St Matthew in Friday-street. In 1789 he obtained that of Fulham. He died in 1790. He wrote some sermons and poems, and a short comment on the Lord's Prayer.—*Gen. Biog. Dict.*

LOUVET (PETER) an advocate, was a native of Reinville, near Beauvais. He wrote "Nomenclatura et Chronologia Rerum Ecclesiasticarum Diocesis Bellovacensis;" "Histoire de Beauvais;" "Hist. des Antiquités du Diocèse de Beauvais;" "Remarques sur la Noblesse Beauvoisine et de plusieurs Familles de France." He died in 1646.—Another writer of the same name and place taught rhetoric and geography at Montpellier, and wrote some works on the antiquities of Languedoc and Provence, likewise "Le Mercure Hollandois," 10 vols, 12mo.—*Moreri.*

LOVAT (SIMON FRAZER), commonly called lord, a Scottish statesman, born in 1657. He was educated in France, among the jesuits, and returning to his native country, he entered into the army, and in 1692 he was a captain in the regiment of Tullibardine. After having committed some acts of violence in taking possession of his hereditary estate, he fled to France, and gained the confidence of the old pretender, which he made use of on his return to Scotland, in order to ruin his personal enemies. He again went to France, where he was imprisoned in the Bastille, and was liberated only on condition of taking religious orders, in pursuance of which engagement he is said to have become a jesuit. In 1715 he a second time betrayed the pretender, and he was rewarded by the government of George I with the title of Lovat, and a pension. Notwithstanding these favours, he engaged in the rebellion in 1745, for which he was tried, condemned, and executed in April 1747. A volume of autobiographical memoirs, by this restless and unprincipled politician, was published in 1797, 8vo.—*Monthly Review. Biog. Univ. Class.*

LVOFF (PAUL YUREVICH) a Russian historian, who died June 11, 1825, in the fifty-sixth year of his age. He was the author of several historical narratives and tales, among which that entitled "Msislaff I, Grand Duke of Novogorod," is regarded as his masterpiece. This piece so strongly excited the admiration of the celebrated poet Derschawin, that he formed the design of giving it a poetical dress, but ill-health prevented him from executing his purpose. Lvoff's most considerable production in point of extent is his "Russian Temple of Fame," comprising a series of historical portraits, from the time of Gostomisl to the accession of the house of Romanoff. All his compositions of this class display an enthusiastic spirit of pa-

LYN

triotism, and great elegance of style.—*For. Rev.*

LYNAR (ROCH FRADERIC, count de) born in Lower Lusatia, in 1708, was successively ambassador of the king of Denmark in Sweden, judge of the supreme tribunal of Gottorp, grand-bailli of Steinburgh, chancellor of the regency of Holstein at Gluckstadt, ambassador at Petersburg, and governor of the duchy of Oldenburg. He assisted at the convention of Closterseven, and retired from the

LYN

Danish service to his estate at Lubbenau, in his native country, where he died in 1781. He was the author of "Travels in Upper Lusatia, Westphalia, &c.;" "Political Reflections and Negotiations;" and a "Paraphrase on the Epistles and Gospels."—HENRY CASIMIR GOTTLÖB, count de LYNAR, son of the preceding, wrote the life of his father, and other works, for the use of the Pietists, or Moravians. He died in 1796, aged forty-eight.—*Biog. Univ. Class.*

MAC

MAC CORMICK (CHARLES) an ingenious writer, who devoted himself to literature as a profession. He was a native of Ireland, and at the age of eighteen he visited London, and afterwards Paris; and he then returned to England, and entered as a student at the Middle Temple. The death of his father, just as he was about to be called to the bar, reducing his pecuniary resources, he employed himself in writing for the press, and his first productions appeared in periodical publications. He compiled and translated many works, which though well received by the public, were productive of more wealth and fame to others than to himself. The principal productions of his pen which appeared under his own name were "The Secret History of King Charles II.;" "The Reign of George III to the year 1783;" a "Continuation of Rapiu's History of England;" "Night Reading for Leisure Hours," and the "Life of the Right Hon. Edmund Burke." He had also collected many valuable materials for a history of Ireland, which he intended to execute under the patronage of lord Moira, (marquis of Hastings,) a nobleman to whose beneficence he had been indebted on various occasions. But he had scarcely commenced this undertaking when he was attacked by a dropsical complaint, which occasioned his death July 29, 1807, in the sixty-fifth year of his age.—*Aikin's Athenæum.*

MACDONALD, FRAS. (JOHN) was the only son of the celebrated Flora Macdonald, who assisted prince Charles Edward Stuart so materially in evading the English soldiery, in 1746. He entered young into the service of the East India Company, in which he passed many years, and attained the rank of captain in the corps of engineers on the Bengal establishment. In 1798 he communicated to the Royal Society a continued series of observations on the diurnal variation of the magnetic needle, which he had carried on at St Helena, and at Bencoolen, in Sumatra, in the years 1794, 1795, and 1796. He was elected a fellow of the Royal Society in 1800; about which time he returned home, and was appointed lieutenant-colonel of the royal Clan-

MAC

alpine regiment, and commandant of the royal Edinburgh artillery. He was for some time stationed in Ireland. In 1803 he published "Rules and Regulations for the Field Exercise and Manœuvres of the French Infantry, issued August 1, 1791, translated from the French, with explanatory notes, and illustrative references to the British and Prussian systems of Tactics," &c. &c. 2 vols. 12mo; and in the following year a similar work, entitled "The Experienced Officer; or, Instructions by the General of Division, Wimpffen, to his Sons, and to all young Men intended for the Military Profession; being a series of Rules laid down by General Wimpffen, to enable Officers of every Rank to carry on War in all its branches and descriptions, from the least important enterprises and expeditions, to the decisive battles which involve the fate of Empires, with notes and an introduction," 8vo. Being chief engineer at Fort Marlborough in 1807, he published two more volumes, translated from the French, with explanatory notes, of "Instructions for the Conduct of Infantry on Actual Service." His last translation of this nature was entitled "The Formations and Manœuvres of Infantry, by the Chevalier Du Teil," 1810, 12mo. He published in 1811 an "Essay on Harmonics," under the title of "A Treatise explanatory of the Principles constituting the Practice and Theory of the Violoncello," in folio. In 1808 he produced "A Treatise on Telegraphic Communication, Naval, Military, and Political," in which he proposed a new telegraphic system; and in 1816 he issued a Telegraphic Dictionary, extending to 150,000 words, phrases, and sentences. But the favourite subjects of his scientific researches were magnetism, the magnetic poles, and the variation of the magnet; relative to which he contributed no less than sixteen letters to the Gentleman's Magazine. In that miscellany he also wrote on the kindred subjects of the immensity of the universe; theories of the earth; a description of the remarkable water-spout which he witnessed near Prince Edward's Island; on growth in the animal and vegetable kingdoms, and on the increase of cold above the clouds. Col. Macdonald was deeply

impressed with religious sentiments, as is apparent in most of his writings, and particularly in letters on the repairs of churches and cathedrals, and the decorum of public worship in the Gentleman's Magazine. He was a Parliamentary Reformer, and described his plan of Reform in the same miscellany; and his last communication to it was on the ballot. Among his contributions also were letters on Ireland, written when quartered there; on his own country, and the Celtic language; and on Ossian. He likewise addressed Mr Urban on the forgery of bank notes; the public funded debt; a suggested improvement in the sailing of ships; experiments on bread; tribute to the memory of the duke of York; deficiency of measure in wine bottles; the distresses of the manufacturing and labouring classes; the court of chancery; the Thames tunnel; Mr Owen's projects and machinery; and the constabulary force. Col. Macdonald resided for more than twelve years at Exeter, and he died at his residence at Summerland-place, in that city, August 16, 1831, aged seventy-two. His remains were interred in Exeter cathedral. He married Miss Chambers, daughter of Sir Robert Chambers, chief justice of Bengal, by the only daughter of Mr Joseph Wilton, the sculptor.—*Gent. Mag. Biog. Dict. of Living Authors.*

MAC EN CROE (DEMETRIUS) an Irish physician, who resided at Paris in the early part of the eighteenth century. He was the author of a Latin poem, *De "Connubiis Florum,"* first published at the beginning of the Botanicon Parisiense of Sebastian Vaillant, and reprinted in 1728, Paris, 8vo, under the name of Demetrius de la Croix, which is a French translation of the author's Irish name. A new edition of this truly elegant production was published in London, with notes by Sir Richard Clayton, subsequently to the appearance of Dr Darwin's *Loves of the Plants*, the idea of which was probably borrowed from the "*Connubiis Florum.*" Dr Mac en Croe also wrote "*Calamus Hybernicus;*" and "*Petro Desmaretz Abbati Carmen,*" 8vo.—*Rev. Encycl. Biog. Univ. Class.*

MACHA-ALLAH, or MESSAHALA, an Arabian astronomer and astrologer of the eighth century, who professed the Jewish religion. He lived in the reigns of the caliphs Mansour and Mamoun, and obtained great reputation for his skill in mathematics and astrology. He was the author of a great many works, of which a list is given by Casiri in his *Bibliotheca Arabico-Hispanica*. There is extant a Hebrew translation of his "*Treatise on Eclipses;*" and the following pieces were published in Latin at Nuremberg in 1549; "*De Elementis et Orbibus Cœlestibus;*" "*De Revolutione Annorum Mundi;*" "*De Significatione Planetarum;*" "*De Receptione.*" A Hebrew version of his "*Astrological Problems,*" by Abenezra, is to be found in the Bodleian Library.—*Biog. Univ.*

MACHIN (JOHN) an English astronomer and mathematician of the eighteenth century, who was professor of astronomy at Gresham

college, and secretary to the Royal Society of London. He was the author of a treatise on the "*Laws of the Moon's Motions,*" published with Newton's *Principia Mathematica*; a Latin memoir, "*On the Curve of quickest Descent in a given Case;*" and "*A Solution of Kepler's Problem on the Motion of Bodies in an Elliptic Orbit,*" in the *Philosophical Transactions*, besides other works.—*Ward's Lives of the Professors of Gresham College. Biog. Univ. Class.*

MACK (general baron von). This unfortunately distinguished officer, of whom an account has been previously given in the *Biographical Dictionary*, in which he is stated to have died in obscurity, was however living at the time of the publication of that work. Like some other persons, who at one period of their existence have attracted great public attention, general Mack was so completely forgotten, after his release from imprisonment, as already related, that it was generally supposed his death had taken place. It appears, however, that after being imprisoned two years, he was pardoned, and from that time he lived in retirement on a small estate in Bohemia, and is said to have had a pension from the Austrian court. Subsequently he took up his residence at Vienna, where he died October 22, 1828. General Mack published a memoir in justification of his conduct, but the most favourable judgment that can be passed concerning him, perhaps, is, that though he was no traitor, his military skill and genius were not such as to render him capable of fulfilling the duties he had undertaken.—*Month. Mag.*

MACKAY, LL.D. (ANDREW) an eminent mathematician, who was the author of a treatise on the longitude, 2 vols, 8vo; and a contributor to Rees's *Cyclopædia*. He died August 9, 1809.—*Edinb. Ann. Reg.*

MACKENZIE (GEORGE) a Scottish biographer of the seventeenth century, who practised as a physician at Edinburgh. He was the author of a work of considerable research and authority, entitled "*The Lives and Characters of the most eminent Writers of the Scottish Nation, with an Abstract and Catalogue of their Works, their various Editions, &c.*" 1708, 1711, 1722, 3 vols, folio.—*Biog. Univ. Class.*

MACKENZIE (HENRY) an ingenious essayist and writer of works of fiction, who was born in 1745, at Edinburgh, where his father was an eminent physician. After being educated at the high school and university in his native city, he was articled to an attorney, in order to acquire a knowledge of the practice of the court of exchequer; and in 1765 he went to London, to continue his professional studies. On his return to Edinburgh he became a partner, and afterwards the successor, of Mr Inglis, in the office of attorney for the crown. Attention to his professional duties did not prevent him from cultivating literature, and, in 1771, he published, anonymously, a novel, entitled "*The Man of Feeling;*" which was in a few years followed by another, called

"The Man of the World;" and he subsequently produced a third, "Julia de Roubigné, in a series of Letters." He next distinguished himself as a writer of periodical essays, after the manner of the Spectator, in which he was assisted by several gentlemen, chiefly members of the legal profession, who belonged to a society which subsisted at Edinburgh in 1778, called the Mirror Club. Hence originated the series of essays published under the title of "The Mirror," of which Mr Mackenzie was the editor, as well as a principal contributor. This paper was succeeded by "The Lounger," a work of a similar character. On the institution of the Royal Society of Edinburgh, he became one of its members, and published several papers in the transactions of that association. He was also an active member of the Highland Society, in whose transactions he published a view of the controversy respecting Ossian's poems, the authenticity of which he advocated. He likewise appeared as a dramatic writer, but with indifferent success. Among his productions were tragedies, entitled "The Spanish Father," and "The Prince of Tunis;" and two comedies, "The Farce of Fashion" and "The White Hypocrite," besides which he altered Lillo's "Fatal Curiosity." He published a political tract entitled "An Account of the Proceedings of the Parliament of 1784," which introduced him to the notice of Mr Pitt; and some years after he was appointed to the office of Comptroller of the Taxes for Scotland. In 1808 Mr Mackenzie published a complete edition of his works in 8 vols. 8vo. including Lives of Dr Thomas Blacklock and John Home, esq. He died January 14, 1831.

Ann. Biog.

MACKENZIE (JAMES) an ingenious English physician and medical writer who died in 1761. He was the author of a popular treatise on "The Art of Preserving Health," 1758, 8vo, which was translated into French.

—*Orig.*

MACKINTOSH (Sir JAMES) a celebrated British statesman and lawyer, who was born at Dore, in Invernesshire, N.B. in 1766. He was the son of John Mackintosh, esq. of Kellachie, a military officer; and he received his education at a school at Fortrose and King's College, Aberdeen. Thence he removed to Edinburgh, where he remained three years as a student of medicine in the university, and in 1787 he took the degree of M.D. But the death of his father leaving him at liberty to consult his own inclinations, he relinquished the idea of becoming a physician, and turned his attention to general literature. Going to London, in 1789, when the regency question occupied the public, he wrote a pamphlet in support of the claims of the prince of Wales, but it attracted no notice, and the author, discouraged by his failure, resumed his medical studies. To prepare himself for entering on professional practice he went to Paris. The French Revolution, which had then just commenced, gave a new impulse to his mind, and politics and legisla-

tion became the paramount objects of his attention. He had adopted liberal principles, and he made the first display of his talents in a work entitled "Vindiciæ Gallicæ, or a Defence of the French Revolution and its English Admirers against the Accusations of Edmund Burke, including some Strictures on the late Productions of Calonne," 1791, 8vo. This publication not only procured him literary fame, but also the friendship of Mr Fox, and other distinguished persons belonging to the same party. Probably through their advice he entered as a student of Lincoln's Inn, in 1792. After a time he proposed delivering a course of lectures on the Law of Nature and of Nations, and having, after some demur, obtained permission from the benchers, he executed his purpose; and he published the introductory lecture, which gained the approbation of Mr Pitt. Having been called to the bar, he was employed, in 1803, as the advocate of M. Peltier, who was prosecuted for a libel on Buonaparte; and though unsuccessful for his client, he obtained high reputation for himself by his powerful exhibition of eloquence on that occasion. Soon afterwards he was appointed to a judicial office in India, (the recordership of Bombay,) where he remained till 1811, and then returned to England in ill-health. Sir James Mackintosh (for he had received the honour of knighthood) entered the House of Commons as representative of the Scottish county of Nairn, in July, 1813. His early speeches in parliament are said to have disappointed expectation; but on the occasion of the escape of Buonaparte from Elba, he delivered one of the most splendid harangues ever heard in the senate. As a member of the legislature he distinguished himself by his efforts towards the amendment of our criminal code, a task which had been commenced by Sir Samuel Romilly. Among other topics which exercised his talent may be mentioned, the Droits of the Admiralty, the affairs of Naples, the Congress of Laybach, the state of the Catholics in Ireland, the oppression suffered by the Greeks, the introduction of the jury-law into Scotland, and the government of New South Wales. He was gratified at the extension to the Catholics of privileges which had so long been injuriously withheld, nor did he the less readily promote the measure because it was carried by his political opponents. When his own friends attained power, he warmly cooperated with them in the grand project for the reformation of the House of Commons; and he had the satisfaction to be assured of its success, though he died before the bill in question had actually passed. His death occurred on the 30th of May, 1832, at his house in Langham-place, London. Sir James Mackintosh, after his return from India, announced his having undertaken the composition of a history of England, from the Revolution, as a supplement to Hume's history; but no part of it was ever published. Besides the works mentioned above, he was the author of an abridgement of English history, and *Memoirs of*

Sir Thomas Moore, for Dr Lardner's Cabinet Cyclopædia and Library; and of a Dissertation on the History of Moral Philosophy, prefixed to the Edinburgh Encyclopædia; besides which he was a contributor to the Monthly and the Edinburgh Reviews. In 1822 he was elected lord rector of the university of Glasgow, as he also was the following year.

MACLAURIN (JOHN) lord Dreghorn, son of Colin Maclaurin, was born at Edinburgh in 1734. He became a member of the faculty of advocates in 1756; and in 1787 he was raised to the bench, and created lord Dreghorn. His works were collected in two volumes, octavo, 1799; they are "A Collection of Criminal Cases;" "An Essay on Literary Property;" "Essay on Patronage." He died in 1796.—*Gen. Biog. Dict.*

MACLEOD, MD. (JOHN) a medical practitioner and voyager, born about 1782, at Bunnhill, in the county of Dunbarton in Scotland. He entered into the navy as a surgeon, and after several expeditions he accompanied the embassy to China under lord Amherst. Returning to England he published "The Voyage of the Alceste to the Island of Lewchew, &c." He died November 9, 1820.—*Lit. Gaz.*

MACNAB, MD. (HENRY GREY) physician in ordinary to the duke of Kent, was born about 1762. He became professor of rhetoric at the university of Glasgow. On the sudden occurrence of hostilities after the peace of Amiens, happening to be in France, he was detained as a hostage, and he remained there till the Restoration. Being habituated to the manners of the country, he returned and fixed his residence at Paris, where he died in 1823. He was the author of "A Synopsis of a Course of Lectures on Elocution," 1787, 8vo; "An Impartial Examination of the New Views of Mr Robert Owen," which was translated into French by M. Lafont de Ladebat, and various political tracts.—*Biog. Univ. Class.*

MACNALLY (LEONARD) an Irish lawyer and dramatic writer, who was born in Dublin in 1752. He entered as a student of the Middle Temple, and was called to the Irish bar in 1776, but he afterwards removed to London. He subsequently returned again to his native country, and died at Dublin in 1820. Among his theatrical productions are, "Retaliation," a farce, 1782; "Robin Hood, or Sherwood Forest," a comic opera, 1784; "Fashionable Levities," a comedy, 1785; and "Richard Cœur de Lion," an opera, 1786. He also wrote in the Public Ledger, and other journals; and he was the author of "The Rules of Evidence," 1803, 2 vols, 8vo; and "The Irish Justice of the Peace," 1808, 2 vols, 8vo.—*Theat. Dict. Biog. Univ. Class.*

MADERNO (CARLO) a distinguished Italian architect, born in 1556, at Bissona, in the diocese of Como in Lombardy. After being employed in the construction of various ecclesiastical buildings, he was appointed architect of St Peter's at Rome, and ordered by pope Paul V to complete that magnificent edifice, in the execution of which undertaking he is

charged by Milizia with having committed some important errors. He obtained, however, many other engagements, and there are said to be few public buildings at Rome of the age in which he flourished, for which he did not furnish designs. The Maffei palace is reckoned the finest among the works of this architect. He died at Rome in 1629.—*Orlandi Abeced. Pitti.*

MADERNO (STEPHEN) a sculptor, born in Lombardy in 1576. He copied the chef-d'œuvres of antiquity; and executed several original works of great merit, particularly a bas-relief, representing a battle, in the church of St Maria Major, and the model of a bas-relief in bronze, exhibiting the history of the foundation of that church. He died in 1636.—*Biog. Univ. Class.*

MADRID (J. F. de) a Columbian diplomatist, who distinguished himself by the cultivation of literature. He was for several years minister from the republic of Columbia to the government of this country, which post he held at the time of his death, in 1830. He acquired the reputation of having been one of the most successful imitators of the great poets who made the Spanish language the vehicle of their noble productions. He was the author of "Atala," a tragedy, the subject of which has been rendered familiar to European readers by the similarly entitled tale of Chateaubriand; "Guatimoq, or Guatimozin," a tragedy, published at Paris in 1827, founded on the affecting history of the last emperor of Mexico; and various poetical compositions of a lighter kind, displaying harmony of style and command of language; besides a Spanish translation of the abbé Delille's poem entitled "Les Trois Règnes de la Nature."—*Rev. Encycl. Edit.*

MAGEE (WILLIAM) a learned divine and theological writer. He was born in humble life, and was admitted as sizer at Dublin university, of which he was afterwards the distinguished ornament. He was for some time assistant professor of the oriental languages. About 1806 he became a senior fellow of Trinity College, and professor of mathematics. His talents as a writer, and his theological research, were rewarded with high preferment in the church. In 1801 he published his celebrated "Discourses on the Scriptural Doctrines of the Atonement and Sacrifice," 2 vols, 8vo. This work, which was dedicated to lord Plunket, now lord chancellor of Ireland, consists of two sermons with notes, particularly directed against the opinions of the Unitarians. The style is peculiarly striking, and the notes, which are lively, terse, and elegant, have been compared with those which are appended to The Pursuit of Literature. In consequence of the reputation which this work procured him, Dr Magee was, in 1818, advanced to the deanery of Cork; in 1819 he was consecrated bishop of Raphoe; and in 1822 he was translated to the see of Dublin. He died of palsy, August 18, 1831, aged sixty-six, at Redesdale-house, near Stillorgan, in the county of Dublin. Besides the works

already mentioned, he published "A Thanksgiving Sermon on the delivery of this Kingdom from Invasion, 1797; "A Sermon occasioned by the Death of the Earl of Clare," 1802; and a "Memoir of Thomas Percival, MD, FRS, and SA."—*Ann. Biog. Cap. Ann. Reg.*

MAGEOGHEGAN (JAMES) an Irish historian, born in 1702, and died in 1764. He was a priest of the church of St Mery at Paris, and was the author of an "Ancient and Modern History of Ireland," Paris, 1758—63, 3 vols, 4to. This work concludes with a "Sketch of the History of the Four Stuarts on the British Throne."—*Biog. Univ. Class.*

MAGNÆUS or MAGNUSSON (ARNAS) an Icelandic historian, who died in 1730 at Copenhagen, where he was professor of history. He published several works relative to the early history of Denmark, and other northern countries; and he left materials for a "Collection of the Sagas," edited by Jonas Jönæus, Copenhagen, 1780, 4to.—*Ibid.*

MAICHEL, or MAICHELIUS (DANIEL) a learned German writer on criticism and philology, born at Stuttgart in 1693. He was appointed professor of theology and philosophy at Tübingen in 1724; and in 1739 he became professor of natural law and politics. In 1749 he was made abbot of Königsbrunn; and his death took place in 1752. Besides several other works, he was the author of a treatise entitled "Introductio ad Historiam Litterarum de Præcipuis Bibliothecis Parisiensibus," published at Cambridge in 1720, 8vo.—*Biog. Univ. Class.*

MAILLY (JOHN BAPTIST) a French historical writer, born at Dijon in 1744. He became professor of history at the college of Godran, and a member of the academy of Dijon, where he died in 1794. Among his principal works are "L'Esprit de la Fronde," Paris, 1772, 5 vols, 12mo; "L'Esprit des Croisades," 1780, 4 vols, 12mo; and "Fastes Juifs, Romaines, et Français," 1782, 2 vols, 8vo. He also published some discourses, letters, and poems; and he was the principal conductor of the *Affiches Littéraires de Bourgogne*, in 1776 and 1777.—*Ibid.*

MAIZEROI (PAUL GEDEON JOLY de) a French officer and writer on military affairs. He was born at Metz in 1719, and entered into the army at the age of fifteen. He made a campaign in Bohemia under the command of the count de Saxe; and he afterwards served in Flanders, and was at the battles of Raucoux and Lafeldt. At length he attained the rank of lieutenant-colonel, which he held from 1756 to 1763. Peace taking place, he consecrated his leisure to the development of the principles of tactics and military science, uniting with his own experience the study of ancient authors. His translation of the Military Institutions of the emperor Leo procured him admission into the Academy of Inscriptions and Belles Lettres in 1776; and his military talents were rewarded with the rank of brigadier-general. He died in 1780. A list

of his numerous works may be found in the annexed authority.—*Ibid.*

MALCOLM, GCB, and KLS. (Sir JOHN) a military officer, diplomatist, and historical and political writer of eminence, who was born May 2, 1769, at Burnfoot, near Langholm, in Dumfriesshire, N.B. In 1782 he went out to the East Indies, as a cadet in the Company's service; and he was present at the siege of Seringapatam, in 1792, when his ability attracted the attention of lord Cornwallis, who appointed him to the office of Persian interpreter to a body of British troops in the service of one of the native princes of India. His health having been impaired by fatigue and the heat of the climate, in 1794 he returned to his native country; but the following year he again went out to India, on the staff of field marshal Sir Alured Clarke; and he subsequently received public thanks from that officer, for his conduct at the taking of the Cape of Good Hope. In 1794 he obtained a captain's commission, and from that period till 1799 he was engaged in various important services. He then received instructions to join the contingent force of the Nizam, with the chief command of the infantry, in which post he continued, acting in a civil as well as a military capacity, till the surrender of Seringapatam, where he greatly distinguished himself. The same year he was intrusted by lord Wellesley with a diplomatic mission to the court of Persia, which had not been visited by any English ambassador since the reign of queen Elizabeth. On his return to Calcutta he was made private secretary to the governor-general, who informed the secret committee that Mr Malcolm had succeeded in accomplishing every object of his mission, and in establishing a connexion with the actual government of the Persian empire, which promised to the British in India political and commercial advantages of the most important description. In January 1802 he was promoted to a majority. The Persian ambassador having been shot by accident at Bombay, major Malcolm was again despatched on a mission to Persia, to form arrangements for the renewal of the embassy; and he accomplished that object in a satisfactory manner. In December, 1804, he was raised to the rank of lieutenant-colonel; and in June, the next year, he was appointed chief agent of the governor-general, which office he held till March, 1806; having in the course of that period concluded several important treaties with the native princes. Lord Minto having arrived in India as governor-general, in April 1808, colonel Malcolm was employed by his lordship as a diplomatic agent to counteract the designs of Buonaparte, who had sent general Gardanne as his ambassador to the court of Persia; and who appears to have meditated an invasion of British India, with the cooperation or connivance of the Persian and Turkish governments. The British ambassador proceeded to Taheran, the Persian capital; but though he had the advantage of being known on account of his former embas-

sies, he was unable to counteract the influence of the French ambassador, who however was afterwards suddenly dismissed, on the arrival of sir Harford Jones, who was sent by the British government to Taheran. Col. Malcolm having returned to Calcutta in the month of August, 1808, soon afterwards proceeded to his residence at Mysore. Early in 1810 he was again selected to proceed with a diplomatic commission to the court of Persia, where he remained till the appointment of sir Gore Ouseley, as ambassador. On this occasion he obtained great favour with the shah of Persia, who presented to him a valuable sword and star ornamented with jewels, and also made him a khan and sepahdar of the empire. During this mission colonel Malcolm drew up a report on the public affairs of Persia, containing much valuable information, which he transmitted to the government in Bengal. In 1812 this active and meritorious officer revisited England; when he was received by the court of directors of the East India company with the warmest acknowledgment of his services; and soon afterwards he obtained the honour of knighthood. He returned to India in 1816, and ere long became engaged in extensive affairs both civil and military. He was attached, as the political agent of the governor-general, to the body of forces under the command of lieutenant-general Sir Thomas Hislop; and was also appointed to head the third division of the army, with which, after taking Talm by surprise, he highly distinguished himself at the famous battle of Mehidpoor, when the army of Mulhar Rao Holkar was defeated and put to flight. His conduct on this occasion procured him a vote of thanks from the House of Commons, on a motion made by Mr Canning, who characterised him, as "a gallant officer, whose name would be remembered in India as long as the British flag was hoisted in that country." His conduct was also noticed by the prince regent, who expressed his regret that the circumstance of his not having attained the rank of major-general prevented his being then created a knight grand cross, which honour however was conferred on him in 1821. After the termination of the war with the Mahrattas and Pindarees, he was employed by lord Hastings in visiting and settling the distracted affairs of the territories of Mulhar Rao, which he effected in a satisfactory manner; and gained for the British Indian government a large accession of wealth and territory. In April, 1822, he made another visit to his native country, with the rank of major-general; and shortly after he was presented, by those who had been employed under him in the war in India, with a superb vase, valued at 1500l. The court of directors of the East India Company likewise testified their sense of his merits by a grant of 1000l. a year. He had intended when he quitted India to spend the remainder of his life in England; but at the solicitation of the British government and the East India directory, he proceeded again to India in July, 1827, having been appointed to the highly

responsible and important post of governor of Bombay, where he continued till 1831. While he held that office he acted in such a manner as to acquire the general esteem of the people over whom he presided, both the natives as well as his own countrymen. When he left Bombay he was requested by the European gentlemen there to sit for his statue, since executed by Chantrey, to be erected at Bombay; the Asiatic Society desired to have his bust for their library; and various other honours were paid him. Shortly after his arrival in England in 1831, Sir J Malcolm was returned to parliament for the borough of Launceston; and he took an active part in the proceedings of the House of Commons on several occasions, especially on the Scotch Reform Bill. He often spoke at considerable length, displaying an intimate acquaintance with the history and constitution of his country; but he was not qualified by his voice or manner to excel as an orator. On the dissolution of parliament in 1832 he became a candidate for the Dumfries district of boroughs; and not succeeding on canvassing he retired, and offered himself for the city of Carlisle, where the result of the first day's poll decided the election against him. He then retired to his seat near Windsor, where he employed himself in writing a work on the government of India, since published. The last occasion on which he prominently appeared in public, was at a general court of the proprietors of East India stock, when he made an able speech introductory to resolutions relative to the proposals of government for the renewal of the Company's charter; and his resolutions were, after several adjourned discussions, carried by a large majority. His death took place April 30, 1833, at his house in Princes-street, Hanover-square, London. As a man of letters, Sir J Malcolm principally distinguished himself by the production of an elaborate "History of Persia, from the Earliest Period to the present Time," 2 vols, 4to; containing information derived from oriental sources. Among his other works may be mentioned "A Sketch of the Sikhs," a singular nation in the province of the Penjab, in India; "Sketches of Persia," 2 vols, 8vo; and "A Memoir of Central India." For some time previous to his decease he had been engaged in writing a life of Lord Clive, and editing his papers.—*New Month. Mag.*

MALET (CLAUDE FRANCIS de) a French general, born at Dole in 1754. He became a general of a brigade, and served under Massena in Italy in 1805. He was made governor of Pavia, but being attached to republican principles he opposed the plans of Napoleon, and was consequently removed and disgraced. Returning to Paris he engaged with generals Guidal and Lahorie in a plot against the imperial government, which being discovered, they were all arrested and shot, October 29, 1812. An account of the conspiracy of Malet may be found in *Histoire des Sociétés Secrètes de l'Armée*, 1815; and, Malet, ou Coup-d'œil sur l'Origine, &c. des Conjurations formées en

M A N

1808 et en 1812, Paris, 1814, 8vo.—*Biog. Nouv. des Contemp. Biog. Univ. Class.*

MALEZIEU (NICHOLAS de) preceptor to the dukes of Maine and Burgundy, was born at Paris in 1650. On the disgrace of the former, Malezieu was imprisoned, and remained two years in confinement. He was a member of the French Academy, and of the Academy of Sciences. He died in 1727. He wrote "Elements of Geometry;" "Miscellaneous Pieces in Verse."—*Moreri*.

MALTE-BRUN (CONRAD) a distinguished French writer, born in 1775 at Thyé, in the island of Jutland. He was originally intended for the church, but his inclination led him to devote himself to literary pursuits. He studied at the university of Copenhagen, and having given offence by his political writings he was banished to Sweden in 1796. At Stockholm he published a volume of poems, which was crowned by the Swedish Academy. He subsequently took up his residence at Paris, where he acquired great reputation, especially as a geographer. In 1806 he became a co-operator in the *Journal des Débats*, to which he continued attached till his death, which occurred at Paris, December 16, 1826. He published, in conjunction with Mentelle, "Géographie Mathématique, Physique, et Politique," Paris, 1804—7, 16 vols, 8vo; "Tableau de la Pologne Ancienne et Moderne," 8vo; "Précis de la Géographie Universelle," 1820—7, 7 vols, 8vo, which has been translated into English, besides various other works; and he was a contributor to the *Biographie Universelle*.—*Rev. Encycl. Biog. Univ. Class.*

MANARA (PROSPER, marquis) an Italian poet, was born in 1714, in the duchy of Parma. He was tutor to the young prince Ferdinand, and chamberlain to the duke, in which situations he so distinguished himself as to receive many honours. He died in 1800. The following year his works were published by Bodoni, with his life, in 4 vols, 12mo.—*Biog. Univ.*

MANNERS (JOHN) marquis of Granby, the son of John, duke of Rutland, was born in 1721. During the rebellion he raised a regiment of foot. In 1758, being lieutenant-general, he was sent into Germany, and served under prince Ferdinand of Brunswick with distinction. He died at Scarborough in 1770.—His eldest son, CHARLES, duke of Rutland, was lord-lieutenant of Ireland, and died in 1787.—Lord ROBERT MANNERS, another son, was captain of the Resolution man-of-war, and was killed in an engagement with the French in 1782.—*Collins's Peerage*.

MANTELL (SIR THOMAS) knight, FAL. and HSS. He was the only son of a surgeon at Chilham in Kent; and adopting the same profession, he settled at Dover, and was actively engaged for some years in medical practice, which he relinquished on being appointed agent for prisoners of war and transports. This office led to his being placed at the head of the packet department at Dover, on peace taking place in 1814, a post which, from the state of our foreign relations, required

M A N

the most unremitting care and attention. He published a brief treatise in 1787, entitled "Short Directions for the Management of Infants," 12mo; and to the *Memoirs of Medicine*, he furnished an account of a surgical operation. In 1810 he was chosen a fellow of the Society of Antiquaries. He published a small quarto tract, in 1811, containing "An Account of the Cinque Ports' Meetings called Brotherhoods and Guestlings;" and in a second edition of the tract printed in 1828, he has preserved an accurate account of the proceedings at one of the last of those meetings. He published another small quarto tract in 1820, on "Coronation Ceremonies and Customs, relative to the Barons of the Cinque Ports as Supporters of the Canopy;" and in the same year, he being then mayor of Dover, he obtained the distinction of knighthood. He formed an extensive collection of valuable materials, including documents relating to the Cinque Ports, which he designed as the basis of a History of Dover; but the pressure of his official duties and numerous avocations prevented him from executing his design of such a publication. In the course of his antiquarian pursuits he examined some of the tumuli in various parts of Kent; and formed an interesting collection of ancient relics. His death took place at his residence at Dover, December 21, 1831, at the age of eighty.—*Gent. Mag. Ann. Biog.*

MANUEL (JACQUES ANTOINE) an eminent French statesman, who was born at Barcelonnette in the department of the Lower Alps. He was educated at Nîmes, and returning to his native place at the period when revolutionized France was menaced with foreign invasion, he entered into the army, and being sent into Italy, he was among the number of the young soldiers who passed three years amidst the snows of the Col de Tende, exposed to hunger and other hardships. With them he descended into the plains of Italy under the command of Buonaparte; and he was present at the battles of Montenotte, Lonato, Rivoli, and Tagliamento. He quitted the service after the peace of Campo Formio; and adopting the law as a profession, became a member of the bar at Aix, where he continued to practise with great reputation during fifteen years. The return of Buonaparte from Elba in 1815 having occasioned a temporary cessation of business in the provincial courts of justice, he took the opportunity for a visit to Paris, which he had never before seen. On his arrival there he received the news of his election as a deputy to the Chamber of Representatives for the department of Lower Alps. After the second restoration of the Bourbons he sold his property in the country, and settled at Paris, with the design of continuing the practice of his profession; but he was refused admission to the metropolitan bar on account of his politics. In 1818 he was chosen a member of the legislature both for the department of Finistère and that of La Vendée, when he took his seat for the latter. His liberal and independent conduct as a senator rendered him an object of the hatred

of a powerful party. At the opening of the session of 1820, he opposed the exclusion of the deputy from the Isère, M. Gregoire; on the 1st of May following, he presented the project of an address to the king urging the adoption of measures to avert the dangers which threatened the throne; and in the ensuing session he continued his efforts to unmask the enemies of the national liberty. On the 27th of February 1823, he spoke on the question of war with Spain, and replied to the observations of the Minister for Foreign Affairs. A tumult arose in the chamber, he was charged by some of the members with preaching regicide, and a motion was made for his expulsion. This was carried, and on his reappearing in the chamber on the 4th of March, when he refused to submit to the order of the president, the national guards and gendarmes were called in, and he was forcibly excluded. The remainder of his life was passed in retirement; and his death took place at Maisons-sur-Seine, near Paris, August 20, 1827.—*Biog. Nouv. des Contemp. Rev. Encycl.*

MANUEL (DON JUAN) a Spanish poet of the fourteenth century, illustrious for his high descent. He was the son of Don Ferdinand, uncle of the king of Castile and Leon, duke of Pennafiel, and marquis of Villena. He was alike distinguished for learning and genius, and for his prowess in the wars with the Moors. His principal production is a poem entitled "El Conde Lucanor," first published at Seville, 1575, 4to, by Gonzalo Argote de Molina. There are other works written by D. Juan Manuel, both in prose and verse, of which a list may be found in the Bibliotheca Hispanica of Nicholas Antonio. He died at Cordova, in 1362.—*Maury Espagne Poétique.*

MARA (ELIZABETH) a celebrated public singer, whose family name was Schmelling. She was born about 1750, at Cassel, in Germany; and it is said that her early years were devoted to the study of the violin, on which she played in England while yet in childhood. But she quitted that instrument, as not adapted for a female musician, and applied herself to the cultivation of her talents for singing. Her studies were attended with the utmost success, and she attained an almost unrivalled degree of excellence as a vocal performer. On her arrival at Berlin, at the age of twenty-four, Miss Schmelling sung before Frederic the Great, who was not a little vain of his own skill and knowledge of music, and though he had previously declared that he should as soon expect pleasure from the neighing of his horse as from a German singer, yet one song convinced him of his error, and of the extraordinary ability of the young vocalist. He put the latter to the severest test, by selecting the most difficult airs in his collection, which she executed at sight, with the utmost facility. From 1767 to 1783 she travelled in Germany and Switzerland; and she visited Naples at a period subsequent to her appearance in England. She afterwards returned to this country in the

height of her fame, and continued here for some years, holding the highest rank in her profession. She possessed great power and a most extensive compass of voice, all her notes being alike clear, even, and strong. Her tone is said not to have been so sweet or so clear as Mrs Billington's, nor so rich and powerful as Catalani's, but in expression she was inferior to neither; and on her dominion over the feelings of her audience rests her claims to fame. Madame Mara left England in 1802, her last performance previous to her departure having taken place June 3rd that year, when she sung a duet with Mrs Billington, and came off from the trial of skill with undiminished reputation. She subsequently resided in Russia; and when that country was invaded by Buonaparte in 1812, she became a sufferer, in consequence of the destruction of her property, at the conflagration of Moscow. About the beginning of 1820 she revisited the British metropolis, and gave a concert at the Opera House; but age had weakened her physical powers, if it had not impaired her musical skill and science, and this once matchless singer exhibited only the relics of her former greatness. Her death took place at Revel, January 20, 1833, in the eighty-third year of her age.—Her husband, JOHN MARA, was a native of Berlin, and a performer of some note on the violoncello; but the indulgence of habits of intemperance proved his ruin, and he died in great misery at Scheidam, near Rotterdam, in Holland, in the summer of 1808.—*Burney. Biog. Dict. of Mus.*

MARCET, MD. (ALEXANDER) an eminent physician, chemist, and natural philosopher, who was born at Geneva in 1770. He went to Scotland in 1793, and studied at Edinburgh, where he took his degrees. He then settled in London, and obtained great reputation as a medical practitioner and public lecturer, as well as by his various important scientific discoveries. He was naturalized in England in 1802, but in 1814 he returned to his native country. The reception which he experienced from his fellow-citizens, who nominated him a member of the supreme council of Geneva, determined him to fix his future residence in that city; but having made a visit to London, where he had remained a year, he was about to take his departure, when he died October 19, 1822. He published many valuable papers in the Philosophical Transactions, and in various scientific journals, besides "An Essay on the Chemical History of Calculi," 8vo.—*Bibliothèque Universelle de Genève*, t. xxi. *Biog. Univ. Class.*

MARTIGNAC (—) a distinguished French advocate and minister of state. He was long known as a man of capacity, and was one of the best speakers in the Chamber of Deputies, but till the termination of M. de Villele's ministry he acted only a subordinate part in office. At the time when a French army was sent to overthrow the constitution of Spain, M. de Martignac was employed by Villele as the counsellor and guiding genius of the Duke d'Angoulême; and all the

moderation and sagacity shown by that prince during his Spanish campaign may fairly be ascribed to the advice of his mentor. He took no part in the overthrow of his former patron M. de Villele, but after that event he entered into the ministry, and had Charles X been wise enough to adopt his councils he might have been the means of saving the monarchy. But that prince practised the basest treachery towards his faithful servant. He first tried to destroy his popularity, by compelling him to withdraw abruptly bills which he had allowed him deliberately to introduce, he permitted him to promise similar measures for the ensuing year, and no sooner had he brought the session to a conclusion than he dismissed him from his office, to make room for his rival in the royal favour. The result of the French monarch's unprincipled policy proved his own punishment, and he became an exile from the country he had misgoverned. M. de Martignac did not give up his loyalty to his ungrateful sovereign, nor deny his services to preserve the life of his rival. On the trial of the ex-minister Polignac before the Chamber of Peers, he was eloquently defended by the statesman whom he had supplanted, who appears to have injured his own health by his exertions on that occasion. He died in 1832. An account of M. de Martignac's Spanish mission was announced for publication, and a fragment was given as a specimen, but it was probably never finished; and his speech for Polignac must perhaps remain the only considerable monument of his fame.—*Times Newspaper*.

MARTIN (ТЮМАС) an antiquary, was born at Thetford in Suffolk, in 1697. His brother was an attorney, and he served him as clerk. He settled at Palgrave in 1723, whence he acquired the familiar appellation of "Honest Tom Martin of Palgrave." He wrote a "History of the town of Thetford," published eight years after his death, which took place in 1771.—*Nichols's Lit. Anec.*

MARTINE (ГЕОРГ) a physician, was born in Scotland in 1702. He studied at Leyden, where he took his doctor's degree. On his return he practised at St Andrew's. In 1740 he accompanied lord Cathcart to America, and died there in 1743. His works are "Essays, Medical and Philosophical," 8vo; "Tractatus de Similibus Animalibus, et Animalium Colore;" and "Georgii Martinii in Barth. Eustachii Tabulus anatomicas Commentaria," 8vo, the latter edited by Dr Monro.—*Gen. Biog. Dict.*

MARTINEZ (ХЕНРИКО) a Mexican engineer, who received his education in Spain, where he acquired an intimate knowledge of mathematics, geography, and hydraulics. He received from the king the title of royal cosmographer, and returning to Mexico he was employed in 1607 to construct the canal of Huehuetoca, in order to prevent the inundations of the lake of Mexico. He experienced great interruptions in the prosecution of his design, and died before it was completed.

Martinez was the author of a treatise on trigonometry, printed at Mexico.—*Biog. Univ.*

MATTHESON (JOHN) an eminent musical composer and performer, who was born at Hamburg, in 1681. He began studying when young, and improved so fast, that at the age of nine he was able to sing to the organ compositions of his own, and at the age of eighteen he composed an opera, and performed in it the principal part. In 1703 he was offered the situation of organist in the church of Lubeck, which he declined, as he did afterwards a similar situation at Haarlem; but returning to Hamburg he became secretary to the English resident in that city, which office he held for several years, during which he was intrusted with the conduct of various important negotiations. During this period he did not relinquish the study of music, and when George the First succeeded to the crown of England, he composed a serenata on the occasion. In 1715 he obtained the reversion of the office of chapel master in the cathedral of Hamburg, with certain appointments annexed to it. He still continued to hold his fiscal situation, and amidst the multiplicity of business in which it involved him, he continued to prosecute his musical studies. He composed music for the church and for the theatre, and was always present at the performance of it; he practised on the harpsichord with unremitting attention, and on that instrument he was reckoned one of the best performers of his time. He wrote and translated a great number of books on various subjects, displaying, however, more learning than judgment. He composed anthems and operas, and he produced treatises on music and on the longevity. Mattheson was intimate with Handel, though before the latter settled in England they were in some degree rivals for public favour, and on one occasion, in consequence of a dispute on a trivial subject, they fought a duel in the Market-place of Hamburg, which was only prevented by accident from being attended with fatal consequences. This distinguished musician died at Hamburg, in 1764.—*Biog. Dict. of Mus.*

MATTOCKS (ISABELLA) an eminent actress, who was born in 1746. She was the daughter of Mr Hallam, a theatrical performer, whose father, a member of the same profession, was killed at a rehearsal in a dispute with Macklin. Mr Hallam, jun. went to America, and became manager of the theatres of New York, Charlestown, and Philadelphia, by which he gained a fortune of 10,000*l.* which his family lost through the American war. The subject of this article was educated by her aunt, Mrs Barrington, an actress; and at the age of between four and five she performed the part of the parish girl, in the *What d'y call it?* at Covent Garden. A few years after she appeared in Juliet, but with little success. At length she distinguished herself as a comic singer and dramatic performer in the parts of Abigail, citizens' wives, &c. She married Mr Mattocks, an actor at Covent Garden; but though it was a love match, concluded in

spite of the opposition of the lady's friends, the union was unfortunate, and terminated in a separation. After having been long a favourite with the public, Mrs Mattocks retired from the stage about twenty years ago; and she died at Kensington, where she had long resided, June 25, 1826.—*Theop. Dict. Ann. Biog.*

MAUREPAS (JOHN FREDERICK PHELY-PEAUX, count de) a French statesman, was born in 1701. He was appointed minister of state in 1738, but having displeased a lady of the court, at her instigation he was banished in 1749. He was recalled in 1774, and was the means of interesting France in the disputes between England and America. He died in 1781. His memoirs are published in 4 vols, 8vo.—*Dict. Hist.*

MAWE (JOSEPH) an eminent mineralogist and conchologist, who was born about 1755. His first literary production was a volume entitled "The Mineralogy of Derbyshire, with a description of the most interesting mines in the North of England, Scotland, and Wales," 1802. Subsequently to the production of this work, he undertook a commercial voyage to Rio de la Plata. On his arrival at Monte Video his ship and cargo were seized, and, on the appearance of the expedition from England under general Beresford, he was banished into the interior of the country. After he recovered his liberty he went to Brazil, where he was well received by the prince regent, afterwards John VI, of Portugal, by whom he was employed, in 1810, to survey the extensive gold and diamond districts, and also to investigate the state of agriculture in that country, which task he performed in a manner satisfactory to his employer. On his return to England he published "Travels in the Interior of Brazil," 1812, 4to, containing the most faithful and interesting description of the Brazilian states which had then appeared. This work passed through numerous editions, and has been translated into several languages. In 1813 appeared his "Treatise on Diamonds and Precious Stones," a work of considerable merit; and he also produced "Familiar Lessons on Mineralogy and Geology;" "An Introduction to the Study of Conchology;" "The Linnæan System of Conchology;" and "A New Descriptive Catalogue of Minerals." Mr Mawe, who was a member of the Mineralogical Society of Jenna, and the Geological Society, for several years during the latter part of his life, kept a shop in the Strand, London, for the sale of mineral specimens and other natural curiosities. He died October 26, 1829. *Month. Mag.*

MEIKLE (—) an ingenious Scottish mechanic, who may be regarded as the inventor of the threshing machine, an instrument of vast importance in rural economy, and which has recently been the object of most absurd and mischievous prejudice among the peasantry of this country. This machine, which had long been a desideratum in husbandry, after a great many unsuccessful attempts, was completed in all its essential

Aff. Biog. Dict.

parts, by the subject of this article, who was a mill-wright in East Lothian, N.B., about the year 1786, though it subsequently received considerable improvements, both from the inventor and from others. The corn-farmers in the Lowlands of Scotland displayed their high opinion of the utility of this invention, by presenting to the artist a handsome sum of money. Mr Meikle died, at an advanced age, in 1811.

MELÉNDEZ (don JUAN) a Spanish poet, born in 1754, of a distinguished family. In 1783 he was competitor with Yriarte for the chief prize offered by the Castilian Academy of Madrid for the improvement of the Spanish language; and he was declared victor by the general suffrages of the academicians. Two years afterwards he published a volume of poems. His success as an imitator of the style of Anacreon in his cancioncs and romances, has been compared with that of La Fontaine in his improvements on Æsop and Phædrius as a fabulist. The smiling beauty of his imagery, the rich colouring given to his pictures, his easy and elegant diction, true to taste as his pictures are to nature, and the delightful harmony and spirited expression of his verse, render him deservedly the favourite of his countrymen. His second volume of poems, published during the ministry of Godoy, many years after the former, presented his poetical character in a new point of view,—those maturer compositions being as much distinguished for sublimity and serious dignity of sentiment as his preceding effusions were for melody and airy grace. His "Ode to the Stars" may be classed with the best lyrics in the Spanish language; and among his lighter pieces is a pleasing Address to his friend Jovellanos. After the revolution of Aranjuez, Melendez, recalled from exile to Madrid, accepted a mission of peace from the lieutenant-general of the kingdom. He set off for Oviedo, but being capitally and unjustly charged as a traitor, he was committed to prison, with his colleague the count del Pinar, released, a second time imprisoned, and released again. On the point of his departure, the infuriated and misguided populace broke his carriage and hastily prepared to dispatch him with their fusils. The poet in vain recited one of his ballads, well calculated to calm their rage, but it only procured a momentary suspension of their purpose till their intended victim should decide whether he would be shot in front or rear. This slight hesitation and delay, however, saved him, for the Cross of Victory, as it was called, approaching the spot, the enraged crowd fell on their knees, and relinquished their threatened victim. Being acquitted on a former trial, he succeeded in reaching Madrid, where he was found by Buonaparte. His celebrity marked him out for an important office, the offer of which it might probably have been more dangerous for him to refuse than accept. On the retreat of the French from Spain, Melendez, as one of the Afrancesados, prepared to accompany them. As he was about to quit

P

his natal soil, he knelt upon the ground and kissed it, exclaiming, "I shall never tread thee more." He died at Montpellier, in 1817.—*Maury Espagne Poétique. Rev. Encycl. For. Rev.*

MENARD (CLAUDE) an antiquary and magistrate at Angers, was born in 1582. On the death of his wife he became an ecclesiastic, and died in 1652. His works are "Researches concerning the Body of St James the Great;" "Joinville's History of St Louis," with notes, 4to; "The two Books of St Austin against Julian;" "History of Bertrand du Guesclin."—A Benedictine of the same name published a martyrology of saints of his order.—*Gen. Biog. Dict.*

MENCKE (OTTO) professor of morals and licentiate in divinity at Leipsic, was born at Oldenburg in Westphalia, in 1644, and died in 1707. His works are thirty volumes of the "Acta Eruditorum" of Leipsic; an edition of Marham's Canon Chronicus; and an edition of Camden's Elizabeth.—*Moreri.*

MERCIER (LOUIS SEBASTIAN) a French writer, remarkable for the eccentricity of his sentiments. He was born at Paris in 1740, and at the age of twenty he published a volume of heroic epistles, after which he renounced poetry for criticism. In his "Essai sur l'Art Dramatique," he attacked the reputation of Corneille, Racine, and Voltaire, proposing to replace their works by his own productions; and as the comedians paid no attention to his diatribe, he published a virulent manifesto against them. In 1771 appeared, under the title of "L'An 2440," a declamatory tract, which was suppressed by authority. In 1781 was published, anonymously, the first volume of his "Tableau de Paris;" after which he removed to Switzerland, and at Neufchatel he printed ten more volumes of that work, which was favourably received, both in France and in other countries. Returning home at the beginning of the Revolution, he declared himself a friend to liberty, and in concert with Carra he published "Les Annales Politiques;" and "Chronique du Mois," journals which displayed both moderation and spirit. He became a member of the Convention, in which he voted for the detention, instead of the death of Louis XVI. In 1795 he passed into the Council of Five Hundred, and two years after obtained the office of comptroller of the chest of the lottery. He was subsequently nominated professor of history at the central school, and was a member of the Institute at its first formation. Mercier, who had the misfortune to outlive his popularity, died at Paris in 1814. Among his numerous works are "Mon Bonnet de Nuit," Neufchatel, 1783, 4 vols, 8vo; "De l'Impossibilité des Systèmes de Copernic et de Newton," 1806, 8vo; and "Satire contre Racine et Boileau," 1803.—*Erech France Littéraire. Biog. Univ. Class.*

MERIAN (JOHN BERNARD) a French writer of some eminence, who was perpetual secretary to the Royal Academy of Sciences at Berlin, where he died February 12, 1807, in

the eighty-fourth year of his age. He was a native of Leichthal, near Basil, and was invited from Holland to Berlin in 1750, on the recommendation of Maupertuis. The best known of his productions are a French translation of Claudian, and another of Hume's Essays enriched with commentaries, both which have been often reprinted, and the latter sometimes with refutations of the doctrines advocated by the English philosopher. The Memoirs of the Berlin Academy contains several papers of his composition on philosophical and mathematical subjects, one of the most distinguished of which is a parallel between the philosophy of Leibnitz and that of Kant, which attracted much notice at the time of its publication. This learned man, who was much esteemed in private life, preserved all the activity of youth to a very advanced age, and only a few days before his death he officiated in his place as secretary at a session of the academy, to celebrate, according to custom, the memory of Frederic the Great.—*Alkins's Athenæum.*

MERLIN (JOHN JOSEPH) an ingenious mechanic, who was a foreigner, but long resided in the British metropolis. He invented carriages moved by internal machinery, and many other curious pieces of mechanism; and he formed an exhibition called "Merlin's Cave," displaying an automaton conjuror, and other specimens of his skill in the peculiar branch of art which he cultivated. He died in London, in 1803.—*Lyons's Environs of London, Supp.*

METIUS (JAMES) a schoolmaster of Alkmaar, was a native of that place. In 1609 he presented the first telescope of his invention to the States General.—**ADRIAN METIUS**, his brother, taught mathematics at Franeker, and died in 1635. He wrote "Geometrices per Usum Cercini nova Praxis;" "Arithmetices et Geometrices Practica;" "Doctrina Sphæricæ;" "Astronomiæ Universæ Institutio;" "De Geminorum utriusque Globi."—*Dict. Hist.*

MICHAEL, archbishop of Smolensko in the fifteenth century, an eminent Russian historian. He wrote a history of Russia from 1254 to 1423, which is preserved in manuscript in the imperial library of St Petersburg.—*Zopf. Biog. Univ.*

MICHAUX (ANDREW) a distinguished naturalist of Charlestown, N. A., who published a "History of American Oaks;" and "Flora Boreali-Americana," 2 vols, 4to. He died in the island of Madagascar in 1803.—*Ibid.*

MICHEL (JEAN) a native of Angers in France, who was physician to Charles VIII, and is reckoned among the early French dramatists. His works, which are of a tragic character, are composed in the form of *Mysteries*.—*Ibid.*

MICHEL (PIETRO ANTONIO) a celebrated Florentine botanist, who died in 1347. He published "Nova Plantarum Genera," folio; and "Catalogus Plantarum Horti Cæsarei Florentini," folio.—*Ibid.*

MICHOVIUS (**MATTHEUS**) or Matthew of Miechaw, physician to Sigismund I, king of Poland. He is distinguished as one of the national historians, and his chronicle, which was published in 1521, is remarkable as being the first historical work which was printed in Poland, though typography had been introduced into that country as early as the year 1480.—*Rev. Encycl.*

MICRÆLIUS (**JOHN**) an eminent German divine, belonging to the reformed or Lutheran church, who was born in 1597, and died in 1658. He wrote in Latin, on controversial divinity and on history. One of his productions is entitled "Soliditas Orthodoxæ Lutheranæ in Quæstionibus de Salute Hominum," Stettin, 1665, from which his theological opinions may be collected; but his works of this description have fallen into oblivion. His "Syntagma Historiarum Mundi et Ecclesiæ," has been reprinted at Leipsic, 1679, 4to.—*Moreri.*

MILNER (**JOHN**) a learned divine, was born at Skircoat in Yorkshire, in 1628, and was educated at Christ's college, Cambridge. On the Restoration he obtained the curacy of Beeston, and in 1673 the vicarage of Leeds. He became prebendary of Ripon, but refusing to take the oaths at the Revolution, he quitted his livings, and returned to Cambridge, where he died in 1702. He wrote a "Defence of Archbishop Usher against Is. Vossius and Dr Cary;" "A View of the Dissertation of Dr Bentley on the Epistles of Phalaris;" "The Church History of Palestine;" "A Dissertation on the four last Kings of Judah;" "Conjectanea in Isaiam ix. 1, 2;" "De Nethinim, sive Nethinæis;" "A Discourse of Conscience;" "An Account of Mr Locke's Religion;" "Animadversions on Le Clerc's Reflections upon our Saviour and his Apostles," &c.—*Chalmers's Biog. Dict.*

MILNER (**JOHN**) a celebrated Catholic divine and writer on theology and ecclesiastical antiquities. His proper family name was Miller, and he was born in London in 1752. His education commenced at the schools of Sedgley-park, near Wolverhampton, and Edgbaston, near Birmingham; and he finished his studies at Douay. In 1777 he was ordained a priest, when he returned to London, and for some time resided at Gray's-inn. He quitted the metropolis in 1779, being appointed pastor to the Catholic chapel at Winchester, whither he had gone to administer spiritual aid to the French prisoners confined there, after two other clergymen who attended them had been cut off by a malignant fever which prevailed amongst them. He published in 1782 a funeral discourse for bishop Chaloner, which was his first production; and this was followed by "A Letter to the Author of a Book called 'A Candid and Impartial Sketch of the Life and Government of Pope Clement XIV,'" 1785, 8vo. Dr Milner's attachment to the study of ancient ecclesiastical architecture led him to an attentive observation of the remains of Catholic antiquity with which Winchester abounds; and the

learning and skill which he displayed procured for him the honour of admission into the Royal Society of Antiquaries, on the 8th of March 1790. He contributed many valuable communications to the *Archæologia*, and he displayed his zeal for the preservation of the relics of former ages by the publication of a "Dissertation on the modern Style of altering Cathedrals, as exemplified in the Cathedral of Salisbury," 1798. The same year he published his "History, Civil and Ecclesiastical, and Survey of the Antiquities of Winchester," 2 vols, 4to. In this work he advanced those ideas relative to a classical arrangement of the styles of Gothic architecture, which were subsequently developed in a "Treatise on the Ecclesiastical Architecture of England during the Middle Ages," 8vo. Some observations on the character of bishop Hoadly, and other subjects in the history of Winchester, gave offence to Dr Sturges, a prebendary of the cathedral, who animadverted on them in a tract entitled "Reflections on Popery." Dr Milner replied to this attack in his "Letters to a Prebendary," which it is impossible attentively to read without high admiration of the learning, ability, and acuteness of the author, who, whatever may be thought of the general questions at issue, has manifestly the advantage of his antagonist. Dr Milner was ever ready to repel the assaults of the enemies of the Roman Catholic faith, or to correct the errors of those among its friends whose eagerness to obtain the rights for which they contended endangered its safety and independence. Once, however, assenting to a premature measure of conciliation with statesmen, who, either artfully or erroneously, wrested his reliance on their policy into a consent on his part to the royal veto, to which he decidedly objected, he thenceforward, on this topic, displayed an impetuosity which rendered him impatient of the controul of those who equalled him in dignity, and excelled him in prudence. In 1801 he published his "Case of Conscience solved, or the Catholic Claims proved to be compatible with the Coronation Oath." On the death of bishop Stapleton, Dr Milner was appointed to succeed him as vicar apostolic in the midland district, with the title of bishop of Castabala. He for some time refused that dignity, but at length he was prevailed on to accept it, and was consecrated May 22, 1803. He took up his residence in the town of Wolverhampton, in September 1804, and continued there the remainder of his life. In 1807 and 1808 he visited Ireland, that he might be enabled, from personal observation and intercourse, to form an opinion concerning the charges brought against the Roman Catholics of that country. As the result of his researches he published his very interesting "Inquiry into certain vulgar Opinions concerning the Catholic Inhabitants and the Antiquities of Ireland." At this period he was appointed agent in England to the Irish Catholic hierarchy. His solicitude for the interests of religion in both countries induced him to take a journey to Rome in 1814; and he

remained there about twelve months, during which time he was frequently admitted to an audience by Pope Pius VII, who gave him a most honourable reception. In 1818 he published a treatise entitled "The End of Religious Controversy," consisting of a correspondence with some Protestant friends, and containing a systematic defence of those articles of the Catholic faith usually regarded as objectionable by Protestants. This was succeeded by his "Vindication of the End of Religious Controversy against the Exceptions of the Bishop of St David's and the Rev. Richard Grier;" and "A Parting Word to the Rev. R. Grier; with a brief Notice of Dr Samuel Parr's Posthumous Letter to Dr Milner." His death took place April 19, 1826; and he was interred in his chapel at Wolverhampton, on the 27th of the same month.—*Laity's Directory for 1827. Gent. Mag. Ann. Biog.*

MILLS (CHARLES) an ingenious historian, born at Greenwich in 1788. He was the youngest son of Samuel Gillam Mills, surgeon to the late queen Caroline, and being destined for the legal profession, he was articled to an attorney in London. Ill health, and the superior attractions of literature, prevented him from engaging in practice, and in 1817 he commenced his career as an author by a "History of Mohammedanism," which met with a favourable reception. He afterwards produced the "History of the Crusades," 1819; "Travels of Theodore Ducar, at the Revival of Letters and Arts in Italy," 1821; and the "History of Chivalry," 1825. He died October 9, 1826.—*Ann. Biog.*

MITFORD (JOHN) an ingenious but imprudent writer for the press, who is said to have been distantly related to the Redesdale family. He entered into the navy, where he attained the rank of lieutenant, and after having fought under Hood and Nelson, he retired on the conclusion of the war on half pay. But he not only lost his rank and emoluments but also his station in society, in consequence of some disgraceful forgery of letters, connected with the early investigation into the conduct of the late queen Caroline. In this affair, which became the subject of legal proceedings, he was connected with lady Perceval, who seems to have been the dupe of his deceptions. After this he depended for support on his literary talents, and particularly his facility in writing verse. He edited the "Scourge," and the "Bon Ton Magazines," two discreditable periodical publications, and other works of a similar kind; notwithstanding which, such was his versatility, that he sometimes obtained employment from religious publishers. His principal production, a poem illustrated with plates, is entitled "Johnny Newcome in the Navy," containing a description of sea life. This work was composed under circumstances of aggravated destitution perhaps unparalleled in the annals of authorship. Mitford was then a beggar, and Johnstone, the bookseller who published the poem, was afraid to trust him with money, knowing

that when he had cash in hand he would not work. Each morning he received a shilling, and a certain quantity of paper, which he engaged to fill with rhymes and deliver at night. His method was to supply himself with some gin and a portion of bread and cheese; thus provisioned he repaired to Bayswater fields, where he sat and wrote; it was dry weather, in the summer, and he took up his lodging in a gravel pit, near the water-works, where he made himself a bed of grass and nettles; the nettles that grew on each side he twisted so as to form a canopy above, and here he lay for forty three nights, having finished the poem in that number of days; and notwithstanding the exposure he never caught cold, nor did his health appear to suffer in any respect. He was the author of a popular song called "The King is a true British Sailor," and many other things of a similar kind. He died very characteristically, and a most melancholy example of the futility of talent without conduct, in St Giles's workhouse, London, in December 1831.—*Gent. Mag. New Month. Mag.*

MITFORD (JOHN FREEMAN) baron Redesdale of Redesdale, in the county of Northumberland. He was descended from an ancient family settled at Mitford in Northumberland, and he was born August 18th, 1748. He was educated at New college, Oxford, and having studied at Lincoln's-inn, he was called to the bar; and devoting himself to Chancery practice he soon attained high reputation. In 1782 he published "A Treatise of Pleadings in Suits in the Court of Chancery, by English Bill." He was afterwards made a Welsh Judge; in 1789 he was chosen member of parliament for Beeralston, and he spoke in the House with ability on several occasions, particularly during the trial of Mr Hastings. In 1793 he was appointed solicitor general, and in that capacity he assisted in conducting the state trials of Hardy, Horne Tooke, and Thelwall. He succeeded Sir John Scott (lord Eldon) as attorney general, in 1799; and in 1801, when he sat in parliament for the borough of East Looe, he was chosen speaker of the House of Commons, on the resignation of Mr Addington; but he did not long hold this office, for in February 1802 he was raised to the peerage, and made lord chancellor and a member of the privy council in Ireland. He resigned the seals in March 1806, in consequence of the death of Mr Pitt. Besides the works already mentioned, lord Redesdale was the author of "Observations occasioned by a Pamphlet entitled 'Objections to the Project of Creating a Vice Chancellor of England.'" He was always considered as a profound lawyer, and his judgment was highly appreciated in the House of Lords, especially in cases of appeal. He died at his seat at Batsford park, Gloucestershire, January 17th, 1830. He assumed the name and arms of Freeman in addition to those of Mitford, by royal sign manual in 1809, in consequence of receiving a large addition to his fortune, on the death of W. G. Freeman, Esq. Lord Redesdale, who was a fellow of the Royal

and Antiquarian Societies, was the younger brother of William Mitford, author of the *History of Greece*.—*Month. Mag.*

MITFORD (WILLIAM) an eminent historical and philological writer, born in London, February 10, 1734. He studied at Queen's college, Oxford, and then at the Middle Temple; but he early quitted the profession of the law, and obtained a commission in the Southamptonsire militia, of which he rose to be colonel. In 1785 he was chosen MP. for Newport in Cornwall, which borough he represented till 1790. He was returned for Beeralston in 1796, and after sitting in three parliaments for that place, he became member for New Romney from 1812 till 1818. His death took place at Exbury, near Southampton, February 10, 1827. He was professor of ancient history at the Royal Academy, and besides his principal work, "The History of Greece," 1784—1810, 4 vols, 4to, since reprinted in 8vo, he published "An Essay on the Harmony of Language, intended principally to illustrate that of the English Language," 1774, 8vo; "A Treatise on the Military Force, and particularly the Militia of this Kingdom," 8vo; "Observations on the History of Christianity," 8vo; a work on architecture; and another on the corn laws.—*Gent. Mag. Lit. Gaz.*

MOEBIUS (GEORGE) a Lutheran divine, was born at Laucha in 1616, and died in 1697 at Leipsic, where he was professor of theology. He was the author of a work on the Pagan Oracles against Vandale, 12mo.—*Morevi.*

MOINÉ (STEPHEN le) a Protestant divine, was born at Caen in Normandy in 1624. He was professor of theology at Leyden, where he died in 1689. His works are collected in two volumes, quarto, with the title of "Varia Sacra." They consist of dissertations on critical subjects.—*Ibid.*

MOLLER (DANIEL WILLIAM) professor of history and metaphysics, was born at Presburg, and became librarian in the university of Altorf. He wrote "Indiculus Philologorum ex Germania oriundorum," 4to; "Meditatio de Hungaricis quibusdam infectis Prodigiosis ex ære una cum nive in agro delapsis," 12mo; "Opuscula Medico-historico-philologica;" "Mensa Poetica;" "Opuscula Ethica et Problematico-critica," 12mo. He died in 1712, aged seventy.—*Ibid.*

MOLLER (JOHN) a German writer, born at Fleinsburg, in the duchy of Sleswick, in 1661, and died in 1725. He wrote "Cimbria Litterata," 3 vols, folio; "Introductio ad Historiam Ducatum Sleswicensis et Holstacii," 8vo; "De Cornutis et Hermaphroditis," 4to; "Isagoge ad Historiam Chersonesi Cimbricæ," 8vo.—*Ibid.*

MONROE (JAMES) president of the United States of America. He was descended from a gentleman of a respectable Scotch family who had held a commission in the army under Charles the First, and who emigrated to the new world in 1652. The father of the subject of this article was a farmer, who had an estate at Monroe's Creek, Westmoreland

County, Virginia, where the son was born in 1758. The circumstances of his family were not affluent, but he received a good education at the college of Williamsburg, in his native province. On the commencement of the disputes between England and America, Mr Monroe was chosen one of the earliest members of the Congress, but he soon relinquished his seat to enter into the army. He was with General Washington in his retreat through New Jersey, and was present in the attack on the Hessians at Trenton. At that period he served as a lieutenant in the company of Captain Washington, and on the fall of that officer he succeeded to the command. In the engagement last mentioned he was wounded while charging two pieces of British artillery. Subsequently he was attached to the staff of General Lord Stirling, with the rank of major, and he fought by the side of Lafayette, when that officer was wounded in the battle of Brandywine. He was afterwards promoted to the rank of colonel, but his military career was soon terminated by the conclusion of the war, and he returned to his original profession, that of a barrister. He was almost immediately again chosen as a delegate to the Congress, and his election to that body was annually repeated, nearly without an interval, during ten years. In 1794 Mr Monroe was appointed ambassador from the United States to the French republic, and on the 15th of August he was introduced in that character to the National Convention. His arrival in France occurred during a season of great difficulty and delicacy, and after two years residence in Paris he was accused by the administration under Washington of giving way too much to the overbearing policy of the French Directory, and he was recalled with strong marks of dissatisfaction at his conduct. Mr Monroe, on his return to America, demanded from the secretary of state a declaration in writing of the motives which occasioned his recall, and he subsequently published a statement of his own conduct compared with that of the government, together with the whole of his correspondence during his embassy. His defence seemed to give general satisfaction, especially in his own province, to the governorship of which he was in 1803 elected by a very numerous majority. He was next employed, in conjunction with Mr Livingstone, at Paris, to enter into a negotiation with France and Spain, for the cession of Louisiana to the United States, a mission which was most successfully terminated. He was afterwards sent as a negotiator to London; in 1811 he was appointed secretary of state; in 1814, on the capture of Washington by the English, he was made commander in chief of the American army, and he afterwards held the office of secretary of war till the conclusion of hostilities. He then returned to preside over the foreign department, where he remained till the 3rd of March 1817, when he was chosen, in the place of Mr Madison,

president of the United States. On the 3rd of December after his election he presented to the Congress a statement of the internal and external situation of the country, in which he congratulated the Americans on having reached the fiftieth year of political independence, and on the freedom of their institutions, and the strength of their government. After his retirement from his high station, he was associated with Mr Jefferson and Mr Madison in the foundation of the university of Virginia; and he was subsequently chosen a member of the convention for amending the constitution of his native state, and also elected to preside over that body. His death took place July 4th, 1831.—*Month. Mag.*

MONTAGU (GEORGE) a distinguished naturalist, who devoted himself particularly to the study of ornithology and conchology. This gentleman was descended from an ancient family long settled at Lackham, in the central part of Wiltshire, where he had an estate. In the latter period of his life he resided at Knowle, near Kingsbridge, in Devonshire, where he died in July 1815. His works are "An Ornithological Dictionary," Lond. 1802, 2 vols, 8vo, a supplement to which, with plates, was published in 1813, 1 vol. 8vo; "Testacea Britannica, or Natural History of British Shells," with plates, 1803, 2 vols, 4to; and a Supplement to the preceding, 1809, 4to.—*Britton's Beauties of Wiltshire*, vol. iii. *Biog. Dict. of Living Authors*.

MONTALVAN (DON LUIS PEREZ de) an eminent Spanish dramatist in the reign of Philip IV. He was distinguished for his literary attainments, being well versed in the classics; and from the gravity of his character, his good taste, and sound judgment, he was held in the highest estimation by the literati of his times. He produced many plays, among which the most remarkable are "No hay contra un Padre Razon;" and "La Lindona de Galicia." The language of this writer is correct, full, and elegant, his versification smooth although somewhat laboured; and it is apparent that he engaged in writing more as a task than as an amusement. He died in 1639.—*Metropolitan*.

MONTGAILLARD (GUILL. HONORE-ROQUES de) a French historian, born in Langueoc in 1772. He studied at the military school at Paris, but being disabled by a fall from a horse, he became an ecclesiastic. At the Revolution he emigrated to England, and afterwards went to Germany. In 1799 he returned home, and was employed in the military administration under the government of Buonaparte. He died in 1825. Among his works are "Revue Chronologique de l'Histoire de France depuis la première Convocation des Notables jusqu'au Départ des Troupes Etrangères," Paris, 1820, 8vo; and "Histoire de France depuis la Fin du Règne de Louis XVI, jusqu'à l'Année 1825," 9 vols, 8vo.—*Biog. Univ. Class.*

MONTI (VINCENTO) one of the most cele-

brated poets of modern Italy, who was born at Fusinano, near Ferrara, in 1753. He studied at the university of the latter city, under the poet Onufrio Minzoni, and distinguished himself by his poetical productions. Prompted by his aspiring genius he went to Rome, where he obtained an introduction to one of the nephews of Pope Pius VI, by whom he was retained as secretary, and he was admitted into the Arcadian Society, but he was quickly involved in disputes with many of its most illustrious members, who complained of the freedom of his satires and epigrams. He soon abandoned this unprofitable species of composition, and emulating the fame of Alfieri, he produced his two celebrated tragedies of "Galeotti Manfredi," and "Aristodemo." The assassination of Hugo Bassville, the French ambassador at Rome, was the subject of his next tragedy, and it is said to have been suggested to him by the Papal Court. The subsequent political changes that took place in Italy produced an alteration in the destiny of the poet, though he seems to have been long before favourably disposed towards the views of the French republicans. Like most of the Italian patriots of the time he repaired to Milan, the seat of government of the newly founded state; and he employed his talents in support of the cause he had adopted. His enthusiasm exposed him to censure on account of the composition of an ode, in which he defended the execution of Louis XVI. As he had not taken holy orders before the Revolution, he was too much a man of the world to do so afterwards. He then married a lady distinguished for her beauty and talents, who was the daughter of the celebrated gem-engraver Pikler. When Buonaparte founded the Cisalpine Republic, Monti was appointed secretary to the executive directory of the state, which situation he filled with honour during the short existence of that republic. On the invasion of Italy by Suwarow, he retired to Paris, whence he returned after the battle of Marengo, in 1800, and shortly after published his celebrated poem on the death of the mathematician Mascheroni. He was successively appointed professor of the Belles Lettres, and of rhetoric, in the university of Padua, and after the creation of the kingdom of Italy, in 1805, he was constituted historiographer of that state. One of his principal productions was a translation of the Iliad of Homer, which was severely criticised, especially by Foscolo, who commenced a rival version, but that of Monti, notwithstanding the poet's avowed ignorance of the Greek language, is regarded as the best among the Italian translations. After the destruction of the kingdom of Italy, he was fortunate enough to preserve his place and pension under the new government, and he lived at Milan esteemed and cherished by his fellow citizens, and respected by strangers. In the latter part of his life he commenced a philological work entitled "Proposals for some Corrections and Additions to the Vocabulary

of the *Accademia della Crusca*," which occasioned a contest between the Tuscan and Lombard critics. He was a knight of the Legion of Honour, and of the Iron Crown, and a member of many learned societies. His death took place in October 1823.—*For. Rev.*

MONTLUC (BLAISE de) a famous commander, was born near Condom in 1500, of a noble family. He served in the wars of Italy, and took Boulogne from the English. In 1554 he was made governor of Sienna, which he defended with the greatest bravery, but was at length obliged to give up on honourable terms. He then took part against the French Protestants, and distinguished himself by his excessive cruelty. He died in 1577, and his memoirs were published at Bourdeaux in 1592, folio.—*Moreri.*

MONTMORENCY (MATTHEW de) constable of France, died in 1230. He distinguished himself in the crusade against the Albigenses, and served in the wars against the English, from whom he took several forts.—**ANNE DE MONTMORENCY**, his descendant, and a famous general, was taken prisoner at the battle of Pavia with Francis I. In 1538 he was appointed constable of France. He was sent by Charles IX against the Protestants, but was taken prisoner by them at the battle of Dreux in 1562. He recovered his liberty, and was killed at the battle of St Denis in 1567.—The duke de MONTMORENCY, his grandson, conspiring with Gaston of Orleans, and raising an insurrection in Languedoc, was beheaded in 1632.—*Ibid.*

MONTROSE (JAMES GRAHAM, marquis of) a distinguished royalist under Charles I, descended from the royal family of Scotland. He entered the Scotch guards in France. On his return he excited the jealousy of the marquis of Hamilton, in consequence of which he met with such neglect that he joined the covenanters; but afterwards returning to the royal side, he was zealous in his service of the king, and gained the battles of Perth, Aberdeen, and Inverlochy, in recompense for which he was created a marquis. In 1645, being defeated by Lesley, he left the kingdom, and remained abroad until 1650, when he came to Orkney with a few followers, but being taken, he was conveyed to Edinburgh, where he was hanged and quartered on the 21st of May, 1650.—*Life by Wishart.*

MONTUCCI (ANTONIO) a distinguished philological writer, who was born at Sienna, in Italy, May 22, 1762. He studied jurisprudence in the university of his native place, and obtained the degree of doctor of law; but he chiefly devoted himself to the acquisition of the living languages. In 1785 he was appointed professor of English in the Tolomei College; and the following year he went to Florence with some English gentlemen, to whom he was giving instruction in the modern tongues. He there formed an acquaintance with Josiah Wedgwood, who invited him to settle as an Italian teacher at his establishment at Etruria in Staffordshire.

Being in London in 1792, when preparations were making for lord Macartney's embassy to China, Montucci took the opportunity for obtaining assistance from some Chinese youths attached to the embassy, in acquiring their language, which he had previously studied by means of Fourmont's works. He remained in England till 1804, continuing his Chinese studies, and he projected the composition of a new Chinese dictionary. In 1806 he went to Berlin on the invitation of the king of Prussia, to whom he had transmitted a prospectus of his intended work. The invasion of the country by Buonaparte interrupted his plans, and for some time he employed himself in giving lessons in English and Italian. At length, on the restoration of tranquillity, he resumed his undertaking, but it does not appear that he ever completed it. He died at Sienna in 1829. Besides an Italian translation of the Common Prayer, and other works for the use of his pupils, Dr Montucci published "The Inedited Poetical Writings of Lorenzo de Medici, from the Laurentian Library," 1790; "Urh-chih-tszeteen, &c. or a Comparative Examination of the two Chinese Dictionaries undertaken by the Rev. R. Morrison and Antonio Montucci," Lond. 1817, 4to.—*Biog. des Hommes Vivants. Edit.*

MOORE (JOHN) a liberal prelate, was the son of a butcher at Gloucester. He was educated in the Crypt school there, whence he went to Pembroke college, Oxford. He was tutor to the marquis of Blandford, and chaplain to the duke of Marlborough. In 1771 he was created dean of Canterbury, five years after bishop of Bangor, and finally, in 1783, archbishop of Canterbury. He died in 1800.—*Gent. Mag.*

MORATIN (NICOLAS FERNANDEZ de) a celebrated Spanish dramatic poet, who was born at Madrid in 1737. He received the first rudiments of his education at the royal residence of San Ildefonso, whither the widow of Philip V had retired, retaining in her service, as master of her wardrobe and jewels, the elder Moratin. The son afterwards studied philosophy under the jesuits of Calatayud, then took a degree in law, at Valladolid; and returning to San Ildefonso, he married, with the approbation of the queen, who bestowed on him the employment which had been held by his father. When the queen left her retreat to take charge of the government till her son arrived in Spain from Naples, Moratin accompanied her to Madrid, where he became acquainted with the most celebrated artists and men of letters, whose example incited him to become an author. The drama was in a declining state when he composed his comedy of the "Pati-metra," and his tragedy of "Lucrecia," which may be ranked among the first attempts to reform the Spanish theatre. He also cultivated with success lyric poetry, and his productions of this kind are even more admirable than his plays. He was honoured with the friendship and protection of the most

learned persons at the court of Spain, both natives and foreigners; he was admitted a member of the Arcadian Society of Rome, and many learned Italians testified for him their admiration and esteem. He now collected together some pieces of fugitive poetry, and published them in the form of a journal, entitled "El Poeta," and soon afterwards appeared his "Diana, or the Art of Hunting," a didactic poem, addressed to the infante Don Luis. He was well acquainted with the old Castilian chroniclers, as particularly appears from his poems entitled "Amor y Honor," "Don Sancho en Zamora," "Abdalcadir y Galiana," "Consuelo de una Ausencia," "Fiestas de Tores en Madrid," and "La Empresa de Micer Jaques Borgouon." He published an "Historical Letter on the Origin and Progress of Bull-fights in Spain," in which he proves that amusement not to have been derived from the Romans, but to be peculiar to the Spanish nation. In 1766 political difficulties interrupted the progress of his literary career, and the changes which took place were not advantageous to his fortune. Finding it necessary to adopt some plan for the support of his family, he resumed the profession of the law, and in 1772 he was admitted as an advocate, in the legal corporation of Madrid. His extraordinary facility of composition was displayed in an extempore comedy, in commemoration of the defence of Melilla, in 1775, written at the request of the Duke de Medina Sidonia, being dictated to an amanuensis, in the space of six hours. His facility as a writer of poetry also appeared in his contest with the Italian poet Talassi, (who was considered unrivalled as an improvisatore,) in which Moratin fully sustained his reputation. He next wrote a memoir on the means of encouraging agriculture in Spain without injuring the breed of cattle, on account of which performance he was chosen a member of the Economic Society of Madrid. He was likewise invited to solicit a seat in the Royal Academy, but he declined the honour. The latter part of his life was chiefly devoted to the classification and last polish of his productions. He died in 1780.—MORATIN (LEANDRO FERNANDEZ de) the son of the preceding, and more distinguished, especially as a dramatic poet, than his father. He was born at Madrid, and received his earliest instructions at home. A year before the death of his father, he became competitor for the prize proposed by the Spanish Academy for the best poem on the capture of Grenada by Ferdinand and Isabella. Though this piece, written under the assumed name of D. Efen de Laduar y Morante, did not obtain the prize, yet it was thought worthy of being printed at the expense of the academy. Deprived of the literary aid of his father, who wished to dissuade him from pursuits so unprofitable in a pecuniary point of view, he cultivated the friendship of the learned Conti, a man of exquisite taste and classical attainments. In 1782 he presented to the academy his "Lec-

cion Poetica," again contending for the prize, under the appellation of D. Meliton Fernandez, and on this occasion he gained the academy's *accessit*. This tract is a satire against the defects of Castilian poetry, and is said to be superior to any previous production on the subject. The dramatic essays of Moratin are also among his youthful compositions, that entitled "El Viejo y la Nina" having been written about 1787. He shortly afterwards produced his celebrated comedy "El Cafe," which obtained him general praise for the boldness and fidelity with which the characters are drawn, the keenness of his satire, and the elegance of his style. The young poet, in consequence of the talents he had displayed, obtained the patronage of the minister Godoy, to whom he afterwards dedicated his comedy "El Baron," the first play which appeared under his own name, his former works bearing his academical appellation, Inarco Celenio. He also received permission to travel at the royal expense, and he was thus enabled to visit the principal theatres of England, France, and Italy; upon his return home a considerable pension was bestowed on him, and he received the appointment of principal secretary interpreter, which he filled to the general satisfaction. He remained at Madrid during the reign of Joseph Buonaparte, under whose government he was made royal librarian; but after the famous battle of Baylen he withdrew to the Ebro, and in 1813 to Valencia. From this city he was compelled by general Elio to retire to Barcelona, where he remained, taking occasional journeys to France, till the year 1821, when, after publishing an excellent edition of the works of his father, he removed to Bordeaux, and subsequently to Paris, where he died June 21, 1828. Besides the plays already mentioned, Moratin was the author of "La Mojigata," and "El si de las Ninas;" and two translations from Moliere, "La Escuela de los Maridos," and "El Medico a Palos." Moliere was always his model, although he showed himself by no means unacquainted with the dramatic literature of other countries. One of his earliest attempts was a translation of Shakspeare's Hamlet, with critical notes, and a life of the great author; and it appears to have been his design to translate the whole of his works into Spanish. At the time of his death he was engaged in writing the history of the Spanish drama, from the earliest period; and he also left other works in manuscript. The "Leccion Poetica," before mentioned, is completed by the author's letter to Andres, in which he criticises his poetical contemporaries. He also wrote other satirical poems, of which it may be affirmed that they are worthy of the reputation he acquired as a dramatist. A valuable edition of his poetical and dramatic works was published under his own inspection during his residence at Paris.—*For. Rev.*

MÖRGAN, FRAS. (WILLIAM) a distinguished mathematician, who was a native of Glamorganshire, in Wales, and was the

nephew of Dr Richard Price of Hackney, by whom he was educated. His father was a surgeon, and the son was designed for the medical profession; but his uncle perceiving his strong inclination for the study of the mathematical sciences, persuaded him to relinquish his original purpose, and devote himself to the cultivation of those branches of knowledge for which his talents were best adapted. With a view to this object Dr Price procured for him the office of actuary to the Equitable Assurance Society, whose office is in Bridge-street, Blackfriars, London. He had the satisfaction of witnessing the increasing prosperity of that institution, with which he remained connected during the long period of more than fifty-six years. He died in May 1833, and was interred on the 12th of that month at Hornsey, where he had for some time resided. He published "The Doctrine of Annuities and Assurances of Lives," 1799, 8vo; "A Review of Dr Crawford's Theory of Heat," 1781, 8vo; "A Review of the Writings of Dr Price on the subject of the Finances of this Kingdom," 1792, 8vo; "Facts addressed to the serious attention of the People of Great Britain respecting the Expense of the War, and the State of the National Debt," 1796, 8vo; "Additional Facts on the same Subject," 8vo; "An Appeal to the People of Great Britain on the present alarming State of the Public Finances and Public Credit," 1797, 8vo; "A Comparative View of the Public Finances, from the beginning to the close of the late Administration," 1801, republished with a Supplement, in 1803; and "Observations on Reversionary Payments, by Dr Price, newly arranged and enlarged," 2 vols, 8vo. Mr Morgan also published papers in the Philosophical Transactions, and in the Monthly Magazine, and other periodical works.—*Biog. Dict. of Living Authors. Times Newsp.*

MORETO Y CABANA (DON AGUSTIN) a Spanish dramatist, whose talents as a comic writer gave him a just claim to the title of the Spanish Moliere. He lived in the reign of Philip IV, and was the particular friend of Rioja, in concert with whom some of his pieces were written. He possessed the freely flowing, dashing humour of Farquhar, combined with the sterling and prodigal wit of Congreve. The plots of his dramas are ingenious, and full of striking situations, but it is in the rich humour of the dialogue, the brilliant sallies, and characteristic language of the *dramatis personæ* that their chief merit consists. Moreto possessed an astonishing facility of composition, and it appears that his comedies were produced in moments of mercurial excitement, and whilst his friends were engaged in gay conversation and drinking wine around him. He was quite a man of fashion and pleasure, lounging from one coffee-house to another, frequenting the court, the theatres, the Prado, ardent in the pursuit of pleasure and excitement, and yet he produced more than two hundred plays, some of which have been reckoned the very best in

the language, and one "El Desden con el Desden," is considered the standard comedy of the Spanish stage. An adaptation of this drama was produced, with success, at Covent Garden theatre some time back, under the title of "Love's Victory," written by Mr Hyde. Although Moreto cannot lay claim to the sublimity, inventive power, elegance of style, and correctness of language which distinguished the works of Lope de Vega and Calderon, he is superior to them in the delineation of character, a keen perception of the ridiculous, and a rich fund of humour. The former were the greater poets, Moreto much the better dramatist. Among the vast quantity of this writer's productions there are many, such as "La Tia y la Sobrina"—The Aunt and the Niece; "El Parecido en la Corte"—The Stranger at Court, and others, which are often acted on the Spanish stage, and always with unabated success.—*Metro-politan.*

MORLEY (THOMAS) an eminent English musician in the reign of Queen Elizabeth. He was a pupil of William Bird, and became a bachelor of music, and one of the gentlemen of the Chapel Royal. He was distinguished both as a performer and a composer; and among his works are canzonets, madrigals, and ballets, which were published towards the close of the sixteenth century; and he also wrote church music, but it does not appear to have been printed during the life of the author; some of his compositions, however, are to be found in the collections of Dr Tudway and Dr Boyce. He is chiefly celebrated as the author of a treatise entitled "A plaine and easie Introduction to Practical Musicke." His death is supposed to have taken place about 1604.—*Burney. Biog. Dict. of Mus.*

MORRICE or MAURICE (PETER) a Dutch mechanic and engineer, in the sixteenth century. He invented machinery for raising water worked by the tide, which was erected, in 1582, on the north side of London Bridge, for the purpose of supplying with water the inhabitants of the city. These water works, as well as others at the south end of London Bridge, were removed in 1823, to make way for the erection of the new bridge recently completed.—*Maitland's Hist. of London.*

MORRIS (LEWIS) a Welsh antiquary, was born in the isle of Anglesey in 1702. He received an order from the board of admiralty to make a survey of the Welsh coast. He died in 1765, leaving above eighty volumes of manuscripts to the Welsh charity school in Gray's-inn-lane. His poems have been printed, and are not devoid of merit.—He had a brother, RICHARD MORRIS, who superintended the printing of the Welsh Bible. He died in 1779.—*Owen's Cambrian Biog.*

MORTON (NATHANIEL) an early Anglo-American historian, who held the office of secretary of the jurisdiction of New Plymouth, N. A. in the seventeenth century. He was the author of "New England's Me-

moiral," containing an authentic account of the settlement of that colony. This valuable memoir, first published in 1669, was reprinted in 1721, with a supplement, by Josiah Cotton of New Plymouth, and in 1826 appeared a fifth edition, with notes, an appendix, and a lithographic copy of an ancient map of the country, under the superintendence of John Davis, member of the American Society of Arts and Sciences, and of the Historical Society of Massachusetts.—*Rev. Encycl.*

MOSELY (WALTER MICHAEL) an ingenious writer, born in 1765, at Glasshampton, in the county of Worcester. He was educated at the university of Edinburgh, which he quitted in 1789, and being possessed of a handsome estate, he devoted his time to the cultivation of literature and science. He published, in 1792, a work of considerable research, entitled "An Essay on Archery," 8vo; and he was a contributor to Sowerby's English Botany, Britton's Architectural Antiquities of Great Britain, &c. His death took place July 16, 1827.—*Gent. Mag.*

MOSEY (GEORGE MICHAEL) an artist, was born at Schaffhausen, in Switzerland, in 1706. He came to England, where he carried on the business of chaser in gold and enameller. In 1768 he was appointed keeper of the Royal Academy. He died in 1783.—His daughter, a member of the academy, is distinguished by her skill in flower-painting.—*Aikin's Biog. Diet.*

MUNDEN (JOSEPH SAUNDERS) an eminent comic actor, who was born in London, in 1758. His original destination was to the medical profession, but disliking it, he was apprenticed to a writing stationer. At his first connexion with the stage, he was employed in the humble office of writing out the parts for the performers, occasionally exhibiting as a silent character. He at length joined a company of strolling players at Rochdale, in Lancashire, and after continuing some time an itinerant life, he returned to his friends in London. His predilection for the theatre being unabated, he obtained an engagement at Canterbury, in 1780, and there first distinguished himself in low comedy. After performing during several years at various places in the country, he made his debut at Covent Garden theatre, in December, 1790, in the characters of Sir Francis Gripe, in the *Busy Body*, and that of *Jemmy Jumps*, in the *Farmer*; in which last he succeeded the celebrated Edwin, notwithstanding which he was eminently successful. In 1813 he was engaged at Drury Lane theatre, to which he remained attached till his final retreat from the stage, May 31, 1824. He died at his house in Bernard-street, Russell-square, February 6, 1832. He was an admirable comic actor, and in some characters unrivalled, especially in that of Old Dornton, in the *Road to Ruin*. In private life he was much esteemed by an extensive circle of acquaintances, not only on account of his convivial

qualities, but also for others of a more substantial kind.—*Thesp. Dict. Metropolitan.*

MUNRO (SIR THOMAS) a distinguished military officer, who was born at Glasgow, 1761; and received his education in the grammar school and college of his native city. His father, who was a merchant, intended him for his own profession, but failing in business, he sent his son to India, where he arrived about the period of the commencement of the war with Hyder Ally; and young Munro, immediately joining the army, was engaged in active service till the peace of 1784. He then remained unemployed till 1788, when he obtained an appointment in the Intelligence Department. Two years afterwards on the invasion of Travancore by Tippoo Saheb, he resumed his military duties, in which he was occupied till the termination of hostilities in 1792, when he joined his countryman, colonel Read, in the Baramahl, a newly ceded territory, as his assistant in surveying and portioning out the country. In this service he displayed considerable skill and great diligence, and he continued thus employed till the last war with Tippoo, in 1799, when he was ordered to Seringapatam, where he did not arrive till after the city was taken; but he was subsequently appointed one of the secretaries to the commission for arranging the partition treaty. The labours of the commissioners being completed, he was directed to proceed to Canara, on the western coast, to settle the affairs of that province, which task was also successfully accomplished. He then solicited, and at length obtained, a similar appointment in the countries newly ceded by the Nizam, as an indemnity for the pay of the troops furnished by the East India Company. This office, which invested him with almost regal power, he held till 1807, when, after twenty-seven years service, in India, he resigned his employment, and returned to England. Not choosing, however, to lead a life of inactivity, he went as a volunteer on the expedition to Walcheren. In 1811 he attended a committee of the House of Commons, and gave evidence on the state of India. Soon afterwards, the judicial system of India seeming to call for inquiry, colonel Munro was placed at the head of a commission sent out for that purpose. In this investigation he was actively engaged till the Pindarree war broke out in 1817, when he solicited and obtained professional employment. At the close of 1818 he a second time resigned his appointments, in order finally to return to his native country. He had scarcely landed when a vacancy occurred in the government of Madras, and Sir Thomas Munro, who had been raised to the rank of major-general, was appointed to the office. As governor of that presidency he was detained longer than he expected, by the delay in the conclusion of the Burmese war, in the conduct of which his advice had been frequently requisite. The time for his return was at length fixed, when he fell a sacrifice to the cholera morbus, in 1826. The life of major-general Sir T. Munro

MUR

was published in 1830, 2 vols, 8vo, by the Rev. G. R. Gleig, with his correspondence and papers on Indian affairs, including a number of letters from general Wellesley, now duke of Wellington, and other military officers.—*Month. Mag.*

MUNSTER (SEBASTIAN) a German divine, was born at Ingelheim, in 1489, and was educated at Heidelberg. He entered the order of the Cordeliers, but quitted them to adopt the principles of Luther. He succeeded Pelicanus in the Hebrew professorship at Basil. He published a "Universal Cosmography," folio; a "Treatise on Dialling;" a Latin translation of Josephus; and a Latin version of the Bible, with notes, and several mathematical works.—*Moreri.*

MURRAY (JAMES) a partizan officer of considerable talent, in the service of the East India Company. He was a native of the state of Rhode Island, in North America, and his real name is said to have been Lillibridge, which he exchanged for some unknown reason for that by which he was commonly known. At an early age he left his relations, in consequence of some ill treatment he had received from one of them, and went to sea. After a number of voyages, he arrived at Tranquebar, on the coast of Coromandel, about 1790, when he determined to repair to the interior of India, and enter into the service of one of the native chiefs, who at that period were disposed to give every encouragement to officers acquainted with European tactics. This project he accomplished, though not without some hazard and difficulty in passing the British posts. In the service of the Mahrattas he soon became noted for his bravery and military skill, and he continued thus employed nearly fifteen years, traversing the country from Cape Comorin to the frontiers of Persia. While acting under Holkar, the famous Mahratta chief, Murray became first known to his British opponents, by saving, at the most imminent risk of his own destruction, the lives of some English officers, who having fallen into the power of Holkar, were ordered by him to be put to the sword. Shortly after this affair he quitted the service of the Mahratta prince, and raised a body of cavalry by his own authority, with the assistance of which he at length obtained possession of a considerable district. In the progress of his bold undertaking, he was exposed to great vicissitudes of fortune, being at one time at the head of only seven or eight men, not more than half armed. When the war broke out between the British government and Scindia, in which Holkar assisted the latter, Murray proclaimed the authority of the former in that part of the country where he then was, and joined the British general, lord Lake, with about seven thousand horse. The marquis of Wellesley, at that period, had issued a proclamation recalling all British subjects from the service of the native princes, but this order could not extend to Murray, as being an American. He was treated by the British

MUS

commander with great consideration, and was employed in many dangerous and important services, still retaining the command of the cavalry which he had brought with him. At the siege of Bhurtpore, where the British army lost nearly ten thousand men, in four attempts to take the fort by storm, he was in continual action, and attained the character of being the best partizan officer in the army. At the conclusion of the war, when he had accumulated a handsome fortune, he resolved to return to his native country, and having remitted his property to Calcutta, he repaired thither himself. The services he had rendered to the British government were very considerable, and he was hardly satisfied with the reward which he received, being made a major, with permission to return home on half-pay. He was just about to embark for America, when an accidental injury, in consequence of a fall from his horse, occasioned his death in the spring of 1807.—*Aikin's Athenæum.*

MUSA (ANTONIUS) flourished about 21 BC. and was physician to the emperor Augustus. He was the first who recommended the use of the cold bath. A tract entitled "Libellus de Botanica" was published with his name, but it seems doubtful whether he had any thing to do with the work thus attributed to him.—*Eloy Dict. Hist.*

MUSHET (ROBERT) a most ingenious and active officer, belonging to the royal mint, whose death took place in the early part of the year 1828. He displayed great ability in his statements, reasonings, and suggestions, respecting the currency and mint regulations contained in the report of his evidence before the committee of parliament, relative to cash payments, in 1819. Though laboriously engaged in the new coinage, for eight or ten years previous to his death, he found leisure to prepare and publish several useful tracts on subjects connected with the currency and the national debt. The last of these was an investigation of the causes of the panic in 1825, which, from a long and careful deduction of facts, he was led to ascribe entirely to the superabundant issue of Bank of England and country bank notes, the joint effect of which not only heightened the prices of commodities in general, but also greatly influenced the value of public securities, constituting an element of derangement which had hitherto been nearly overlooked or not sufficiently regarded. Mr Mushet was a contributor of some important articles for the *Encyclopædia Britannica*.—*Orig.*

MUSS (CHARLES) an ingenious painter in enamel, who died in 1824, at the age of forty-three. Among his most celebrated works is a Holy Family after Parmegiano, said to be the largest piece of enamel ever painted. Mr Martin, who had been the pupil of this artist, superintended the execution of various works in painted glass, which Mr Muss had been commissioned to execute, for the benefit of his widow.—*Lit. Gaz.*

NARES (ROBERT) a learned writer on theology, philology, and criticism. He was the son of Dr James Nares, an eminent musical composer, and first cousin of the Rev. Edward Nares, professor of history in the university of Oxford. He was educated at Westminster school, and Christchurch college, Oxford, where he proceeded master of arts, in 1778. After entering into holy orders he was presented to the rectory of Sharnford, in Leicestershire; he was chosen preacher at Lincoln's-inn; and he also obtained the office of assistant librarian at the British Museum. In 1799 he was made archdeacon of Stafford, when he resigned his first preferment. He was also a prebendary of Lincoln, and for some time rector of St Mary's, Reading, at which place he resided. At the time of his death, which happened March 23d, 1829, he was archdeacon of Stafford, canon of Lichfield, and rector of All Hallows, London. His principal productions are "An Essay on the Demon, or Divination of Socrates," 1782, 8vo; "Elements of Orthoepey, containing a distinct view of the whole Analogy of the English Language," 1784, 8vo; "A Connected Chronological View of the Prophecies relating to the Christian Church, in Twelve Sermons preached at the Warburton Lecture," 1805; and "A Glossary, or Collection of Words, Phrases, Names, &c. in the works of English Authors of the age of Queen Elizabeth," London, 1822, 4to. Many years since Dr Nares, in conjunction with Mr Beloe, established and conducted the "British Critic," a high church literary review; and he was also a contributor to the Classical Journal.—*Month. Mag.*

NARUSZEWICZ (ADAM) a distinguished poet and historian, who was a native of Poland. From his having made an excellent translation of the works of the great Roman historian he obtained the appellation of the Polish Tacitus; but his fame chiefly rests on his elaborate work on the annals of his country. His History of Poland commences with the introduction of Christianity by king Micislaus I, in 965, and is continued to the first dynasty of the Piasts in 1386. Purposing to treat subsequently of the anterior period, he began by the publication of the second volume of his history in 1780, and between that year and 1786 appeared the third, fourth, fifth, sixth, and seventh volumes. A second edition of this portion of the Polish History was printed at Warsaw, in 1803, at the expense of count Thaddeus Mostowski, an eminent publicist and man of letters, who was then minister of the interior; but no writer felt equal to the task of finishing this grand national work, which the author had left imperfect at his death in 1794. At length a plan was laid for the execution of this undertaking under the patronage of the Royal Society of the Friends of Science at Warsaw, and two publications,—the Reign of Sigismund III, by J. U. Niem-

cewicz, 1819, 3 vols, 8vo; and that of Ladislaus IV, by C. Kwiatkowski, 1823, one vol. 8vo, have consequently appeared. Through the efforts of the same society was published, thirty years after the death of Naruszewicz, the preliminary volume of the history, for which he had collected the materials: it is entitled "Historia narodu Polskiego przedrokiem 965"—History of the Polish Nation before the Introduction of the Christian Religion, two parts, Warsaw, 1824, 8vo, with maps.—*Rev. Encycl.*

NARY (Dr CORNELIUS) a Roman Catholic divine, was born in 1660, in the county of Kildare, and died in 1738. His works are "A History of the World," folio; and "The New Testament translated from the Vulgate, with Notes," 8vo.—*Harri's Edition of Ware.*

NASMETH (PETER) an ingenious landscape painter, who was a native of Edinburgh, and the son of an artist cultivating the same branch of the profession. When very young he devoted himself to the study of nature, and the delineation of rural scenery; and at the age of twenty he removed to London, where his talents soon attracted notice, and procured him the appellation of the English Hobbima. That painter and Ruysdael seem to have been his favourite masters, but without being a copyist of their manner, he may be said to have infused their spirit into his works. He acquired great reputation, his pictures have been sought after by the most distinguished amateurs of the day, and there is scarcely a collection of importance in England but what contains some of his works. He died at South Lambeth, near London, August 17th, 1831, in the forty-sixth year of his age.—*Ann. Biog.*

NAUDET (THOMAS CHARLES) a French landscape painter, born at Paris in 1774. His death took place July 10, 1810, and he left a collection of near three thousand designs, comprehending the most beautiful views, and the finest monuments of ancient and modern times, in Italy, Spain, Germany, and Switzerland. They have since his death been published, 1812, with a descriptive text by M. Neergard, a learned Danish naturalist.—*Biog. Univ. Class.*

NAUMAN (JOHN GOTTLÖB) master of the electoral chapel at Dresden, and one of the most distinguished musical composers in Germany. He was born in 1741, of very poor parents, at a small village near Dresden, and was taken to Italy by a Swedish amateur, who discovered his talents for music, and wished to encourage them. After seven years' study under Tartini, at Padua, under Martini, at Bologna, and also at Naples, he returned to Germany, and was appointed composer of sacred music, and afterwards chapel master to the elector of Saxony. He subsequently made two journeys to Italy, where he composed several operas, which were performed with distinguished success at the theatres of that country. Notwithstanding brilliant and

flattering offers of employment from different northern princes, he gave the preference to his own country, where he spent every summer at his native village, on the banks of the Elbe. For some time before his death he devoted himself almost entirely to the composition of sacred music, some very valuable pieces of which are preserved in the archives of the chapel of Dresden. His death, which was occasioned by apoplexy, took place in 1801. Among the operas which he composed may be mentioned "La Clemenza di Tito;" "L'Isola Disabitata," "Armida," "Amphion," "Gustavus Vasa," "Orpheus," and "Aci e Galatea." His other works include oratorios, symphonies, duets, sonatas, songs, ariettes, &c.—*Biog. Dict. of Mus.*

NEELE (HENRY) an ingenious poet and novel writer, who died by his own hand, February 9, 1828, in a fit of insanity, supposed to have originated from too intense application to study. He was the son of an engraver, and was educated for the profession of a solicitor, which he practised with reputation in the metropolis till his death. He was a man of amiable disposition, and inoffensive manners, and highly respected by his acquaintance. Among his publications are "Poems;" "Dramatic Scenes;" and "The Romance of History," 3 vols, 12mo, a series of tales relating to persons and events mentioned in the annals of our native country. As a poet Mr Neele seems to have formed himself on the model of Collins, and several of his odes possess great power of picturesque personification, and otherwise display considerable mastery and spirit.—*Lit. Chron. Ed.*

NEMESIANUS (AURELIUS OLYMPIUS) a Latin poet, was a native of Carthage, and flourished about AD. 281. He wrote a poem entitled "Cynegeticon," and four eclogues published by Paul Manutius in 1538. Another poet of the same name wrote a poem entitled "Ixentica."—*Moreri.*

NEWLAND (JOHN) abbot of the monastery of St Augustine at Bristol in the fifteenth century. He seems to have been a man of learning and abilities, and was frequently employed in a diplomatic character by king Henry VIII. Of his literary talents he has left a specimen in his history of the monastery over which he presided, in which are included memoirs of the baronial family of Berkeley, by one of whom the establishment was founded. Newland became abbot of Bristol in 1481, and died in 1515.—*Barrett's History of Bristol. Wood's Athen. Oxon.*

NEWTON (RICHARD) an eminent divine, was born in 1676, in Buckinghamshire, and was educated at Westminster school. He then went to Christchurch, Oxford, and in 1710 he became principal of Hart-hall, when he took his doctor's degree. In 1752 he obtained a canonry of Christchurch. It was Dr Newton who erected Hart-hall into a college. He wrote "Pluralities indefensible," 8vo; "University Education," 8vo; "The Characters of Theophrastus;" a volume of sermons. He died in 1753.—*Gen. Biog. Dict.*

NEWTON (THOMAS) a schoolmaster and physician, was born at Butley, in Cheshire, and studied at Trinity College, Oxford, and at Queen's college, Cambridge. He took orders, and became master of Macclesfield school, where he had received his early education. In 1583 he became rector of Little Ilford, in Essex. He also practised as a physician. He wrote several works, the chief of which are "History of the Saracens," 4to; "An Elegiac Poem on the Death of Queen Elizabeth;" "The Herbal to the Bible, translated from Lemnius;" "Approved Medicines and Cordial Precepts;" "Illustrium aliquot Anglorum Encomia."—*Wood.*

NIEBUHR (B—G—) a celebrated historian, who was the son of Karsten Niebuhr, the Danish traveller in Arabia, whither he was sent by his government in 1763, in conjunction with Peter Forskal, on a tour of scientific research. The subject of this article was employed in the civil service of the Prussian government. In Italy he discovered inedited fragments of the Cicero's orations pro Marco Rabirio, and pro Plancio; and in 1807 it was announced that he had also discovered some inedited works of Seneca. His observations on the antiquities of Rome led him to an investigation of its ancient history, and in 1811 he published at Berlin the first volume of his "Roman History," and a second in 1812. This work, which is rather critical than historical, tends to inculcate a very extensive degree of scepticism with regard to the facts related by ancient writers; but though the author in a few instances displays more subtlety than judgment, it must be owned that he has rectified a multitude of errors, and thrown more light on the genuine annals of Rome than any of his predecessors. M. Niebuhr published, in 1814, "Droits de la Prusse sur la Cour de Saxe," Berlin, 8vo. In 1816 he was sent ambassador from the court of Prussia to the papal government; and in 1818 he was appointed a professor of the university of Berlin; he was a counsellor of state, and a member of the Royal Academy of Sciences. The opportunities for new investigation afforded to M. Niebuhr by his embassy to Rome induced him to remodel his history, and accordingly in 1827 he published the first part of the work on an enlarged scale, and of this an English translation has appeared by Messrs. Tuffnell and Lewis, notwithstanding a translation of the first edition had been previously published by Mr. Walter. The professor removed from Berlin to the university of Bonn, where he delivered lectures on the countries and nations of the ancient world, and another course on finance, money, and banking. He was engaged as the editor or conductor of the publication of "Corpus Historiæ Byzantinæ;" and a collection appeared of his "Historical and Philological Tracts," Bonn, 8vo. He died at Bonn, January 2, 1831, aged fifty-three.—*Biog. des Hommes Vivants. Edit.*

NIEMEYER (DR AUGUSTUS HERMAN) chancellor of the university of Halle, distin-

guished as a lecturer and a public writer. He was born in that city September 1, 1754, and he received his education in the institution over which he long presided. He first began to give instructions in the university on the 18th of April, 1777; and the fiftieth anniversary of that event was commemorated by an assemblage of vast multitudes of his scholars from all parts of Germany. Among his published writings may be mentioned "The Principles of Teaching and Instruction for Learners, Tutors, and others," Halle, 1810, 3 vols, 8vo; "A Legacy to Helen from her Father," Bremen, 1798, 12mo; "Philotas," a moral Essay, 2 vols, 8vo; and Poems, 1786, 8vo. His works are extremely numerous, and he continued to add to their number till towards the close of his life, but his greatest literary services to society were undoubtedly in the department of education. He died at Halle, July 7, 1828. A list of the productions of his pen may be found in Meusel's *Gelehrte Deutschland*.—*Rev. Encyclop. For. Quart. Rev.*

NIEREMBERG (JOHN EUSEBIUS) a celebrated Spanish jesuit, who was one of the most distinguished writers the society ever produced. He was born at Madrid in 1590, and having finished his studies at Salamanca, he took the habit of St Ignatius, in opposition to the wishes of his friends, who however suffered him to persevere in his self-elected destination. After having been employed on a mission in Algarve, he applied himself to the cultivation of the science of nature, and he was appointed professor of natural history at Madrid, where he remained fourteen years. He was subsequently employed in the explanation of the sacred writings, and he died at Madrid in 1658. His works are numerous. Among the most important are "De Arte Voluntatis, lib. vii." Lyons, 1631, 8vo; "La Curiosa Filosofia y Tesoro de Maravillas de la Naturaleza," Madr. 1634, 4to; "Historia Naturæ maximè Peregrinæ, lib. xvi." Antw. 1635, folio; "Vida de S. Inigo de Loyola," Madr. 1631, 8vo.—*Sotwell. Bibl. Soc. Jes. Biog. Univ.*

NIEUPORT (C. F. A. F. LE PRUD'HOMME D'HAULX, viscount de) a French diplomatist and miscellaneous writer, born at Paris in 1746. He was, early in life, admitted into the order of Malta, and after having served in the Austrian army, and in the Maltese expeditions, he became, about 1786, chargé d'affaires at the court of the Netherlands. Nearly at the same period he obtained a commanderie, which he lost in 1793; and after the re-establishment of the kingdom of the Netherlands, he received from the prince of Orange the title of chamberlain and the decoration of the Belgic Lion. He died in August 1827. The viscount de Nieuport, who was a member of the Academy of Brussels, and other learned societies, published "Mélanges de Mathématiques," Bruxelles, 1794—99, 2 vols, 4to, with a Supplement, published in 1802; "Essai sur la Théorie du Raisonnement" 1805, 12mo; "Un Peu de Tout, ou Amusement

d'un Sexagénaire," 1818, 8vo; and academic memoirs.—*Biog. Univ. Class.*

NOBLE (MARK) an industrious writer on history, biography, and genealogy, who was rector of Barming, in Kent, to which living he was presented by George III in 1784. He was a fellow of the Antiquarian Societies of London and Edinburgh, and he wrote several papers which are inserted in the *Archæologia*. He was also the author of various distinct publications, among which may be mentioned "Memoirs of the Protectorate House of Cromwell," Birmingham, 1784, 2 vols, 8vo, second edition, London, 1787; "Memoirs of the illustrious House of Medici, with Genealogical Tables," 1797, 8vo; "The Lives of the English Regicides," 1798, 2 vols, 8vo; "History of the College of Arms," 1805, 4to; and a supplementary continuation of Granger's "Biographical History of England," 1806, 3 vols, 8vo. Mr Noble died at Barming, May 26th, 1827.—*Gent. Mag.*

NOEL DE LA MORINIÈRE (SIMON BARTHOLOMEW JOSEPH) a French traveller and naturalist, was born at Dieppe in 1765, and died at Drontheim, in Norway, in 1822, on his return from a voyage to Cape North. He successively obtained the offices of inspector of navigation and inspector-general of fisheries, and he was a member of the scientific academies of Petersburg, Turin, New York, &c. Among his works are "Tableau Historique de la Pêche de la Baleine," 8vo; "Tableau Statistique de la Navigation de la Seine depuis la Mer jusqu'à Rouen," 1806, 8vo; and "Histoire Générale des Pêches anciennes et modernes dans les Mers et les Fleuves des deux Continens," 1815, 4to, which is unfinished, two volumes only having been published.—*Annuaire Nécrolog. Biog. Univ. Class.*

NOLAN (MICHAEL) an eminent lawyer, who was a native of Ireland. After finishing his studies he was called to the English bar, where he soon distinguished himself; and he ultimately attained the office of chief justice of the Brecon circuit, in Wales. He was particularly conversant with the poor laws, tythe laws, &c. In 1793 he published, in two parts, "Reports of Cases relating to the Duty and Office of a Justice of the Peace;" in 1796 he edited, with notes, Strange's Reports; and in 1797 he printed "A Syllabus of a Course of Lectures on the Laws of England." He died in December 1827.—*Month. Mag.*

NORDBERG or NORBERG (MATTHEW) an eminent Oriental scholar, born at Upsal, where he died in 1826, at the age of seventy-nine. Among his works are, "Codex Nazaræus, Liber Adami appellatus, Syriacè transcript," &c. Lund. 1815—1817, 3 vols, 4to; "Lexicon Codicis Nazaræi," 1816, 4to; and "Onomasticon ejusd. Codicis," 1817, 4to.—*Biog. Univ. Class.*

NORMANN EHRENFELS (CHARLES FREDERIC LEBERCHT, count de) a distinguished military officer, born at Stuttgart in 1784. At the age of eighteen he entered as an ensign into the Austrian service, and

during the war with Prussia, in 1807, he was decorated with several military orders, and advanced to the rank of major. He became a colonel in 1809, and he commanded the light cavalry of the guard of Napoleon during the campaign in Russia. In 1813 he was employed as a major-general at the head of several squadrons of cavalry, to suppress the free corps of Lutzow, which, in defiance of the suspension of arms, harassed the French army. After the battle of Leipsic he refused to serve against the French, and sought refuge in Saxony, and afterwards in Austria, where he was employed in the military education of the son of count Ernest of Hesse Philipsthal. On the insurrection taking place in Greece, he determined to afford his personal aid to the patriots, and in January 1822 he embarked at Marseilles, with a number of German officers, and arriving in Greece, he was appointed by the government commandant of the fort of Navarino, where his conduct justified the confidence which had been reposed on him. After organizing a battalion of Philhellenes at Corinth, he joined Mavrocordato, had a share in the brilliant victory of Combotti, and was badly wounded in the unfortunate affair of Peta. He retired to Missolunghi, where he died of a nervous fever, November 4, 1822. The "*Journal d'une Campagne du Général Normann*" was published at Berne in 1823. — *Annales Biograph. Biog. Univ. Class.*

NORTHCOTE (JAMES) a celebrated portrait and historical painter, born in 1746, at Plymouth, where his father was a watch-maker. He was designed for the same employment, but he evinced such an early aptitude for designing and painting, that he was at length, through the intervention of Dr John Mudge, a physician at Plymouth, admitted as a pupil of Sir Joshua Reynolds. He accordingly came to London in 1771, and applied himself with so much assiduity to the cultivation of the art, that after five years' study he quitted his preceptor, and commenced painting portraits on his own account with great success. However he aspired to the loftier but less lucrative department of historical painting; and in 1777 he repaired to Italy, where he remained three years, and was admitted a member of the Imperial Academy at Florence, of the Ancient Etruscan Academy at Cortona, and of the *Accademia del Forti* at Rome. Returning to England he settled in the metropolis, and soon obtained great reputation as a painter, both of history and portrait. In 1786 he was elected an Associate of the Royal Academy, and in 1787 a Royal Academician; and for a period of thirty years his productions formed a conspicuous part of the exhibitions at Somerset House. One of the finest pictures he ever painted was the Murder of the Royal Children, Edward V and his brother Richard Duke

of York, in the Tower; and another happy production of his pencil was the scene between Prince Arthur and Hubert, from Shakspeare. One of his best portraits, executed much in the style of Sir Joshua Reynolds, is that of a Man holding a Hawk in the Marquis of Westminster's collection. At Somerset House, in 1796, Mr Northcote exhibited a series of pictures, designed to show the opposite effects of prudence and liberty in two young women, as a kind of counterpart to Hogarth's *Industrious* and *Idle Apprentice*. These paintings were cleverly executed, but they had little of the Hogarthian spirit. He was on the whole deservedly one of the most successful artists of his day. He studied deeply, and exhibited great force of conception, which is the true characteristic of genius. His colouring was peculiarly chaste and distinct, and his pictures are characterised by the most judicious admixture of light and shade. He was an acute observer of human nature, possessed excellent sense, quick perception, and great conversational powers. Confined first to his chamber, and then to his bed, he would talk for hours together with untiring vivacity, and unceasing intelligence. He died at his house in Argyle Place, London, July 30, 1831; and his remains were interred under the new church of St Mary le Bonne. Mr Northcote exercised the pen as well as the pencil, but not with equal success. His principal work is the *Life of Sir Joshua Reynolds*; and he also published *Fables, Conversations, and the Life of Titian*, in all which he was assisted by Mr Hazlitt. As a critic he was severe, and too frequently cynical. His private character was highly respectable, but his habits were penurious, and he is said to have died worth 80,000*l.* — *Ann. Biog.*

NUVOLONE (CHARLES FRANCIS) a painter, was born at Milan in 1608. His father was an eminent painter, and directed the studies of his son, who became eminent in the style of Guido; his Madonnas are particularly admired. He died in 1651. — His brother, **JOSEPH NUVOLONE**, also an artist, besides other fine paintings, is distinguished by one of St Dominic raising a dead man to life. He died at the age of eighty-four, in 1703. — *Pilkington.*

NYERUP (ERASMUS) a distinguished Danish writer, who was librarian to the university of Copenhagen, and professor of the history of literature in that institution. He was the author of various works relating to the history, biography, and literary antiquities of Denmark; and he published a *Description of Copenhagen*, and was engaged with Professor Rahbek in the "*Udsigt over Dansk Literatur*," — *Review of Danish Literature*, of which the first volume appeared in 1828. He died at Copenhagen in 1829, aged seventy-one. — *Ann. Reg.*

O BSEQUENS (JULIUS) a Latin writer, flourished AD. 395, and wrote a treatise, "De Prodigis," a catalogue of the wonders related by Livy. The best editions are Hearne's, 1703, and that of Leyden, 1720, 8vo.—*Fabricius Bibl. Lat.*

O'CONNOR (CHARLES) a learned Catholic clergyman, who long resided in the family of the Duke of Buckingham, at Stowe, as librarian to that nobleman, and confessor to his lady the late Marchioness of Buckingham. The liberality of his sentiments exposed him to the animadversions of some of the advocates for the temporal authority of the pope, who objected to his views relative to the royal veto on the appointment of Irish Catholic prelates, the propriety of which he was disposed to admit. His literary researches were chiefly directed to the elucidation of the history and antiquities of Ireland. He was the author of Columbanus's Letters, with an historical address on the calamities occasioned by foreign influence in the nomination of bishops to Irish sees, 1810—13, 2 vols, 8vo; a "Narrative of the most interesting Events, in modern Irish History," 1812, 8vo; and a collection of the ancient Irish chronicles. He died in 1828 at Balinagar, in Ireland, the son of his brother O'Connor Don.—*Month. Mag.*

O'KEEFE (JOHN) a popular comic writer, who was a native of Ireland. He was originally intended for the profession of a painter, and made some progress in drawing, but his strong taste for theatrical amusements interfered with his studies, and prevented him from becoming an artist. At the age of fifteen he wrote a comedy, in five acts, which though wild and in some respects peurile, is said to have displayed ingenuity in the management of the plot. Wishing to go upon the stage, he obtained an interview with Mr Mossop, then manager of the Dublin theatre, who gave him an engagement. He continued to play at Dublin and in the country about twelve years, as a comedian, with considerable success. At length he ventured on dramatic composition, and his first piece, "Colin's Welcome," a pastoral drama, replete with pleasant situations, was well received. He had a taste for music, and adapted the songs himself, and he wrote many essays and epigrams; but among his early productions the best was a kind of histrionic monologue, called "Tony Lumpkin's Rambles through Dublin," which afforded him abundant scope for the exhibition of broad humour. He at length left Dublin about 1780, and going to London, endeavoured in vain to procure an engagement. Thus situated he applied himself entirely to writing for the stage, and from 1781 to 1798 he composed a great number of comedies and farces, many of which were published collectively, by subscription, for the benefit of the author, 1798, 4 vols, 8vo. In 1800 O'Keefe, who was then blind, and had

been reduced by misfortunes to a state of great embarrassment, had, through the kindness of the managers, a benefit at Covent Garden theatre, when, after the performance, he was led on the stage to deliver a poetical address of his own composition, in which humour and pathos are said to have been happily blended. He subsequently published his Recollections, or Auto-Biographical Memoirs. His death took place in 18—. Among his multitudinous productions there are several that are still occasionally acted, as the Castle of Andalusia, Peeping Tom, the Farmer, Wild Oats, or the Strolling Gentleman, and the London Hermit, or Rambles in Dorsetshire.—*Theat. Dict. Gent. Mag.*

OLAFSEN (EGGERT) a learned writer, was a native of Iceland, who studied at Copenhagen. He travelled several times over Iceland with Bearn Paulson, and their "Observations" were published at Copenhagen in 2 vols, 4to, 1772. He was afterwards appointed a magistrate, and thenceforward devoted himself to natural history and poetry, and the study of the Scriptures. He was unfortunately drowned with his wife in crossing the Bredafjord in 1776.—*Henderson's Tour in Iceland.*

OLDMIXON (JOHN) a political writer, was born at Bridgewater in Somersetshire in 1673. He made himself very conspicuous by his warm opposition to the Stuarts, and accused the editors of Clarendon's History with having interpolated passages into that work, which charge was refuted by bishop Atterbury. Though so eager to accuse others of this act, he did not disdain to commit it himself, for being employed in the first edition of Kennet's Complete History he made several alterations in Daniel's Chronicle. He was collector of the customs of Bridgewater, and a forcible, although not always an accurate writer. He wrote "A Critical History of England," 2 vols, 8vo; "A History of the Stuarts," folio; "Life of Arthur Maynwaring;" "Life of Queen Anne."—*Gen. Biog. Dict.*

OLIVER (ISAAC) an English miniature painter, was born in 1556, and studied under Hilliard and Zuechero. He also painted some historical pictures of considerable beauty. He died in 1617.—**PETER OLIVER**, his son, also an excellent miniature painter, was much employed by Charles I. He died in 1654.—*Walpole's Anecdotes.*

OMMEGANCK (—) one of the most eminent landscape painters in Europe, died at Antwerp, his native place, January 18, 1826. He was a knight of the order of the Belgic Lion, and member of the Royal Institute of the Netherlands. He excelled in the exact representation of the simple beauties and graces of nature; and his numerous productions, many of which have been exhibited at Paris, have procured him the appellation of "the Racine of the Shepherds."—*Biog. Univ. Class.*

ORD (CRAVEN) FRS. and FSA. He was the son of Harry Ord, Esq. of the King's Remembrancer's Office. In January 1775 he was received into the Antiquarian Society, of which association he was long an active and useful member. He travelled with Sir John Cullum and with Richard Gough, in search of archaeological and topographical information; and as the fruit of his researches he made a large and valuable collection of impressions from sepulchral brasses, forming a series of such monuments, from the early part of the fourteenth century to the reign of Henry VIII. For some years he was one of the vice-presidents of the Society of Antiquaries; and he furnished many papers to the *Archæologia*. Among these are "An Inventory of the Crown Jewels, made in 3d Edward III.;" "An Illuminated Letter of Filiation among the Grey Friars;" "A Description of a Carving of the Wise Men's Offering in the Church of Long Melford, Suffolk;" "Sir Edward Waldegrave's Account for the Funeral of King Edward the Sixth;" "A Description of the Paintings of the Family of Eldred the Navigator;" "A Drawing of an Ancient Comb, found in the Ruins of Ickleton Nunnery, Cambridgeshire;" "An Account of the Entertainment of King Henry VI at the Abbey of St Edmund's Bury, in 1433;" and "Copies of five curious Writs of Privy Seal,—one in the time of Queen Mary, and the others of Queen Elizabeth." Besides his own publications, which appear to have been entirely confined to the *Archæologia*, he furnished important assistance to Gough for his *Sepulchral Monuments*; and to Mr John Nichols and Mr William Bray, for their respective histories of Leicestershire and Surrey. His library, including valuable manuscripts, was dispersed by sales at auction in the years 1829, 1830, and 1832. Mr Ord, who belonged to the King's Remembrancer's Office, in the Exchequer, died at Woolwich Common, in Kent, January 6, 1832, at the age of seventy-six.—*Gent. Mag. Ann. Biog.*

O'REILLY (ALEXANDER) a Spanish general, who was born in Ireland about 1735. He entered early into the Spanish army, and having served with distinction in several campaigns, he obtained the favour of Charles III, and was raised to the highest military rank. In 1774, being appointed commander of an expedition against Algiers, his reputation suffered much from the ill success of the undertaking; notwithstanding which he was chosen to conduct the war with France in 1794, when he died suddenly, at an advanced age.—*Biog. Univ. Class.*

O'REILLY (count ANDREW) general of cavalry in the Austrian service, chamberlain, commander of the imperial military order of Maria Theresa, proprietary colonel of the third regiment of light horse, &c. was the second son of James O'Reilly, of Ballincough, county of Westmeath. He filled in succession all the military grades in the Austrian army, with the exception of that of field marshal. At the battle of Austerlitz, so fatal to the

APP. B.O.S. DICT.

Austrians, the remnant of their army was preserved from destruction by the courage and skill of this officer; and on the 12th of May 1809 he held the post of governor of Vienna. The defeat of the archduke Ferdinand, by Napoleon, being followed by the appearance of the conqueror under the walls of the capital of the empire, on general O'Reilly devolved the difficult task of making an honourable capitulation with the enemy. He accordingly deputed the prince of Dietrichstein, the burgomaster, and the principal citizens of Vienna to Napoleon, who accepted the terms proposed by him, with the stipulation that the general should be the bearer of the treaty to the emperor Francis, in order that he might enforce its fulfilment by explaining to him his critical state of affairs. His death took place at Vienna, in the ninety-first year of his age.—*Gent. Mag. Ann. Biog.*

ORESME (NICHOLAS) one of the most distinguished writers of the fourteenth century. He is supposed to have been a native of Caen in Normandy, was admitted a doctor of theology of the faculty of Paris, and became grand master of the college of Navarre in 1355. He was tutor to the dauphin, afterwards Charles V, who made him bishop of Lisieux in 1377, and he died in 1382. He translated various works of Aristotle, and the treatise of Petarch, *De Remediis utriusque Fortunæ*; and he wrote sermons, and other original works, particularly one entitled "De Anti-Christo," published in the collection of Martene and Durand.—*Huet, Orig. de Caen. Biog. Univ. Class.*

OSBORNE (FRANCIS) an English writer of good family, was born in Bedfordshire about 1589. He took part with the parliament in the civil war. He died in 1639. His chief works were prohibited by authority: they are, "Plea for a Free State compared with Monarchy;" "Turkish Policy, a Discourse on Machiavel;" "Advice to a Son;" "Historical Memoirs on the Reigns of Queen Elizabeth and King James."—*Biog. Brit.*

OUDET (JAMES JOSEPH) one of the most distinguished officers in the armies of the French Republic, was born at Meynal, in the department of Jura, about 1773. He had risen to eminence by the force of merit at the period when Buonaparte returned from Egypt, and Oudet, who was sincerely attached to the republican institutions, beheld with sorrow the tyrant in the hero, and watched his movements with suspicion. The government, jealous of his influence, ordered him on a provincial command, as an adjunct of adjutant-general Malet, celebrated subsequently for his conspiracy against Napoleon. Oudet is supposed to have been concerned in the formation of a secret society, which was directed against the power of the emperor. After having been alternately employed and exiled, he had the command of the sixth supplementary regiment of the line at the battle of Wagram, in which he highly signalized himself; but the wounds which he received in that engagement caused his death shortly after.—*Biog. Univ. Class.*

OUTHIER (RENAUD) a French astro-

OZE

omer, who was a native of the province of Franche-Comté. He embraced the ecclesiastical profession, and having studied astronomy he was nominated correspondent of the Academy of Sciences in 1731. After having been appointed secretary to the bishop of Bayeux, he in 1736 accompanied Maupertuis in his journey to measure a degree within the polar circle. Returning from that expedition, he obtained a canonry in the cathedral of Bayeux, which he resigned that he might be more at leisure for study. His death took place in 1774. He published "Journal d'un Voyage fait au Nord en 1736 et 1737," Paris, 1744, 4to, reprinted at Amsterdam, 1746, 12mo; besides charts and memoirs in the collection of the Academy of Sciences.—*Biog. Univ. Class.*

OZERETZKOFFSKY (NICHOLAS YAKOVLEVICH) a Russian writer, who was one of the first members of the Academy of Sciences at St Petersburg, and who contributed by a number of useful publications to the advancement of science and literature. In 1774 he accompanied the academician Lepechin, in an exploratory tour through various parts of the Russian empire; and in 1785 he was sent to

OZE

visit the lakes Ladoga and Onega, of which journey he published an account the next year. Among his literary productions are "Elements of Natural History;" "A Translation of the Writings of Sallust;" and "Memoirs of the Progress of the Sciences in Russia, from 1803 to 1810;" besides *Academical Memoirs*. He died February 20, 1827, at the age of seventy-six.—*For. Rev.*

OZEROFF (—) a tragic poet, who flourished in the reign of the emperor Alexander I. His dramas are only four, entitled "Œdipus;" "Fingal;" "Demetrius Donskoi;" and "Polyxena;" but they exhibit beauties of a high order; and the Muse of Tragedy may be said to have been endowed by his poet with dignity and eloquence of which the works of his predecessors afford no examples. In the delineation of female character he seems peculiarly successful, and scarcely less so in the local colouring and costume of his scenes, particularly in his *Fingal*, in which he has transferred the wild and gloomy pictures of Ossian to a congenial clime. He died in 1816.—*Grech's Sketch of Russian Literature. For. Rev.*

PAG

PACHICO (FRANCIS) a Spanish painter, was born at Seville in 1571. He was eminent both in historical subjects and portraits. He was also a good writer, and produced a work called "Arte de la Pintura su antiquedad y grandezas," 4to, 1649. He died in 1654.—*Filkington.*

PACIFICUS (MAXIMUS) a Latin poet, was a native of Ascoli, where he was born in 1400. The best edition of his works was published at Parma in 1691, 4to. In some of them he is said to have described the syphilis long before Columbus.—*Traboschi.*

PAGANEL (PETER) a French statesman, who was a member of the Legislative Assembly and of the Convention. He was born in 1745. He had before the Revolution been a public teacher, from which office he retired with a pension, after twelve years' service. In 1791 he was chosen a deputy to the Legislative Assembly; and on the 10th of August 1792, when the unfortunate Louis XVI sought an asylum in the hall of the representatives, Paganel was one of the first who offered to join in a deputation to the people, in order to restrain their violence. When in the Convention he published a tract, in which he demanded that the trial of the king should be remitted to the ordinary tribunals of justice. Under the Directory he was secretary-general of the ministry of foreign affairs; and in 1803 he was made chief of the department of the grand chancery. As he had ultimately voted in the Convention for the death of the king, he was obliged to quit France in 1816,

PAL

and he took refuge at Liege, whence he removed to Brussels, where he died November 20, 1826. He was the author of "Essai Historique et Critique sur la Révolution Française," 3 vols, 8vo, which passed through three editions; and he translated into prose the "Animaux Parlants" of the ablé Casti, and wrote a memoir "Sur l'Ancienneté du Globe;" and another "Sur les Causes de la Durée de l'Empire des Chinois." Paganel was a member of several French and foreign learned societies.—*Biog. Univ. Class.*

PAGIT or PAGET (EUSEBIUS) a puritan divine, was born at Cranford in Northamptonshire, and was educated at Christchurch. After having several preferments, he finally obtained the living of St Anne's, Aldersgate-street, where he died in 1617. He wrote a "History of the Bible."—EPHRAIM PAGET, his son, was born in 1575, and was educated at Christchurch, Oxford. He held the living of St Edmund the King in Lombard-street, of which he was deprived at the rebellion. He died at Deptford in 1647. He wrote "Hæresiographia, or a Description of the Heresies of Later Times," 4to; "Christianographia, or a Description of the different Sorts of Christians in the World."—*Wood.*

PALEMON (QUINTUS RHEMMIUS FAMI-
NUS) the son of a slave at Vicenza, was rewarded by his freedom for the diligence with which he attended to his master's son at school. Having acquired sufficient to enable him to become a teacher at Rome, he settled there in the reign of Tiberius. There exist two works with his name, "De Ponderibus et

Mensuris," and "Ars Grammatica," in the *Grammatici Antiqui*.—*Moreri*.

PALMA (JACOB) a painter, was born at Serinalto, in the territory of Bergamo, and was a disciple of Titian. His pictures are scarce, and much esteemed. He died in 1688.—His great nephew, JACOB PALMA the younger, resided at Venice, and died in 1628. His paintings are much admired.—*Pilkington*.

PAPIAS, bishop of Hierapolis in Phrygia. He was the master of Polycarp, and a disciple of St John the Evangelist. He was the first who broached the Millenarian opinion respecting the reign of Christ upon the earth. He wrote "Expositions of the Discourses of the Lord," but they are lost.—*Care*.

PAREJA (JUAN DE) a painter, was a native of the West Indies, but became the slave of Diego Velasquez in Spain. In his leisure hours he amused himself with painting, but kept his productions secret. On one of the visits of Philip IV to his master's painting-room Pareja placed before him one of his own pictures, and after it had received the monarch's warmest praise he discovered himself to be the painter. The king delighted desired Velasquez to give him his liberty and instructions; but Pareja remained with his master until his death in 1670. His portraits are particularly admired.—*Cumberland*.

PARKE (JOHN) an eminent musical performer, who was born in 1745. He studied the theory of music under Baumgarten, and as an instrumental performer under Simpson, the best hautboy player of his time. In 1776 he was engaged to play in the oratorios during Lent, and he afterwards played at Ranelagh and Marylebone gardens. In 1768 he was engaged to play the principal hautboy at the King's theatre, and about 1770, he succeeded Fischer as hautboy concerto player at Vauxhall gardens, which situation he held many years; and near the same period he became one of the band at Drury Lane theatre. In 1783 he became known to the prince of Wales, who was delighted with his talents, and he was consequently attached to the Carlton House band, with a salary of 100*l.* a year. He was now in the highest reputation, he performed at the professional concert, at the concert of ancient music, and at many private concerts, and for nearly forty years he was likewise regularly engaged at most of the great provincial music meetings. He composed many concertos for his own performances, but he could never be persuaded to permit their publication. He died August 2, 1819. Mr Parke is said to have left in manuscript, a "Sketch of the General State of Music in England during the last Forty Years."—*Month. Mag.*

PARKINSON (THOMAS) a distinguished mathematician and natural philosopher, who was born at Kirkham in the Fylde, Lancashire, June 14, 1745. He was educated at Christ college, Cambridge, where he took the degree of B.A. in 1769; and the same year he entered into holy orders. In 1787, he published "A System of Mechanics," 4to; and

in 1789, "A System of Mechanics and Hydrostatics," 4to, a work of great value, on which depends his reputation as a man of science. In 1790 he obtained the rectory of Kegworth, in Leicestershire, which he held till his death, November 13, 1830; having also held the archdeaconry of Leicester, the chancellorship of Chester, and a prebend in St Paul's Cathedral, London. While at college, he was employed, by the Board of Longitude, in the laborious calculation of tables of the series of parallax and refraction. He published several occasional charges and single sermons.—*Ann. Biog.*

PATRICK (SAINT) the patron saint of Ireland, (whose name was Succathus, until changed by pope Celestine,) was born in 373, at a village called Bonaven Tabernæ, now Kirkpatrick, on the Clyde. When young he was carried captive by barbarians to Ireland, but after passing six months in slavery he returned to Scotland. He was not long settled before he professed himself prompted by visions and other signs to undertake the conversion of the pagan Irish. He was ordained accordingly, and proceeded to Ireland, where the greatest success crowned his endeavours. He converted and baptized the kings of Dublin and Munster, and the seven sons of the king of Connaught. He fixed his metropolitan see at Armagh, where he founded three monasteries and several schools. Nennius states that his missions continued forty years, and several miracles are attributed to him, particularly the asserted freedom of Ireland from venomous creatures, which is ascribed by the superstitious to the benediction of St Patrick. He died at Down in Ulster on the 17th of March, 493. Sir James Ware published his works, or at least those ascribed to him, in 1658, London.—*Life by Ware*.

PAULA (SAINT) a Roman lady, descended from the Scipios and the Gracchi, was born in 347, and becoming a widow she settled at Bethlehem, and founded some monasteries there, of which St Jerome had the direction. She died AD. 407.—*Baillet*.

PAULET (JOHN JAMES) a French physician, member of the Royal Society of Medicine at Paris, was born in 1740. He studied at the university of Montpellier, and having taken his degrees, he distinguished himself by the publication of a learned treatise on the "History of the Small Pox," 1765, 2 vols. In 1776 he published "Recherches Historiques et Physiques sur les Maladies Epizootiques," 2 vols, 8vo; and he subsequently became editor of the *Gazette de Santé*. He died at Fontainebleau, in October 1826. Besides the works mentioned, he was the author of "Traité des Champignons," 1775, 2 vols, 4to; and "Traité de la Morsure de la Vipère-aspic de Fontainebleau."—*Biog. Univ. Class.*

PAULIAN (ADME HENRI) a French jesuit, distinguished as a natural philosopher. He was born at Nismes in 1722, and became professor of physics in various colleges of his order, after the extinction of which he retired to his native place, where he died in 1802.

Father Paulian published "Dictionnaire de Physique," 3 vols, 4to; "Dictionnaire des Nouvelles Découvertes en Physique," 2 vols, 8vo; "Traité de Paix entre Descartes et Newton," 3 vols, 12mo; "Système Général de Philosophie," 4 vols, 12mo, besides other works.—*Biog. Univ. Class.*

PAYNE (JOHN) an engraver, who died in 1648. He is distinguished as having been the first English artist who executed line engraving. Among the productions of his burin are several portraits from Mytens and other Flemish portrait painters.—*Elmes's Dict. of the Fine Arts.*

PEARSON (GEORGE) an eminent physician and medical writer, who was born at Mosborough hall, in Derbyshire, the seat of his father, a physician who had retired from practice. The subject of this article became a student at the university of Edinburgh in 1770, and he was admitted a member of the Royal Medical Society in that city. He took the degree of MD. in 1773, and his thesis on that occasion, "De Putredine," was inserted in the first volume of the Edinburgh Medical Commentaries. In 1774 he removed to London, and studied under Dr George Fordyce, at St Thomas's Hospital; the following year he went to the continent, and having travelled in France, Germany, and Holland, he returned to England in 1777, by way of Hamburgh. He first settled as a physician at Doncaster, where he remained about six years, and then became a candidate for medical practice in the metropolis. He was chosen one of the physicians to St George's Hospital, where during many years he delivered lectures on medicine, physiology, materia medica, and chemistry. He enjoyed much reputation, as a practitioner and as a man of science, and he was chosen a fellow of the Royal Society, to whose transactions he furnished several contributions. His death, which took place at a very advanced age, was owing to accident. Being a man of indefatigably studious habits, he was accustomed during many years to sit up alone to an extremely late hour, and on the night of October 24, 1828, he is supposed to have fallen backward from the top of the stairs, as he was proceeding to his bed-chamber. In the morning he was found at the foot of the stair-case, in a state of insensibility, with a large wound in his head; and though he afterwards recovered, his consciousness, his death took place the same day. Among his publications may be mentioned "Observations and Experiments on the Buxton Waters," 1784, 2 vols, 8vo; "A Translation of the Table of Chemical Nomenclature drawn up by the French Chemists," 1794, 4to; "An Inquiry concerning the History of the Cow Pox," 1798, 8vo; and other tracts on the same subject.—*Gent. Mag. Month. Mag.*

PELLERIN (JOSEPH) a French antiquary, died at Paris in 1782. He wrote ten quarto volumes on the subject of medals, his cabinet of which was purchased by the king of France. Pellerin was commissary-general, and clerk of the marine at Paris.—*Dict. Hist.*

PENNICUIK (ALEXANDER) a poet and physician, was born in 1632, at New Hall, near Edinburgh. He was liberally educated at home and abroad. He is said to have furnished the plot and written part of Allan Ramsay's Gentle Shepherd. He was also the author of a description of Tweeddale, and several poems. He died in 1722.—*Chalmers's Caledonia.*

PERCY (PETER FRANCIS, baron) a distinguished French surgeon, born at Montagny in Franche-Comté, in 1754. He took the degree of MD. at the university of Besançon, and afterwards went to Paris, where he gained several prizes proposed by the Academy of Surgery. At the commencement of the revolutionary wars he engaged in professional service in the army, and he successively exercised the functions of chief surgeon of the armies of the Moselle, the Sambre and Meuse, and the Rhine. Buonaparte made him a commandant of the legion of honour and a baron. He was a representative of the department of Doubs during the hundred days after the return of Napoleon from Elba, and he was present, in his professional capacity, at the battle of Waterloo. On the second return of the Bourbons he was dismissed from office, and he retired to his estate at Mongey, near Lagny. His death took place at Paris in 1825. Baron Percy was the author of "Manuel du Chirurgien d'Armée," 1792, 12mo; "Pyrotechnie Chirurgicale pratique, ou l'Art d'appliquer le Feu en Chirurgie," Metz, 1794, 8vo; besides other works.—*Rev. Encycl. Biog. Univ. Class.*

PERIGNON (marquis DOMINIQUE CATHÉLINE de) peer and marshal of France, was born at Grenoble in 1754. He was deputed to the Legislative Assembly from the department of Upper Garonne in 1791, which station he quitted to join the army of the Eastern Pyrenees, and gradually rose to the chief command as successor to general Dugommier. He displayed his talents at the battles of Jonquiere, St Sebastian, and La Madeline, and at the capture of the forts of Figuières and of Roses. On the conclusion of peace with Spain he was nominated ambassador at Madrid, where he signed an offensive and defensive treaty of alliance between France and Spain in 1796. He subsequently distinguished himself in the army of Italy, and in 1808 he replaced Jourdan as commander of the French at Naples, several years previously to which he had been made a senator and a marshal. In 1814 the count d'Artois nominated him commissary extraordinary of the first military division. On the return of Buonaparte he attempted to organize a plan of resistance in the south of France, and not succeeding he retired to his estates. After the second restoration of Louis XVIII he was appointed to the government of the first military division, and was made a peer of France. His death took place in 1819.—*Dict. des H. M. du 18me S. Biog. Univ. Class.*

PERRIER (CASIMIR) a celebrated French statesman, who was born at Grenoble, October 12, 1777. He was the son of a rich mer-

chant; and at an early age he entered into the army, and served in Italy, in the staff of the military engineers, during the campaigns of 1799 and 1800. On the death of his father he relinquished the pursuit of military fame to devote himself to commerce. In 1802 he founded a banking establishment at Paris; and he subsequently established a number of cotton-spinning and sugar-refining manufactories, and also steam flour mills, all which were eminently successful, and laid the foundation of an immense fortune. He first became known to the public, in 1816, as the writer of a pamphlet against the foreign loan system, which was remarkable for the display of a lucid clearness of argument, and a profound knowledge of finance. In 1817 he was elected one of the deputies to the legislative body from the department of the Seine, and from that period till the revolution of 1830 he acted as the steadfast opponent of the ministry, in their encroachments on the rights and privileges of the people. He particularly signalized himself by his hostility to the Villele Administration, having almost singly supported the burden of the opposition to the famous budget of M. de Villele, which he disputed in every article, with equal perseverance and talent. When M. de Polignac became president of the council, the opposition of Perrier assumed a more decided character; and he was one of the foremost among the 221 deputies who voted for the famous address which led to the fatal Ordonnances of July. When the Revolution broke out he at once avowed himself the advocate of the popular cause, and opened his house as the place of meeting for the deputies who assembled to protest against the illegality of the proceedings of the government. Firmly attached, however, to the principles of constitutional opposition, and therefore shrinking from the probable effects of a revolution, he was one of the last to abandon the hope that his infatuated sovereign would perceive the error he had committed, and, by a timely revocation of the Ordonnances, prevent the necessity for the extreme measure of an appeal to arms, and a consequent change of the dynasty. When these became inevitable, M. Perrier devoted himself with ardour to the task of consolidating the new throne of the king of the French, and reassembling those elements of order and stability which the recent convulsion of the state had scattered but not annihilated. On the dissolution of the ministry of M. Laffitte, Perrier was called to the head of the government, and he immediately entered upon that system of conservative policy which he continued until the close of his career. The details of his ministry will occupy the pen of the future historian, and to posterity must be left the office of awarding him the praise or censure which he deserved. The last time he took any prominent part in the debates of the Chamber of Deputies was on the 20th of March, 1832, when he pronounced an eloquent defence of the conduct of government with respect to the disturbances which had taken

place at Grenoble. The last time he was present in the chamber was on the 29th of the same month, when he merely brought in several private bills. On the 3d of April he was attacked by the cholera morbus, from which he partially recovered; but after lingering for a while in a state of pain and debility, probably heightened by mental anxiety, death put a period to his sufferings, on the morning of May 16, 1832. As an orator Perrier was energetic and impassioned; the natural warmth of his temper, heightened by the irritability produced by ill health, frequently imparted an abruptness and acerbity to his style which injured both the oratorical and moral effect of his eloquence, but his reasoning was forcible, and his language commanding and effective. It will be the province of others, as we have already observed, to pronounce a judgment concerning his political system, which has been the object of enthusiastic eulogium from one party, and unmeasured invective from another; but be his system good or bad, it would at least be allowed, by his most violent opponents, that the course which he adopted from conviction, he persisted in with unremitting energy, thus giving a strong proof at least of the honesty of his intentions.—*For. Rev.*

PERROT (Sir JOHN) a statesman, was born in Pembrokeshire about 1527. At the coronation of Edward VI he was one of the knights of the Bath. In the reign of Mary he was imprisoned for taking part with the Protestants. In 1572 Elizabeth made him president of Munster, where he suppressed a rebellion, and appointed him admiral of a fleet for the protection of Ireland against Spain. In 1583 he was made lord deputy of Ireland, in which situation he so ill conducted himself that he was recalled, tried for high treason, and sentenced to death. He was respited, but died in the Tower in 1592.—*Biog. Brit.*

PERRY (JOHN) an engineer, was born in Gloucestershire, and entering into the navy he became captain of a fire-ship, which he unfortunately lost, and was in consequence broke and imprisoned. On the visit of the czar Peter to this country, he took him back to Russia, and employed him in opening a communication between the Volga and the Don. But here again failing in his expectations he returned to England, and was employed in stopping the breach in the bank of the Thames near Dagenham in Essex. He died at Spalding in 1733. He wrote "The State of Russia," 8vo; "An Account of the Stopping of Dagenham Breach," 8vo; "A Plan for Manning the Navy, with a Narrative of his Case," 4to.—*Aikin's Biog. Dict.*

PERTHUIS DE LAILLEVAUT (LEON DE) a French engineer and agriculturist, born near Meaux in 1757, and died at Paris in 1818. He was one of the officers charged with the construction of the fort of Château Neuf, which serves for the defence of the town of St Malo. Besides a number of reports made to the Society of Agriculture, of which he was a member, he wrote "Mémoire sur l'Art de perfectionner les Constructions Ru-

rales," 1805, 4to; and "Mémoire sur l'Amélioration des Prairies Naturelles et sur leur Irrigation," 1805, 8vo.—*Biog. Univ. Class.*

PERTICARI (count JUILIO) an Italian philosopher and man of letters, born at Savignano in 1779. He deserved the approbation of all true patriots by endeavouring, in his writings, to excite his degenerated fellow-citizens to imitate the stern virtues of their ancestors, persuaded as he was that the inculcation of virtue was one of the first duties of a public writer. He was the author of some fragments published in the Propositions of Signor Monti for Corrections and Additions to the Dictionary of Della Crusca; and he was one of the principal contributors to the *Giornale Arcadico* of Rome. He died at Rome in 1822.—*Ibid.*

PETACHIAS, or **PETACHIA**, a Jewish rabbin of the twelfth century, who was a native of Ratisbon. He is celebrated among the Hebrews as a traveller and an historian. His itinerary, entitled "Sibub Olam," or "Travels over the World," edited from his papers by his brothers, the rabbins Isaac and Nahaman, was printed at Prague in 1595, 4to, and subsequently at Altdorf and Amsterdam. It has been translated into Latin, and Basnage has given an abstract of the work in his *History of the Jews*.—*Biog. Univ.*

PETIT-THOUARS (ALBERT DU) a distinguished French naturalist, who was a member of the Institute, of the Royal Agricultural, Horticultural, and Philomathic Societies of Paris; and a knight of the order of St Louis. He cultivated with success various branches of natural history, but his attention was especially directed to the study of botany, and he was for more than twenty years director of the Royal Nursery of Roule, an establishment which has in some degree existed ever since the reign of Louis XII. He was the author of "Mélanges de Botanique;" "Dialogues sur l'Histoire Naturelle;" "Essai sur la Végétation;" and "Recherches sur les Orchides;" and he published, in the Memoirs of the Academy of Sciences, "Notice Historique sur la Pépinière du Roi au Roule." He died May 11, 1831.—*Gent. Mag.*

PETTITOT (CLAUDE BERNARD) director-general of the university of Paris, was born at Dijon in 1772. He went to Paris at the age of eighteen, and was employed in writing for the press till 1800, when he was appointed chief of the bureau of public instruction of the prefecture of the Seine. He relinquished that office in 1804; and five years afterwards his friend M. de Fontanes procured him the post of inspector-general of the university; and as he resigned his functions during the hundred days, he was, after the second return of the king, nominated secretary-general of the commission of public instruction. In 1821 he became a member of the royal council of the university; and he died in 1825. He was the author of three original tragedies, and he executed good translations of the tragedies of Alfieri and the novels of Cervantes. He also edited *Répertoire du Théâtre Fran-*

çais, avec Notices, &c. 1803—4, 23 vols, 8vo, and other works.—*Biog. Univ. Class.*

PETIT-RADEL (LOUIS FRANCIS) a French architect, inspector-general of civil edifices, born at Paris in 1740. After having obtained several prizes from the Academy of Architecture, he travelled to Italy, and on his return home he delivered lectures on architecture. He consecrated a great part of his large fortune to the formation of a cabinet of antiquities, and other curious specimens of art. His death took place in 1818. Besides other works he constructed the grand basin of Roule. He also published engravings of ruins and architectural subjects; and a tract entitled "Projet pour la Restauration du Panthéon Français," 1799, 4to.—*Ibid.*

PETIT-RADEL (PHILIP) brother of the preceding, president of the faculty of medicine, was born in 1749. He went as a surgeon-major in the army to the East Indies, and after residing three years at Surat, he returned home, and in 1782 became professor of surgery at Paris. Having made a second voyage to the East Indies, he returned in 1797, and the following year was nominated professor of clinical surgery at the school of medicine at Paris. He died in 1815. He published "Voyage Historique, Chorographique, et Philosophique, fait dans les Principales Villes d'Italie," 3 vols, 8vo; and he wrote the "Dictionnaire de Chirurgie" for the *Encyclopédie Méthodique*, besides other works.—*Ibid.*

PETRE (Sir WILLIAM) a statesman, was a native of Devonshire, and was educated at Exeter college, Oxford. In 1523 he was elected fellow of All Souls, and then took his degree in civil law, and became principal of Peckwater-inn. He was employed by Thomas lord Cromwell in a visitation of the monasteries. He became master of the requests, was knighted, and made one of the secretaries of state, and finally treasurer of the court of first-fruits. He was a liberal benefactor to All Souls and Exeter colleges. Sir William Petre died in 1572.—*Prince's Worthies.*

PETROF (BASIL PETROVITSCH) a Russian poet and philological writer, born at Moscow in 1736. He was destined for the church, but an ode which he composed on the coronation of Catherine II procured him the patronage of that princess, who gave him the title of reader to her imperial highness, and a place in the civil administration. He resigned his offices (retaining however the salaries attached to them) in 1780, and devoted the remainder of his life to literary pursuits. He died December 4, 1799. A complete edition of the works of Petrof was published at Petersburg, 1811, 3 vols, 8vo. He translated into Russian the *Æneis* of Virgil.—*Biog. Univ. Class.*

PETTUS (Sir JOHN) a native of Suffolk, and member of parliament for Dunwich, in the reign of Charles II. Becoming involved by some mining schemes, he was imprisoned in the Fleet, where he died about 1690. He wrote "England's Independency of the Papal Power," 4to; "Ficta Minor, or the Art of

Assaying Metals," folio, 1683; "The History of the chief Mines and Mineral Works in England and Wales," 1670, folio.—*Grain-ger*.

PEYRE (MARIE JOSEPH) a French architect, who was born at Paris in 1730, and died in 1785. He was architect to the king, and a member of the Royal Academy of Architecture. In 1765 he published "Œuvres de Architecture," containing designs for a royal palace and a cathedral church; and he constructed, in concert with Wailly, the ancient hall of the Théâtre Français, now the Odeon. A second edition of his works was published at Paris, 1795, folio, by his son, who holds the office of architect to the government.—**PEYRE (ANTOINE FRANÇOIS)** brother of the preceding, was born at Paris in 1739. He studied painting, but subsequently adopted the profession of his elder brother. He became a pensionary student at Rome in 1763, and he executed three fine designs, representing the interior of the basilic of St Peter; a view of the cupola and canopy enlightened by the luminous cross on Good Friday; and another view of the colonnade during the procession on the day of Corpus Christi. After his return he successively became comptroller of the royal buildings at Fontainebleau, and then at St Germain. He was imprisoned during the reign of terror, and being liberated on the fall of Robespierre he was subsequently a member of the Institute, of the Council of Civil Architecture, and of the Administration of Hospitals. He died in 1823. His "Œuvres d'Architecture" were published at Paris, 1819—20, folio; and he was the author of several memoirs in the collection of the Institute.—*Annuaire Nécrolog.* *Biog. Univ. Class.*

PEZRON (PAUL) a Bernardine and doctor of the Sorbonne, was born at Hennebion in Bretagne in 1639. He held the abbey of Charmoy for some time, but resigned it to devote himself to study. He died in 1706. He wrote "Essai d'un Commentaire sur les Prophètes," 12mo; "De l'Antiquité de la Nation et de la Langue des Celtes," 8vo; "Histoire Evangélique confirmée par la Judaïque et la Romaine," 3 vols; "Défense de l'Antiquité des Temps;" "L'Antiquité des Temps rétablies," in which he endeavours to support the chronology of the Septuagint against that of the Hebrew Bible.—*Dict. Hist.*

PFEFFERCORN (JOHN) a converted Jew, flourished in the beginning of the sixteenth century. He tried to persuade the emperor Maximilian to burn all the Hebrew books except the Bible, as blasphemous, but this was prevented by Reuchlin. He wrote "De abolendis Judæorum Scriptis;" "Narratio de Ratione celebrandi Paschæ apud Judæos."—*Moreri*.

PFFENNINGER (MATTHEW) a Swiss painter and engraver, born at Zurich in 1739, and died about 1810. He executed Views in Switzerland, from his own designs; and others from the designs of Aberli, besides the Tomb of Virgil, and the Statue of Marcus Aurelius at Rome, after Brandoin.—**PFFENNINGER**

(HENRY) a painter and engraver of the same family with the preceding, born in 1749. He executed many figures for Lavater's Physiognomy; seventy-five portraits to illustrate Leonard Meister's Historical Abridgement of the Lives of Illustrious Natives of Switzerland, Zurich, 1781, 3 vols, 8vo; and thirty-four more which accompany the same writer's Collection of the Portraits of the most celebrated German Poets, 1785, 8vo.—*Biog. Univ. Class.*

PIFFER (FRANCIS LOUIS de) a lieutenant-general in the French service, born at Lucerne in Switzerland, in 1716. He distinguished himself at the sieges of Menin, Ypres, and Fribourg, and in the battles of Rocoux and Lafeldt; and after fifty years' service he retired to his native country. He then commenced the formation of a plan of Switzerland, in relief. This work when finished was twenty-two feet and a half in length, and twelve in breadth, and was composed of one hundred and thirty-six pieces, which could be separated at pleasure. This fine monument of the industry and skill of the artist, which is remarkable for its accuracy, was engraved in the Tableaux Pittoresques de la Suisse, and also by Mechel in 1783, and by Clausner in 1795.—*Ibid.*

PHELIPPEAUX (A. LE PICARD de) a French officer of artillery, born in 1768. He received a military education, and was the fellow-pupil and rival of Buonaparte. In 1786 he entered as second lieutenant into the regiment of Besançon; and having quitted France in 1791, he made a campaign the following year with the corps of emigrants under the French princes. In 1795 he re-entered France to organize a royalist insurrection, in the central provinces, when he raised a body of troops, took Sancerre, and for some time maintained his position in Berri. But he was at length obliged to seek concealment, and after being arrested and making his escape, he went to Paris, where he effected the liberation of Sir Sidney Smith, then confined a prisoner in the Temple. With him he went to England, and Sir Sidney procured for him the rank of colonel in the English service; and he afterwards accompanied an expedition to the Mediterranean, and assisted in the defence of Acro against Buonaparte. He died of fatigue shortly after the raising of the siege of that place, May 20, 1799.—*Ibid.*

PHILIPIDES (DEMETRIUS) a modern Greek writer, who died in 1827. He was the author of "The History of Wallachia;" and other works.—*Rizo's Lit. Hist. of Greece.*

PHILLIP (ARTHUR) an English naval officer, who was the first governor of Botany Bay. His father was a German, and he was born in London in 1738. He entered into the navy at the age of seventeen, and gradually reached the rank of post-captain. In 1787 he was appointed governor-general of New South Wales, and setting sail with a colony of convicts, May 13 that year, he arrived at Botany Bay, January 18, 1788. Thence he removed to Port Jackson, where he established a settlement, over which he presided five years, and

then returned to England. He was made a vice-admiral, and he passed the remainder of his life chiefly at Lymington in Hampshire, but died at Bath in 1814. An Account of the Voyage of Governor Phillip to Botany Bay was published in 1789, 4to.—*Original*.

PIAZZI (JOSEPH) an Italian astronomer, who distinguished himself by the discovery of one of the asteroids or smaller planets. He was born at Ponte in the Valteline, in 1746; and he commenced his studies at Milan in the college of Calchi and the schools of Brera, being instructed in literature by Tiraboschi, and in the physical and mathematical sciences by father Baccaria. Having entered into the order of the Theatines he also studied theology at Rome, and perfected himself in the mathematics under fathers Jacquier and Le Lucur. He became professor of those sciences successively at Genoa, at Malta, and at Rome, where he had for his colleague Barnabas Chiaramonti, afterwards Pope Pius VII. In 1780 he was appointed professor of transcendental mathematics in the university of Palermo, whence he banished the remains of scholastic philosophy, and introduced that of Locke and Condillac. He was in 1787 made director of the observatory founded in that city. At this period he visited Paris and London, in the former of which cities he became acquainted with Laland, Mechain, Delambre, Bailly, and other celebrated persons; and in London he was introduced to Maskelyne, Herschell, Vince, general Roy, and other persons engaged in scientific pursuits; and he wrote a paper on the eclipse of the sun in 1788, which was inserted in the Philosophical Transactions. On his return to Palermo he employed himself in making astronomical observations and calculations, and at length produced his work on the observatory of Palermo, which was followed by another on the observatory of Naples. As the result of his labours he published, in 1803, his catalogue of 6748 fixed stars, which was crowned by the French Institute. Previously to the publication of this work he had discovered the new planet, Ceres, which led to the successive discovery of three other planets. The king of Naples, Ferdinand IV, thinking himself immortalized by Piazzi, who had bestowed the royal name on that star, ordered that a gold medal should be struck, to perpetuate the name and memory of the astronomer, who, preferring the interest of science to his own fame, requested that the cost of the medal might be expended in the purchase of an instrument useful for his observatory. He subsequently published two more works, one concerning the discovery of Ceres, and the other exhibiting the results of observations on this new planet. A second catalogue of 7646 stars, with the arrangement of which he had charged M. Nicolas Cacciatore, appeared in 1805, and was like the former crowned by the institute of France. This distinguished astronomer also produced various treatises and memoirs of great importance, on the Obliquity of the Ecliptic, on the

Parallax of some of the principal Fixed Stars, on the Measure of the Tropical Solar Year, on the Comet of 1811, on the Variation of the Axis of the Earth, and other subjects. Piazzi was always treated with distinction by his own government, and he was admitted a foreign associate of the Royal Society of London, the Institute of France, the Academies of Gottingen, St Petersburg, and Berlin, and other learned institutions. His death took place July 22, 1826. Delambre has strongly remarked that the science of astronomy owes more to Piazzi and to Maskeline than to all others who have cultivated it since the time of Hipparchus.—*Rev. Encycl.*

PICHAT (—) a French dramatist and public writer, who died after a long illness in 1829, at the age of thirty-nine. His first production was a tragedy entitled "Turnus," which has long maintained its place on the stage. He subsequently composed the tragedies of "Leonidas," and "William Tell," which procured him a place in the first rank of the dramatic authors of the age. His versification is constructed on the model of Corneille, and he displays few traces of imitation of foreign writers. His private character is said to have been highly respectable, and he was distinguished for modesty, regularity of manners, and domestic virtues.—*Le Constitutionnel*.

PICTET (JOHN LOUIS) an astronomer, born at Geneva in 1739. He was employed in 1768, together with Mallet, to observe the transit of Venus over the sun's disc, in the most remote parts of the Russian empire. The state of the atmosphere prevented the observations from taking place; but Pictet collected much curious information in his travels, and returning to Geneva was made a member of the Council of Two Hundred, a counsellor of state, and at length syndic. He died in 1781. In the Memoirs of the Academy of Petersburg for 1769, he published "*Observationes variae occasione Transitus Veneris per Solis Discum, in Siberia in an. 1769 institutæ in Umbæ pago.*"—*Biog. Univ.*

PICTET (MARCUS AUGUSTUS) successor of the celebrated Saussure in the chair of philosophy at Geneva. He was born in that city in 1752, and he died there April 20, 1825, a correspondent of the French Institute, a member of the Royal Societies of London, Edinburgh, Munich, &c. In 1798 he belonged to a deputation appointed to negotiate the reunion of Geneva to the French republic, and to settle the debts of the ancient government. At the same time he was nominated one of the fourteen delegates to administer the funds destined for the support of the Protestant religion, and the establishments for public instruction. These employments did not prevent him from cultivating the physical sciences, to the study of which he was particularly devoted. He became a member, and afterwards secretary of the tribunate; and on the dissolution of that body of the legislature, he was appointed one of the five inspectors-general of the imperial university. After the political

PIK

events of 1814 he retired to his own country, and spent the latter part of his life in scientific occupations and commerce with his learned contemporaries. Among his works are, "Essai sur le Feu," 1791, 8vo; "Voyage de trois Mois en Angleterre, en Ecosse, et en Irlande," 1803, 8vo; besides contributions to the Journal de Paris, the Voyages de Saussure, the Lettres de Deluc, and the Histoire Littéraire de Genève, par Senebier.—**PICTET DE ROCHEMONT** (CHARLES) younger brother of the foregoing, was born at Geneva in 1755. At the age of twenty he entered into a Swiss regiment in the service of France, and ten years after returned to his native country. In 1792 he was employed to defend the city of Geneva against the attack of the French under general Montesquiou; and in 1796, when the government was overturned by the French, he retired from the public service to devote his time to agriculture and literary pursuits. In conjunction with his brother and M. Maurice he conducted the Bibliothèque Universelle; and he also edited a Journal d'Agriculture, which he filled during twenty-nine years with instructive details, observations, and experiments made at his farm at Lancy, which became a model for rural establishments. The overthrow of the power of Napoleon led to his again engaging in the public service, and he was employed in missions to Paris, Vienna, and Berlin, as minister-plenipotentiary of the Helvetic confederation, after which he received from the diet a diploma of acknowledgment in the name of the twenty-two cantons. Honoured and esteemed by his fellow-citizens for his services, he resided at Geneva till his death, which took place December 29, 1824. He published "Traité des Assolemens, ou l'Art d'établir les Rotations des Récoltes," 1801, 8vo; "Cours d'Agriculture," 10 vols, 8vo; and translations of Paley's Natural Theology, and Edgeworth's Practical Education.—*Rev. Encyc. Biog. Nouv. des Contemp. Biog. Univ. Class.*

PICTON (SIR THOMAS) a military officer of eminence, born in the principality of Wales. He served with distinction against the French and Spaniards in the West Indies, and subsequently obtained great reputation under the duke of Wellington in Spain and Portugal. He also displayed great bravery at the battle of Waterloo, where he was killed by a cannon ball, June 18, 1815.—*Gent. Mag.*

PIGAFETTA (ANTHONY) a navigator of the sixteenth century, who was a native of Vicenza. He sailed with Magellan in the expedition to the Molucca islands, in which that commander perished; and Pigafetta was one of the eighteen surviving navigators, who returned to Seville in 1522, after a voyage of 1124 days. He kept a journal of the expedition, published a few years ago by M. Amoretti. Pigafetta was made a knight of Rhodes in 1524; and is supposed to have died in his native country, but at what period is uncertain.—*Biog. Univ.*

PIKLER (JOHN ANTHONY) an engraver of gems, born at Brixen, in the Tyrol, in 1700.

PIN

He settled at Naples, where his talents procured him great reputation and wealth. In 1743 he removed to Rome, and died there in 1779. Among his latest productions were two heads of Homer, one on a cornelian, the other in cameo, which have been greatly admired.—**PIKLER** (chevalier JOHN) son of the preceding, was the most skilful gem engraver of his time. He was born at Naples in 1734, and died in 1791. His numerous works not only procured him general admiration, but also made him a favourite with the emperor Joseph II, who conferred on him the order of knighthood. He undertook a collection of engraved plates from the finest works of Raphael in the Vatican, and a selection of impressions of engraved stones and cameos, which were left imperfect at his death.—*Biog. Univ.*

PILLET (CLAUDE MARIE) a French writer, who was one of the principal conductors of the Biographie Universelle. He was born at Chambery about 1773, and died at Paris February 4, 1826. He was the author of "Analyse des Cartes et des Plans dressés pour l'Histoire des Croisades," 8vo; and a contributor to the Biographie des Hommes Vivans, and other works.—*Biog. Univ. Class.*

PINDEMONTE (count HIPPOCRITO) an eminent Italian poet, who was born at Verona, in 1753. He was educated at the college of the priests of the order of St Charles, at Modena. He completed his studies at the age of eighteen, and shortly after he published a series of essays in prose and verse, some of which were in Latin, and others were translations from the Latin and the Greek. He is said to have been as much distinguished for the excellence of his disposition as by his genius and talents. His constitution was naturally weak, yet by care and temperance he attained to an advanced age. He travelled in England, France, Germany, Holland, and other parts of Europe, acquiring wherever he went the friendship of persons of worth and ability. Among his most intimate acquaintance was the celebrated dramatist Alfieri, whom he was accustomed to meet at Paris and at Florence. His death took place at Verona in 1829, and his funeral obsequies were attended by the magistrates of that city, by the professors of the public schools, the members of the Agrarian Academy, and numbers of the most distinguished inhabitants. Among his works may be mentioned a translation of the first two books of the Odyssey; "Fragments of the Georgics;" "Abarrite;" "Bucolics, in prose and verse;" "Two Epistles in verse, one addressed to Homer, and the other to Virgil;" "The Tomb;" "Verses on the Thecus of Canova, and on the death of that artist;" "Eulogiums on several distinguished Persons;" "Verses on the Voyages of Captain Parry;" "Sonnets addressed to Antonio Caguzli;" "Stanzas on the Death of Miss Bathurst, who was drowned in the Tibur;" "Discourse on Theatres;" "Dissertation on the English Mode of Gardening," &c.—*Month. Mag.*

PINEAU (GABRIEL du) a lawyer, was

born at Angers in 1573. He was distinguished as a pleader, and being created counsellor to the presiding of Angers he rendered himself so beloved as to acquire the name of the "Father of the People." He was the author of "Commentaries upon the Customs of Anjou," 2 vols, folio; and "Notes in Answer to those of Du Moulin on the Canon Law." He died in 1644.—*Moreri*.

PINEDA (JOHN) a Spanish jesuit, was a native of Seville, and died in 1637. He was professor of philosophy and theology, and wrote "A Commentary on Ecclesiastes;" "Commentaries on Job;" "A History of the Church," 4 vols, folio; "De Rebus Salomonis," folio; "The History of Ferdinand III."—*Ibid*.

PISCATOR or FISCHER (JOHN) a Protestant divine, was born at Strasburgh in 1546. He was successively a Lutheran, a Calvinist, and an Armenian, and was professor of theology at Herborn. He translated the Bible into German, and wrote several works collected in 4 vols, folio. He died in 1626.—*Mosheim*.

PLAUTUS (MARCUS ACCIUS) a celebrated comic writer of antiquity, was a native of Sarsina, a small town in Umbria. His real name was Marcus Accius; he is thought to have received the surname of Plautus from his ill-formed and splay feet. He is supposed to have been the son of a slave, but few particulars of his life are known. Cicero fixes the period of his death B.C. 184, in the first year of the elder Cato's censorship, when Lucius Portius Licinius and Claudius Pulcher were consuls. The comedies of Plautus were so much esteemed in his own time that he gained considerably by them, but unfortunately entering into trading speculations he was ruined, and at the time of a general famine he was obliged to work at the mill, and during this drudgery he composed three plays. The original number of his plays is uncertain, only twenty remain, and not all perfect. Such was the admiration in which they were held by the Romans, that some of them were performed on solemn occasions so late as the reign of Dioclesian. Both ancient and modern critics unite in their opinion of his style, which is considered a standard of the purest Latin, and of the humour of his characters, which surpasses that of all other Roman comic authors. His occasional coarseness is the most objectionable trait to a modern reader. Numerous editions of Plautus have been published; the first, edited by George Merula, was published at Venice in 1472, folio; the most esteemed of the later ones are the variorum by Gronovius, Amst. 1684, 8vo; that of Ernesti, Lipsic, 1760, 2 vols, 8vo; and of Schneider at Gottingen, 1804, 2 vols, 8vo.—*Fabricius Bibl. Lat. Voss. de Poet. Lat. Sarii Onomast.*

PLEYEL (IGNACE) a celebrated musician, who was born in Austria in 1757. He studied composition at Vienna, under Haydn, till the year 1786, when he travelled into Italy. He subsequently visited Paris, and after a short stay in that metropolis he went to Strasburg, where he had obtained the appointment of

chapel master. At length he again took up his residence at Paris, in which city he established a trade as a music seller. Previously to the French revolution he came to England, but having property in France he was obliged to return thither, and he never after quitted that country. Pleyel's beautiful melody called the German Hymn is well known and universally admired; among his instrumental compositions, which are very numerous, his Quartetto in G minor (Op. II.) is one of his happiest efforts. During the last twenty years of his life Pleyel wrote nothing, probably from a conviction that the simple charms of his music were not altogether adapted to the ears of the adorers of Beethoven and Rossini. He was a great admirer of his master Haydn, of whom he observed that he and Mozart monopolized all the genius of their age, and were among the last great masters who felt and excited feeling in others. Beethoven he allowed to be a man of first-rate talent, but on many occasions deficient in originality, copying both his great predecessors, but especially plundering Mozart. In the latter part of his life Pleyel passed much of his time in country retirement near Paris, and he died in 1832. Among the vocal pieces composed by Pleyel is an Italian opera entitled *Iphigenia*.—*Biog. Dict. of Mus. Edit.*

LOWDEN (FRANCIS) an eminent lawyer and historical writer, the brother of Charles Plowden, (see DICT.) with whom he was educated in the school of Ignatius at St Omer. He afterwards entered as a student at Lincoln's-inn, and became a barrister in the court of chancery. In 1793 he was created a doctor of civil law at Oxford, in consequence of some publications in defence of the British Constitution. In some of his later productions he took a different course, and for one of them he was prosecuted, in Ireland, at the suit of a gentleman whom he had calumniated, and who obtained a verdict against him with five thousand pounds damages. In consequence of this adjudication he thought proper to withdraw to France, and took up his residence at Paris, where he died in 1829. Besides other works he published "Jura Anglorum, the Rights of Englishmen, being an Historical and Legal Defence of the present Constitution," 1792, 8vo; "A short History of the British Empire during the last Twenty Months," 1794, 8vo; "A short History of the British Empire during the year 1794," 1795, 8vo; "Church and State, being an Inquiry into the Origin, Nature, and Extent of Ecclesiastical and Civil Authority with reference to the British Constitution," 1795, 4to; "A Treatise upon the Law of Usury and Annuities," 1796, 8vo; "The Constitution of the United Kingdom of Great Britain and Ireland, Civil and Ecclesiastical," 1802, 8vo; "An Historical Review of the State of Ireland from the Invasion of that Country under Henry II to the Close of its Union with Great Britain," 1803, 3 vols, 4to; "A Postliminious Preface to the Historical Review of the State of Ireland," 1804, 4to; "An Historical Letter

to Sir Richard Musgrave, Bart. occasioned by his *Strictures on the Historical Review*," 1805, 8vo; "The Principles and Law of Tything illustrated," 1806, royal 8vo; "Refutation of the Charge of having improvidently and maliciously advised the Prosecution in the case of the King versus Graham," 1807, 8vo; "The History of Ireland from 1172 to 1810," 1812, 5 vols, 8vo.—*Biog. Dict. of Living Authors. Edit.*

PLUMPTRE (JAMES) an episcopal clergyman and miscellaneous writer, who was the son of the Rev. Robert Plumptre, DD. president of Queen's College, Cambridge. He received his education at the school of Mr Newcome at Hackney, where he appears to have acquired a taste for the drama, in consequence of taking a share in the performance of plays under the direction of the master. He obtained much applause, as he did afterwards at a private theatre at Norwich. In 1787 he entered as a student at Queen's College, Cambridge, whence he removed to Clare Hall, where he took his first degree in 1792, and was elected a fellow in the following year. He proceeded MA. 1795, and BD. 1808; and was presented to the college living of Great Gransden, in Huntingdonshire, in 1812. His first publication was the "Coventry Act," a comedy, printed in 1793; followed by a tragedy entitled "Osway," 1795, 4to; and to his pen was also attributed "The Lakers," a comic opera, 1798. In 1818 he published a volume containing six dramas. Among the other productions of his pen are "Observations on Hamlet, and on the notions which most probably induced Shakspeare to fix upon the story of Amleth from the Danish Chronicle of Saxo Grammaticus for the plot of that tragedy, being an attempt to prove that he designed it as an indirect censure on Queen Mary of Scots;" a collection of songs, moral, sentimental, and instructive, adapted to music by Charles Hague, Mus. D. professor of music in the university of Cambridge, 3 vols, 12mo; "Four Discourses on Subjects relating to the Amusements of the Stage," 1810; "Letters to John Aikin, MD. on his volume of Vocal Poetry," 1811; "An Inquiry into the Lawfulness of the Stage," 1812; "The English Drama Purified, a selection of seventeen standard plays, in which the objectionable passages are omitted or altered," 3 vols, 12mo; and in 1820 a Letter to the Marquis of Hertford, on the subject of a dramatic institution. He wrote on the same subject in the *Gentleman's Magazine*, and also an interesting communication, pointing out the reasons for presuming that Milton was himself a performer in his *Masque of Comus*. Mr Plumptre likewise published the following sermons:—"The House of Mourning and the House of Feasting," preached before the Friendly Society of Hixton, in Cambridgeshire, where he was sequesteror, 1804; "The Plague Stayed," a scriptural view of the Pestilence, particularly of the small pox, two sermons, 1805; "The Waters of Bethesda," preached for the Mar-

gate sea-bathing infirmary, 1807; "Joseph's Consideration," preached in Clare Hall Chapel, 1808; "The Way in which we should go," preached at St Botolph's, Cambridge, 1809; "The Case of the Jews and the Samaritans," preached before the university of Cambridge, 1811; "On the Prohibition of Marriage," before the university, 1812; another delivered before the same learned body, 1813; "Three Discourses on the Animal Creation, and the Duties of Man to Animals," 1816; "The Truth of the popular notion of Apparitions or Ghosts considered by the Light of Scripture," 1818. He died Jan. 23, 1832, in the sixty-second year of his age.—*Gent. Mag. Ann. Biog.*

POLVRE (PETER) intendant of the isles of France and Bourbon, and a member of the Academy of Lyons, was born in that city in 1719. He distinguished himself by his able administration of the islands under his government, and on his return to France in 1773 his services were rewarded with the order of St Michael, and a pension of twelve thousand livres. He died in 1786, leaving numerous manuscripts, containing the result of his travels and observations, whence a selection was made, which appeared under the title of "Voyage d'un Philosophe," repeatedly reprinted.—*Biog. Univ.*

POLLOK (ROBERT) a Scotch clergyman who distinguished himself by his poetical compositions. He was born in 1799 at Eaglesham, in Renfrewshire, where his parents were employed in agriculture. Whilst a mere boy he was remarkably thoughtful, and from a very early age displayed a taste for the beauties of nature, and a capacity of enjoying them by no means common. The scenery of "Scotia's northern battlement of hills," connected as it is with many important points of national history, and associated with feelings and incidents of unusual interest, seems to have exercised an influence over him which the trials of after years failed to wear away. Being intended for the church, he was sent to the university of Glasgow, to study theology. He had hardly entered upon his professional duties when his health became seriously impaired, and so formidable were the advances of disease, that the exertion of delivering a sermon, on the 3d of May, 1827, affected him so much that he was obliged to keep his bed for several days afterwards. The means used for his relief being found ineffectual, at length a tour to Italy was resolved on, in order to try the effect of change of climate. He left Scotland in the month of August, but he had only proceeded to Southampton, when his malady increased to such a degree as precluded all hope of recovery, and his death took place at Shirley Common, near that town, September 15th 1827. His principal production is entitled "The Course of Time, a poem, in ten books," which has been strongly and perhaps justly characterised as one of the finest poems which have appeared in any language since *Paradise Lost*. Besides this work, which passed

through several large editions, Mr Pollok wrote "Ralph Gemmel, a tale for youth," and "The Persecuted Family," a narrative of the sufferings of the presbyterians in the reign of Charles II, which were reprinted when the name of the author became distinguished.—*Memoir pref. to Ralph Gemmel.*

POMMEREUL (FRANCIS RENE JOHN de) a French officer and historical writer, born at Fouguères, in 1745. He entered young into the artillery service, and under the republican government he became a general of a division, prefect of the department of the Indre and Loire, then of the North, and at length counsellor of state and director-general of the press. Being comprised in the decree of July 24, 1815, he was obliged to quit France, but he returned in 1819, and died at Paris in 1823. He published a great number of works, including "Histoire de l'Ile de Corse," 1779; and "Campagne du Général Buonaparte en Italie," 1797, 8vo.—*Annuaire Necrolog. Biog. Univ. Class.*

PONCE (PETER) a Spanish Benedictine of the monastery of St Sahagun, born at Valladolid about 1520. He is said to have been the first contriver of a method for instructing persons who are deaf and dumb. He did not himself publish any thing relative to the art which he practised; but his claim to the invention has been noticed by Francis Valles, author of Sacred Philosophy, printed at Salamanca in 1588; and by the historian Morales, in his Antiquities of Spain. Father Ponce died in 1584.—*Literary Panorama*, vol. iv.

PONS (ALOYSIO) an Italian astronomer who distinguished himself by his discoveries relating to comets. He was keeper of the cabinet of natural history belonging to the grand duchy of Tuscany, at Florence, where he died, October 14, 1831. He discovered a small comet in 1819, from his observations on which in the months of June and July, while it appeared in the constellation of the lion, he found that it has a very short period of revolution, and, unlike other comets, its orbit is an ellipsis: these important facts, which have been verified by subsequent observers, form an interesting addition to the annals of science.

—*Orig.*

PORTER (ANNA MARIA) an ingenious novel writer, born in the north of England, whence her family removed into Scotland, while she was still an infant. She received the rudiments of her education, under Mr Fulton, of Edinburgh, the author of some useful school-books. Her father, who was an officer in the British army, having died a few months after her birth, her mother quitted Scotland, and after visiting Ireland returned again to England and fixed her abode in a secluded part of London. Miss Porter displayed in childhood a creative imagination, regulated by as singular a tact for observation, which excited her active mind to narrate to her brother and sister, stories and romances in the style of the old troubadours, sometimes in verse as well as in prose. The transition was soon made to writing tales of still deeper

interest, and of more eventful incidents. The written ones were shown by her mother to her friends, whose approval, as usual, occasioned the publication of these productions, the young authoress acquiescing, though most sincerely anxious to avoid all public notice. However, such was the success of her first published essay, that several others, with her own sanction, (but never executed to her own satisfaction,) followed in regular succession and were well received by the public. While making a tour for the re-establishment of her delicate health, disordered by sorrow for the death of her mother, she stopped some time at Bristol, where, being suddenly attacked by typhus fever, she died June 21, 1832; and was interred in the church yard of St Paul's, in Portland Square, Bristol; where a monument has been erected to her memory. Miss Porter published the following works; "Artless Tales," vol. I, in 1793; "Artless Tales," vol. II, in 1795; written before the authoress was twelve years old; and she always regretted their publication. "Walsh Colville," 1797; "Octavia," 1798, 3 vols; "The Lake of Killarney," 1804, 3 vols; "A Sailor's Friendship and a Soldier's Love," 1805, 2 vols; "The Hungarian Brothers," 1807, 3 vols; "Don Sebastian; or, the House of Braganza," 1809, 4 vols; "Ballad Romances, and other Poems," 1811; "The Recluse of Norway," 1814, 4 vols; "The Village of Mariendorpt," 4 vols; "The Fast of St Magdalen," 3 vols; "Tales of Piety," (for youth); "The Knight of St John," 3 vols; "Roche Blanche," 3 vols; "Honor O Hara," 3 vols; "Tales round a Winter's Hearth," 2 vols; (in one of which is the beautiful story of "Jeannie Halliday.") "Coming Out," (a novel of modern manners,) 2 vols; "The Baron," 3 vols.—*Ann. Biog.*

PORTHAN (HENRY GABRIEL) professor of rhetoric at the university of Abo, where he was born about 1739. He became one of the most learned men which Finland ever produced; and he was admitted into the Academy of Belles Lettres at Stockholm. He published the Chronicon Episcoporum Finlandensium of Justen with Notes; "Academical Dissertations on Finnish Poetry;" "Historia Bibliothecæ Regiæ Acad. Aboensis;" besides other works. He died in 1804.—*Biog. Univ. Class.*

POTOCKI (count STANISLAUS) a Polish statesman and man of letters, born at Warsaw in 1757. Having devoted himself to politics, he was chosen nuncio to the diets in 1776, 1786, and 1788, in which station he displayed the most liberal and enlightened patriotism. On the insurrection taking place under Kosciusko, after the last partition of Poland, Potocki was arrested by order of the Austrian government, and confined eight months in the fortress of Josephstadt. Being deprived of all public employment, he devoted himself to study till the erection of Warsaw into a duchy, when he was raised to the dignities of senator-palatine, and president of the council of state

and of the ministry. He afterwards held other offices, and in 1818 was made president of the senate. He died in 1821. At his residence at Willanow, near Warsaw, he formed a grand collection of paintings, Etruscan vases, engravings, &c.; and he published a Polish translation of the works of Winkelman, preceded by a "Discourse on the State of the Arts among the Ancients." He was also the author of a treatise "On Eloquence and Style," 4 vols; a satirical romance, entitled "A Journey to Ciemnograd," 4 vols; and "Eulogies of Contemporary Great Men and Brave Poles killed at the Battle of Raszyn in 1809;" besides many works left in manuscript.—*Biog. Univ. Class.*

POWELL (Sir JOHN) a judge, a native of Gloucester, represented that city in parliament in 1685. In 1687 he was one of the justices of the Common Pleas, whence he removed to the King's Bench, but distinguishing himself at the trial of the seven bishops, James II deprived him of his office, to which he was restored at the Revolution. He was a man of sound judgment and great humour. An old woman was brought before him accused of witchcraft, and among other things it was said that she could fly: Sir John, addressing the prisoner, asked her if it was true; "Yes, my lord," was her answer; "Well then, you may, for there is no law against flying;" and accordingly he acquitted her.—*Gen. Biog. Dict.*

PRESTON (WILLIAM) an Irish gentleman, who distinguished himself by the cultivation of literature. He held the office of first commissioner of appeals, in Ireland, in which country he died in 1807. He was a member of the Royal Irish Academy, in whose transactions he published "Thoughts on Lyric Poetry, with an Ode to the Moon," 1787; and an "Essay on Ridicule, Wit, and Humour," 1788; but his literary reputation is founded on his poetical translation of the Argonautics of Apollonius Rhodius, of which it has been perhaps partially affirmed, that the work will be read and admired as long as letters and taste shall remain in the United Kingdom. A small volume of his posthumous poems was published at Dublin in 1809, 8vo.—*Aikin's Athenæum.*

PRICHARD (REES) a divine, was a native of Carmarthenshire, and was educated at St John's college, Oxford. He was vicar of Llandymodyfri, rector of Llametly, prebendary of Brecon, and chancellor of St. David's. He wrote religious poems in the Welsh language. He died in 1644.—*Wood.*

PROSPER (St) of Aquitaine, flourished in the fifth century, and was secretary to St Leo. He strenuously opposed the Semi-pelagians, and defended the doctrines of grace. He is also supposed to have been the author of the letter sent by St Leo to Flavian against the Eutychian heresy. He died about 463. His works were published at Paris, 1711, folio.—Another PROSPER, surnamed the African, lived in the same period. He wrote a treatise on the call of the Gentiles.—*Cave.*

PRUDHOMME (L—) a French bookseller, journalist, and political writer. He was born at Lyons in 1752. Leaving his native city, he settled at Meaux as a bookbinder, and a few years before the commencement of the French Revolution he removed to Paris, where he warmly adopted and extensively propagated the principles of the encyclopedists. It is said that between the commencement of 1787 and the 14th of July 1789, he had published more than fifteen hundred political pamphlets, of some of which one hundred thousand copies were thrown into circulation, and his enemies sarcastically remarked that Prudhomme wore out all the pens of all the gazetteers of Paris. In 1789 he commenced the publication of "Le Journal des Révolutions de Paris," in which he constantly assailed the government, and recommended the most violent revolutionary measures. He however opposed the tyranny of Robespierre, in consequence of which he was arrested as a royalist, but having speedily obtained his liberty, he thought proper to quit Paris. After the fall of the dictator he returned to that metropolis, where he was employed as a bookseller and an author during the remainder of his life. He died at Paris in 1830. Among his numerous publications may be mentioned his "General History of the Crimes committed during the Revolution," 6 vols, 8vo.—*Dict. des Hommes Marquans du 18me. S. Month. May.*

PUISAYE (count JOSEPH de) was descended from a noble French family, and was born at Montagne, about 1754. Being intended for the church he was educated in the seminary of St Sulpice, but preferring the military profession, at the age of eighteen he entered as a sub-lieutenant into the regiment of Conti, whence he removed as captain into a regiment of dragoons. He subsequently purchased a commission in the Cent Suisses of the royal household, obtained the brevet of colonel, and soon after the cross of St Louis. In 1789 he was nominated a deputy from the nobility of Perche to the States-general, when he joined the tiers-état, after having signed the protestation of the 19th of June; and in the Constituent Assembly he always voted with the partisans of political regeneration. In 1791 he was raised to the rank of major-general, and he had afterwards the command of the national guard of Evreux. In 1793, forces having been collected in the northern departments in order to oppose the tyranny of the jacobins, the chief command was given to general Wimpfen, and the second to count de Puisaye. Being defeated, a price was set on his head, and he was compelled to seek an asylum in Brittany. There he reorganized the Chouans, formed a military council, and arrayed the whole district in arms against the Convention. Aware of the necessity for obtaining foreign aid, the count left his troops under the command of M. Cornatin, and came to London, where he continued several months, and obtained the promise of assistance from the British ministry. He was

PUL

also invested with unlimited powers by the count d'Artois; and though on his return to France he found that M. Cornatin had concluded a treaty with the republicans, he triumphed over that difficulty, and every preparation was made by the Bretons to join the English and emigrant troops as soon as they should appear on the French coasts. Owing to some intrigues which took place, the measures of the count de Puisaye were counteracted, and the expedition was diverted to the coast of La Vendée. The disastrous expedition to Quiberon followed, for the result of which the count, whether justly or not, was generally blamed; and finding that he had lost his influence with the adherents of the exiled royal family, he resigned his commission and went to Canada, where he had obtained a grant of land from the British government. After the peace of Amiens he returned to England, and with a view to remove the odium under which he laboured, he published "*Mémoires du Lieut. Gen. le Comte de Puisaye, qui pourront servir à l'Histoire du Parti Royaliste François*," London, 1803—6, 5 vols, 8vo. He continued to reside in this country till his death, which took place December 13, 1827, in the neighbourhood of Hammersmith, Middlesex.—*Month. Mag. Biog. Nouv. des Contemp. Biog. Univ. Class.*

PUISIEUX (PHILIP FLORENT de) a French writer, born at Meaux in 1713. He became a counsellor of the parliament of Paris, but devoted himself more to the study of the belles lettres than of jurisprudence. Among the works which he published are "*Elémens des Sciences et des Arts Littéraires*;" "*Les Voyages Modernes*," 4 vols, 12mo; and several tracts on medicine and natural philosophy, translated from the English and the Italian. He died in 1792.—*Biog. Univ. Class.*

PUJOL (ALEXIS) a French physician, who was educated at Montpellier. He practised at Bedarieux, and afterwards at Castries, where he acquired great reputation. He died in 1804, aged sixty-five. He was the author of "*Dissertation sur les Maladies de la Peau, relativement à l'Etat du Foie*," 1787, 12mo; and "*Essai sur l'Inflammation Chronique des Viscères*," for which he obtained a prize medal. His works were published collectively at Castries, 1802, 4 vols, 8vo; and again in 1823, with a biographical memoir and additions.—*Ibid.*

PULZONE (SCRIPPO) a painter, was born at Gaeta in 1550, and died in 1588. He was surnamed the Roman Vandyck. His pictures are rare and greatly esteemed.—*Fitzhington.*

PYT

PUTSCHIUS (ELIAS) a learned critic, was a native of Antwerp, where he was born in 1580, and died in 1606. He published *Salust*, with notes, and "*A Collection of Ancient Grammarians*," 4to, 1605.—*Morevi.*

PYRGOTELES, a Greek artist, who was an engraver of gems in the age of Alexander the Great. The art he professed, as well as those of sculpture and painting, were carried to the highest degree of perfection among the ancients at that period. Pliny represents Pyrgoteles as one of the most eminent engravers who had then existed. Among his works are heads of Alexander and Phocion, and Hercules destroying the Hydra.—*Pliny.*

PYTCHES (JOHN) an ingenious but fanciful writer, who was born at Gazely, in Suffolk, in 1774. He possessed property in his native county, and resided for some years at Groton House, near the borough of Sudbury, which he represented in two parliaments. He first entered the House of Commons in 1802, when he opposed the address to the Crown; in 1804 he objected to the Irish Militia Bill, and voted with Mr Fox for an inquiry into the measures that had been adopted for the defence of the nation; in June that year, he spoke against Mr Pitt's "Additional Force Bill;" and in 1805 he supported the proceedings against Lord Melville. At the general election in 1806 he was again returned to parliament, but in the following year he lost his seat, after a severe contest. He published "*Speeches in the House of Commons, from 1802 to 1805*," 8vo; but his claims to notice as a literary man are founded on an ill-conceived project for innovations in our national orthography. This scheme was announced in various papers published in the Monthly Magazine, and in 1808 appeared a specimen, entitled "*A new Dictionary of the English Language*," part I, consisting of only twenty-eight pages, but affording sufficient evidence of the incapacity of the author for the task he had undertaken, and which he was therefore obliged to relinquish. Mr. Pytches died in the King's Bench prison, where he had been for some time confined for debt, in 1829.—*Wilson's Biograph. Index to the House of Commons*, 1808. *Biog. Dict. of Living Authors. Edit.*

PYTHIUS OF PRIENE, a Grecian architect, flourished 450 BC. He designed the temple of Pallas at Priene, and built the celebrated mausoleum of Artemisia in Caria, in which he was assisted by Satirus.—*Elmés's Dict. of the Fine Arts.*

QUANZ (JOHN JOACHIM) an eminent musical composer and performer on the flute, born near Göttingen in Germany, in 1697. He gave lessons on his favourite instrument to Frederick the Great, who bestowed on the musician numerous marks of his esteem. Quanz died at Potsdam in 1773. He published at Berlin, "Instructions for Playing on the Flute," 1752, 4to, which passed through many editions; and he was also the author of a "Series of Pieces for two Flutes," published in 1729. He likewise made some improvements in the construction of the flute. — *Biog. Univ.*

QUARIN (JOSEPH) first physician to the emperor Joseph II, was born at Vienna in 1733. He obtained high reputation by his exertions towards the improvement of medical education in his native country. In 1797 he was created a count; in 1808 he was decorated with the order of St Leopold; and he six times filled the office of rector of the university. He died in 1814. Among the works which he published are, "Tentamina de Cicutâ," 1761, 8vo; "Methodus Medendarum Febrium," 1772, 8vo; "Methodus Medendi Inflammationum," 1774, 8vo; and "Animadversiones Practicæ in Diversos Morbos," 1786, 8vo. Some of his writings have been translated into French. — *Biog. Univ. Class.*

QUER Y MARTINEZ (JOSEPH) a Spanish botanist, born in 1695 at Perpignan. He adopted the medical profession, and entering into the army obtained the rank of surgeon-major. Being sent abroad with the regiment to which he was attached, he made use of the opportunities afforded by his visits to the coast of Africa to collect a great number of plants and seeds, which occasioned the formation of a botanic garden. This establishment, the first of the kind in Spain, suggested the foundation of another at Madrid, under the auspices of Ferdinand VI, in 1755. Quer was appointed professor at the royal garden, where he contributed to the improvement of botany by his lectures and writings. His death took place in 1764. He published in 1762, at Madrid, the first four volumes of "Flora Española, o Historia de las Plantas que se crían en España," which work was completed by the publication of the last two volumes by Ortega, in 1784. — *Biog. Univ.*

QUETANT (FRANCIS ANTHONY) a French dramatist, born at Paris in 1733. He commenced his career as a private tutor, and afterwards successively became chief of the bureau of laws, of that of the hospitals, of prisons, and of the commission of public assistance in the department of the Seine, adjunct to the secretary of the administration of the hospitals, and comptroller of the hospital of Incurables. He died in 1823. He was the author of a great many vaudevilles, among which are, "Le Maréchal Ferrant," and "Le Tonnelier," still acted occasionally at the theatres of the Boulevards. Quetant also wrote some pieces

published in Etrennes de la Cour-Neuve for 1774. — *Biog. Univ. Class.*

QUICK (JOHN) an eminent comic actor, born in 1748, in London, where his father carried on business as a brewer. He left home to become an actor when only fourteen years of age, and commenced his career at Fulham in the character of Altamont in the Fair Penitent. After playing a variety of parts in the country, during several years, he was in 1769 engaged by Mr Foote at the Haymarket, and there he remained in obscurity till his performance of Mordecai in "Love à la Mode," which established his fame; and he soon after procured an engagement at Covent Garden. He was the original Tony Lumpkin, Bob Acres, and Isaac Mendoza, in which, and in other characters of a similar class, he was unrivalled in his day. Quick may be considered as one of the last of the Garrick school. In 1798 he quitted the stage, after having been before the public thirty-six years, and did not again appear excepting a few nights at the Lyceum after the destruction of Covent Garden Theatre. He died April 4, 1831, at Islington, where he had long resided. — *Theat. Dict. Ann. Biog.*

QUINETTE (NICHOLAS MARIE) a member of the National Convention, who before the Revolution was an attorney or notary at Soissons, his native place. He voted for the death of Louis XVI, and having been sent a commissioner to the army commanded by Dumouriez, he was one of the four deputies delivered up to the Austrians. In 1795 they were exchanged for the daughter of Louis XVI, and Quinette returning to Paris became a member of the council of Five Hundred. He was in 1799 appointed minister of the interior, and in 1800, under the consular government, made prefect of the department of the Somme. He displayed great wisdom in his administration, and after holding various offices under the imperial government, he, in 1814, gave in his adhesion to the deposition of Buonaparte, who notwithstanding nominated him commissary-extraordinary of the Somme and the Lower Seine, and a member of the chamber of peers during the hundred days. After the second abdication of Napoleon, Quinette was called by Fouché to form a part of the provisional government. Towards the close of 1815 he was banished as a regicide, when he retired to Brussels, where he died in 1821. He was the author of a "Report of the Representatives of the People, Camus, Bancal, Lamarque, Quinette, and Drouet, on their Detention, read to the Council of Five Hundred," Paris, 1796, 8vo. — *Biog. Univ. Class.*

QUIROGA (JOSEPH) a Spanish jesuit, distinguished by his labours as a missionary in South America. He was a native of Lugo in Galicia, and having studied mathematics was admitted into a naval school, and subsequently made several sea voyages before he took the habit of St Ignatius. He then went to Ame-

Q U I

rica to preach the Gospel, and also had a commission from the king of Spain to explore Terra Magellanica, and ascertain whether that country afforded any harbour fit for commercial establishments. Returning to Europe, he visited Rome to give an account of the missions of Paraguay, and he died at Bologna in 1784. He published "Tratado del Arte Verdadera de Navegar por Circulo paralelo a la Equinocial," 1784; and the journal of his travels is also extant. Many of his MSS. are preserved at Bologna.—*Ibid.*

QUIROS (PEDRO FERNANDEZ de) a celebrated Spanish navigator, born about the middle of the sixteenth century. He accompanied Mendana, as first pilot, in his second voyage in 1595; and on the death of that officer, towards the close of it, he succeeded to the command of the expedition. He afterwards went to Madrid, to solicit the patronage of Philip III to a scheme for the discovery of an antarctic continent. Having obtained a royal commission, he sailed from Callao in South America, in December 1605, with two vessels and a corvette; and after exploring Otaheite, the New Hebrides, and many other islands, subsequently visited by Wallis, Cook, and Bougainville, he returned to Mexico in

Q U I

October 1606. He again applied to the king for assistance towards the prosecution of his discoveries; but he died at Panama in 1614, while making preparations for a new voyage. A memoir which he addressed to Philip III was published in Latin at Amsterdam in 1613, and in French at Paris in 1617.—*Desbrosses Navigations aux Terres Australes. Biog. Univ.*

QUITA (DOMINGOS DOS REIS) a Portuguese poet, born January 6, 1728. He passed the early part of his life in penury, and received no instruction but what he derived from reading the works of Camoens and F.R. de Lobo. At the age of fifteen he was apprenticed to a barber, but his attachment to learning enabled him to overcome all obstacles to improvement, and at length he obtained the patronage of count San Lorenzo, and was admitted a member of the society of Arcades at Lishon. He suffered from the earthquake in 1755; but he fortunately found a protector in donna Theresa Theodora de Alvicu, the wife of a physician, in whose house he resided till his death in 1770. He was the author of five tragedies; sonnets, elegies, pastorals, &c. His best production is a tragedy, entitled "Inez de Castro." His works were published at Lishon, in 2 vols, 8vo.—*Biog. Univ. Class.*

R A C

RABOTTEAU (PETER PAUL) a French dramatist and miscellaneous writer, born at Rochelle in 1756. He was admitted, in 1788, into the Academy of Belles Lettres in that city; and nine years afterwards he settled at Paris, where he attracted some notice by his publications. Under the ministry of M. Decazes (1815—20) he was employed as sub-chief of a division of the office of police; and subsequently retiring to his native place he died there in October 1825. Among his works are "La Prise de la Bastille," an ode, 1790; "Les Jeux de l'Enfance," a poem, 1802 and 1805; and some light dramatic pieces.—*Biog. Univ. Class.*

RACK (EDMUND) a miscellaneous writer, was born of obscure parents at Ellingham in Norfolk. He was errand-boy to a draper, who educated him, and made him his apprentice. He set up for himself at Bradford, and afterwards at Bath, at which latter place he was secretary to an agricultural society of his own forming. He wrote a volume called "Mentor's Letters;" one of "Poems;" and another of "Miscellanies." He died in 1787.—*Europ. Mag.*

RACLE (LEONARD) an eminent architect, born at Dijon in France, in 1736. He acquired a knowledge of mathematics almost without a master, and was also skilled in various branches of natural philosophy. Being introduced to Voltaire, he was employed to erect the buildings which had been projected

R A D

at Ferney. Racle afterwards established near Versoix, and then at Pont-de-Vaux, a manufacture of china ware; and he was also employed in the construction of canals, and erected the first iron bridge which was seen in France. He likewise invented a kind of durable cement, susceptible of a high polish. His death took place in 1791. He published "Réflexions sur le Cours de la Rivière de l'Ain et les Moyens de le fixer," Bourg, 1790, 8vo; and he left other works in manuscript. M. Amanjon published Notice Biographique sur L. Racle, Dijon, 1810, 8vo.—*Biog. Univ. Class.*

RADLOFF (JOHN GOTTLIEB) a German writer, born in 1775 at Lauchstadt, and died at Berlin in 1825. He was professor-emeritus at the gymnasium of Bonn, and was the author of some valuable works on the early history of Germany, and on the German language.—*Rev. Encycl. Biog. Univ. Class.*

RADONVILLIERS (CLAUDE FR. LYSARDE de) a French ecclesiastic and public writer, born at Paris in 1709. He became sub-preceptor to the royal children of France, counsellor of state, and a member of the French Academy. Among his works are, "Traité sur la Manière d'apprendre les Langues," 1768, 12mo; a comedy entitled "Les Talens inutiles;" a translation of the first three books of the Æneis; and another of the Lives of Cornelius Nepos. The "Miscellaneous Works of the abbé Radonvilliers were

R A G

published at Paris in 1807, 3 vols, 8vo. His death took place in 1789.—*Biog. Univ.*

RADZIWIŁ (**NICHOLAS**) the fourth of that name, palatine of Wilna in the sixteenth century. He was descended from an ancient and noble Lithuanian family, and having distinguished himself by his valour in the war with the Teutonic knights in 1557, he was nominated governor of Livonia. Subsequently he was employed against the Russians, who had conquered Lithuania, when he completely defeated their army, and acquired the reputation of courage throughout Europe. Prince Radziwil was a zealous Protestant, and the first synod of the Polish reformers was held in his palace at Wilna in 1557. He procured the establishment of a printing-press at Brzesca, whence issued a Polish translation of the Bible, on which he expended three thousand ducats. The date of this work, copies of which are extremely rare, is 1563. Radziwil died in 1567.—**RADZIWIŁ** (**NICHOLAS CHRISTOPHER**) duke of Oeica and Nieswitz, eldest son of the preceding, was born in 1549. He abjured Lutheranism, and during a fit of sickness he made a vow to go in pilgrimage to the Holy Land, in consequence of which he took a journey thither in 1582, and returning home, in 1584 he became marshal of the court, and afterwards waiwode of Troka and of Wida. He died in 1616. His "Journey to the Holy Land," which contains curious details relative to Palestine, Egypt, and the neighbouring countries, was translated from the original Polish into Latin by Thomas Tretter, custos of the church of Warmia, and published under the title of "Ierosolymitana Peregrinatio illust. Fr. N. Ch. Radziwil," Brunsberg, 1601, folio; second edition, corrected and augmented, Antwerp, 1614, folio.—**RADZIWIŁ** (**FRANCES**) first wife of Mich. Casimir Radziwil, palatine of Wilna, in the last century, wrote several dramatic pieces, published collectively in 1751. She was also the authoress of a "Treatise on the Duties of a Christian Soldier," Wilna, 1748, 12mo; and "Instruction," for her children.—The second wife of the same prince also distinguished herself by her literary talents, and left a collection of poetical productions.—**RADZIWIŁ** (**ULRIC**, prince) grand constable of Lithuania in the eighteenth century, published a number of poems, one of which was entitled "The Miseries of Man in all Conditions of Life," 1741, 8vo.—*Zaluski Biblioth. Poetar. Polonar. Biog. Univ.*

RAFFENEL (**CLAUDE DENIS**) a French writer, born in the department of Jura about 1797. He was bred to commerce, and after having been attached to the French consulate at Smyrna, he returned home and became tutor to the sons of general Lafayette. In 1826 he went to Greece with colonel Fabvier, and was killed at the siege of Athens, January 27, 1827. Raffenel was the author of "Histoire complète des Evénemens de la Grèce depuis les premières Troubles jusqu'à ce Jour," 1825, 3 vols, 8vo, besides other works.—*Biog. Univ. Class.*

RAGHIB PACHA (**MORAMMED**) grand vizir of the Ottoman empire, was born about Aff. Biog. Dict.

R A H

1702. He manifested at an early period a decided taste for learning, which procured him the surname of Raghib, or the student. Being admitted into an office under the Turkish government, he successively filled different employments, till in 1736 he became secretary-general to the grand vizir, and the following year he was sent plenipotentiary to the congress of Niemerov, where he signed a treaty with the minister of the emperor of Germany. This mission led to his being appointed reis effendi, or secretary of state for foreign affairs. He was subsequently made a pacha of three tails, and in succession held the governments of Aidin, Aleppo, and Egypt. In 1757 he was elevated by the sultan Osman III to the dangerous post of supreme vizir, which he retained till his death in 1768. M. Chenier says, Raghib was one of the most enlightened men among the Turks in the last century, as well as the best writer. There is extant a miscellany entitled "Sefinei Raghib," The Vessel of the Studios, containing philosophical and theological dissertations, a collection of poems, a selection of remarkable words and sentences, and a collection of letters on diplomacy and administration. He had undertaken a History of China in the Turkish language, left unfinished at his death; and he was the founder of the library at Constantinople which bears his name.—*Ibid.*

RAGOIS (— le) a French ecclesiastic, who, through the influence of madame de Maintenon, was appointed preceptor to the duke of Maine, natural son of Louis XIV. For the use of that nobleman he composed his "Instruction sur l'Histoire de France et l'Histoire Romaine," 1684, 12mo, of which there are a great number of re-impressions. In 1820 M. Moustalon published a vastly improved edition of the work, augmented with an abridgement of geography, poetical history, &c. 2 vols, 12mo.—*Ibid.*

RAGUENET (**FRANCIS**) a French ecclesiastic, was a native of Rouen. In 1689 he gained a prize from the French Academy for a discourse, "Sur le Mérite et l'Utilité de Martyre." In 1704 he published "A Parallele of the Italians and French in regard to Music and the Opera," in which he gave the preference to the Italian music, and thus displeasing his countrymen, occasioned a violent controversy. He also wrote "Histoire d'Oliver Cromwell," 4to; "Histoire du Vicomte de Turenne;" "Les Monumens de Rome," 12mo; and "Histoire de l'Ancien Testament," 12mo.—*Dict. Hist.*

RAHN (**JOHN HENRY**) a Swiss physician, born at Zurich in 1749. He obtained the professorship of natural philosophy at the gymnasium in his native city; and in 1782 he became one of the founders of the Medico-surgical Institute, and he contributed to the establishment of various other scientific societies. Being created a count-palatine by the elector Charles Theodore, he was a deputy to the Helvetic National Assembly in 1799. He died in 1812, leaving many medical works, chiefly written in German.—*Biog. Univ. Class.*

R

RAM

RAHN (JOHN CONRAD) a physician of Zurich, who died in 1788 at the age of fifty-one. He was a member of the grand council of Zurich, and he belonged to the Society of Natural History in that city, to whose Transactions he was a contributor. Among his works are, "Dissertatio de Aquis Mineralibus Fabariensibus, seu Piperinis." Leyden, 1757, 4to; and a treatise on dysentery, in German.—*Ibid.*

RAIMONDI (JOHN BAPTIST) a celebrated Orientalist, born at Cremona in Italy, about 1540. He passed several years in Asia, where he acquired a knowledge of the Arabic, Armenian, Syriac, and Hebrew languages. Returning to Italy, cardinal Ferdinand de Medicis made him director of the Oriental press, whence originated the famous institution of the Propaganda. Raimondi was for a long time engaged in preparing a Polyglott Bible more complete than those of Alcalá and Antwerp, but want of funds obliged him to abandon the undertaking. He published in 1610 an Arabic Grammar, dedicated to pope Paul V. The period of his death is uncertain.—*Biog. Univ.*

RAKOUBAH, or **RAGUBAH**, peishwah, or prince-regent, of the Mahrattas, was born about the middle of the eighteenth century. He acted an important part in the events which occurred in the East Indies from 1772 to 1782. Having usurped the sovereign power, to the prejudice of his nephew, he was deposed and abandoned by all the Mahratta chiefs, when he fled to Bombay, and procured the protection of the English government. At length, peace taking place between the East India company and the Mahrattas, the cause of the peishwah was abandoned by the former, and he was allowed four months to decide on the place of his future residence. From that time he sunk into obscurity, and the date of his death is not recorded.—*Biog. Univ. Class.*

RAMBACH (FREDERIC EBERHARD) counsellor of state to the emperor of Russia, and professor in the university of Dorpat, was born at Quedlinburg in 1767, and died at Reval, where he had gone for the benefit of his health, in July 1826. He was the author of many dramatic pieces, one of which is entitled "Die Kuhpocken," The cow-pox; and of several popular works relative to polite literature.—*Neuer Nekrol. der Deutschen*, 1826.

RAMEL (JOHN PETER) a French general officer, born at Cahors in 1770. He was chief of a battalion in the army of the Pyrenees in 1794, when he incurred the hatred of the jacobins, and narrowly escaped falling a sacrifice to their vengeance. Being set at liberty after sixteen months' imprisonment, he was appointed adjutant-general, and made a campaign on the Rhine under Moreau. He valiantly defended the fortress of Kehl, of which he had the command; and in 1797 he was made commander of the guard of the two councils, under the directorial government. His conduct in this station has been the subject of much animadversion; and he was one of the victims to the revolution of the 18th of Fructidor. He

RAM

was then banished, with fifteen more persons to Cayenne, whence Ramel, Pichegru, Barthelemy, Willot, and others, made their escape in June 1798 to the Dutch colony of Surinam. Ramel thence embarked for England; and in 1799 he published "Journal sur les Faits relatifs à la Journée du 18 Fructidor, sur le Transport, le Séjour, et l'Évasion des Déportés." After the elevation of Buonaparte to power, this officer returned to France, and entering into active service made many campaigns. In 1814 he was made a major-general, and in 1815 appointed commandant of Toulouse. He retained that post after the second restoration of Louis XVIII, and he exerted himself to establish tranquillity among the inhabitants; but having endeavoured to disarm the companies of Verdets, whose existence was not authorized by the government, he became all at once the object of public displeasure. A band of ruffians having vowed his destruction, rushed into his hotel, wounded him in several places, and covered with his blood paraded the city. The unfortunate general survived this outrage two days, and died August 17, 1815, without having denounced his assassins. M. de Villele, who was then mayor of Toulouse, published a proclamation relative to this affair.—*Biog. Univ. Class.*

RAMELLI (AUGUSTIN) an ingenious mechanic and engineer, born about 1531 in the duchy of Milan. He acquired an intimate acquaintance with literature, arts, and sciences, and especially with mathematics. Having adopted the military profession, he signalled himself on several occasions in the armies of the emperor Charles V, and afterwards going to France he was well received by the duke of Anjou, who made him his engineer. That prince, who became successively king of Poland and France, continued his patronage to Ramelli, and bestowed on him a considerable pension. He died in 1590. He was the author of a rare and curious work, entitled "Le Diverse ed Artificiose Machine," consisting of 195 plates, with descriptions in Italian and French, Paris, 1588, folio.—*Ibid.*

RAMMOHUN ROY, RAJAH, a Hindoo of the Bramin caste, who became a convert to Christianity, and obtained distinction both by his writings and as a diplomatist. He was a native of the province of Bengal properly so called, and was born in the district of Burdwan, the most fertile and populous part of British India. In Lower Bengal there are two distinct classes of Bramins; namely, those who trace their descent from the indigenous priesthood of that territory, and those descended from certain emigrants from the north-west of Hindostan, who established themselves in Bengal shortly subsequent to the conquest of that country by the Mohammedans nine hundred years ago. The true Bengali Bramin is generally held in little respect, being neither esteemed for learning nor purity of blood; but those of western ancestry are highly venerated, and to this class of Bramins belonged Rammohun Roy. Considerable attention appears to have been

bestowed on his early education, for long before he had any connexion with the Europeans he was instructed at home in all the learning in which the Bramin youth are usually initiated, and was afterwards sent to the celebrated seminary of Benares, where he remained during several years engaged in the study of the Sanscrit language. His first acquaintance with the English tongue he owed to the patronage and attention of Mr John Digby, collector of the land-tax in the district of Rungpore, one of the most eastern portions of Bengal. He was at first only a clerk in the office of Mr Digby, but his merit soon raised him to the highest office that a native Hindoo can hold under the British government, that of a Dewan, or chief native superintendent. It was in this official situation that he acquired the little fortune that enabled him to become a zemindar, or proprietor. The territorial power and dignity which he thus obtained was not, however, very considerable, for as Zemindar of Hooghly, his annual income did not exceed 1000*l.* a year. In politics Rammohun Roy was a republican. At Calcutta he seldom or ever visited the government house, and kept aloof from intercourse with all the chief public functionaries. Among the Europeans his principal associates were persons belonging to the ultra-liberal party. In 1823, when the conductors of periodical journals were prosecuted at Calcutta, he boldly wrote and printed a petition to the king in council against the measures of the Anglo-Indian local government; and it is said that the tract was one of the best written which appeared on the important subject to which it related. He distinguished himself in 1820 by giving a public entertainment in honour of the revolutions which had occurred in Spain, Sardinia, and Naples, in that year. His talents procured him high reputation among his countrymen, and he was sent to England on a mission from the king of Delhi, thus becoming, in fact, an ambassador to this country from the great Mogul. That prince had by treaty a good claim against the East India Company to the extent of full half a million of money. During his entire residence in England Rammohun Roy, notwithstanding the numerous obstacles thrown in his way, carried on a negotiation for his employer with the utmost skill, firmness, and perseverance, and only a short time before his death he brought the matter to a successful termination by a compromise. According to the arrangement which he concluded the sum of 30,000*l.* is to be added to the annual stipend of the Mogul; who in consideration of the services of Rammohun Roy, gave to him and his heirs for ever a yearly sum of from 3000*l.* to 4000*l.* sterling. This is stated to have been the best bargain for the East India Company that could have been made relative to a transaction by some deemed the most discreditable to our policy of all that have occurred since the government of Clive and Hastings. An account of the case was printed, but not published, by Rammohun

Roy. It may be here mentioned, that the title of Rajah was formally bestowed on Rammohun, by the Mogul, a short time before he entered on his mission. The great Mogul, shorn as he is of power, is still the sole legitimate fountain of honour in Hindoostan, where, however, the title of rajah is as common as that of baron in Germany, or as that of count was in France before the Revolution. While Rammohun resided in England, being invested with a diplomatic character, his politics were less obtruded than in India, where he was under no such restraint; but still he never allowed an opportunity to pass without expressing his sincere and ardent approbation of all liberal institutions. The obstacles to the passing of the Reform Bill kept him in a perfect fever of anxiety; as he conceived that, independent of its own merits, Reform afforded the only chance likely to occur in his days for procuring an improved government for his countrymen in India. Rammohun Roy became a convert to Christianity before he quitted his native country. He published a treatise in English on the Doctrine of the Trinity, and is understood to have professed the principles of Unitarianism; though he usually attended the service of the Established church. He died September 28, 1833, aged about sixty. When it is considered that Rammohun Roy was in a great degree self-taught, the extent of his acquisitions must be admitted to have been remarkable. He was a thorough master of the Sanscrit language, and of the Arabic; he was an exceedingly good Persian scholar, and quoted the Persian poets liberally, appropriately, and gracefully; and of course he well understood the Hindoo and Bengali tongues. He had read a great deal of English literature, chiefly historical; and he wrote in our language with grammatical accuracy and ability; having been, as may be supposed, a better writer than he was a speaker of the language. With the view of becoming able to read the Jewish Scriptures in the original, he entered on the study of the Hebrew, his progress in which was much facilitated by his previous acquaintance with the cognate Arabic; and he is reported to have prosecuted his Hebrew studies with much success. He must on the whole be regarded rather as a clever and dexterous dialectician than as a close or profound reasoner. He was a quick and keen observer of character, and in the ordinary intercourse of life, discreet and prudent. As far as his fortune enabled him, he was liberal and generous, ready to listen to a tale of woe, and too often the victim of imposition. He was above the middle size, and his person, though not without apparent symmetry, was unwieldy and void of grace and activity. His features were large, manly, and fine; and it has been remarked that they were rather such as are oftener observed in the paintings of Italian masters than in real life in any country.—*Public Journals.*

RAMOND DE CARBONNIERES (baron LOUIS FRANCIS ELIZABETH) counsellor of
R 2

state, member of the French Institute, commandant of the legion of honour, &c. was born at Strasburgh in 1755. At the beginning of the Revolution he belonged to the royal household troops, and at that period he had acquired considerable reputation as a philosopher and geologist. In 1791 he was chosen a deputy from Paris to the Legislative Assembly, in which he was one of the most zealous defenders of the monarchical government. Being obliged to flee after the 10th of August 1792, he spent the remainder of the reign of terror in travelling amidst the Pyrenean mountains, and on his re-appearing after the fall of Robespierre, he was appointed professor of natural history at the central school of the department of the Upper Pyrenees. From 1800 to 1806 he was a member of the legislative body, and he subsequently obtained the prefecture of Puy-de-Dome. On the restoration of the king he was made master of requests in ordinary, August 1815; and counsellor of state extraordinary in 1818. His death took place May 14, 1827. M. Ramond translated Coxes's Travels in Switzerland; and published "Observations faites dans les Pyrénées," 1789, 2 vols, 8vo; "Opinions sur les Lois Constitutionnelles," 1791, 8vo; "Voyage au Mont Perdu," 1801, 8vo; and "Mémoire sur la Formule Barométrique de la Mécanique Céleste," 1812, 4to.—*Rev. Encycl. Biog. Univ. Class.*

RANTZAU (HENRY) a native of Holstein, born in 1526. He accompanied Charles V to the siege of Metz, was appointed governor of Holstein, and was not only a patron of literary men, but was also himself the author of several works, some of which, however, relate to the worthless though once fashionable subject of astrology. Among his other productions are "Genealogia Ranzoviana," Hamburg, 1585, 4to; "Historia Belli Dithmarsici," published under the name of Chr. Ciliclus, Basil, 1570; "Commentarius Bellicus, libris VI distinctus," Frankf. 1595, 4to; besides Latin epigrams and other poems. He died in 1598.—*Biog. Univ. Class.* There was another **HENRY DE RANTZAU**, who wrote an account of his travels to Jerusalem, Egypt, and Constantinople, published at Copenhagen, 1669, 4to, in the Danish language, and of which a German translation appeared at Hamburg, 1704, 8vo. He died in 1672, at the age of seventy-six.—*Moreri.*

RANTZAU (JOSIAH, count de) marshal in the French service, was born in the duchy of Holstein at the beginning of the sixteenth century. He was descended from an ancient and illustrious family, and entered when young into the Swedish army. In 1635 he went to France with the chancellor Oxenstiern; and the king, Louis XIII, being pleased by his agreeable manners, made him a major-general, and gave him the command of two regiments. Being employed in the army which invaded Franche-Comté, he lost an eye at the siege of Dôle; and he defended St Jean de Lône against Galas, whom he forced to retreat. Subsequently he served under the duke of Orleans and the

duke d'Enghien (afterwards the great Condé) in Germany and Flanders, where he lost a leg and was wounded in the hand. In 1645 he took Gravelines, and the same year was made a marshal of France, after having promised to abjure Lutheranism. He was made governor of Dunkirk in 1646, and he captured Dixmude and Lens, and completed the conquest of Flanders. Becoming an object of suspicion to cardinal Mazarin, he was confined eleven months in the Bastille, and died soon after his liberation in 1650. There is extant a Relation de ce qui s'est passé à la Mort de Josias, Comte de Rantzau, Paris, 1650, 4to. He was so mutilated in the course of his various campaigns, that he had at last only one eye, one ear, one arm, and one leg.—*Biog. Univ.*

RAOUL DE CAEN, so called from the place of his birth, was an historical writer of the eleventh century. He followed the celebrated Tancred to Palestine in the first crusade in 1096, and described the exploits of that hero in a work entitled "Gestes de Tancrede." Father Martene published this piece in the third volume of his Anecdotes: it has since appeared in the great collection of Muratori; and more recently in M. Guizot's Mémoires relatifs à l'Histoire de France. Raoul is supposed to have died about the year 1115.—*Biog. Univ. Class.*

RASORI (JOHN) an eminent Italian physician, born at Parma in 1767. He studied medicine at Florence, Pavia, and in England, where he adopted the Brunonian system, and on his return home he published a translation of the works of Dr Brown. He became professor of pathology at Pavia, but was obliged to resign that office on account of his political opinions. On the entrance of the French into Italy in 1796 Dr Rasori went to Milan, where he published a journal entitled "L'Amico della Libertà e dell' Uguaglianza." He was made secretary to the minister of the interior of the Cisalpine republic, which employment he was forced to resign in 1797; and he then returned to Pavia, where he was professor of the practice of medicine. He afterwards removed to Milan, and when the Austro-Russian army entered the Milanese in 1799 he took refuge at Genoa, where Massena then held the command. After the battle of Marengo he again went to Milan, and obtained the places of first physician to the government, chief of the military hospital, and professor of clinical medicine at the hospital of the Santa Corona. From these offices he was removed by the minister of the interior of the kingdom of Italy. Towards the end of 1814 he was arrested as an accomplice in the conspiracy of the Carbonari, and confined in the citadel of Mantua, whence he was released two years after, and he died in 1823. Besides the works of Dr Brown, he translated Darwin's Zoonomia, and was the author of "Storia della Febbre Petechiale di Genova," 1803, 8vo, and various other publications.—*Ibid.*

RASSICOD (STEPHEN) a counsellor of the parliament at Paris, who died at that city in

1718. He devoted himself at first to the study of the ancient languages and the belles lettres, but he afterwards applied himself particularly to jurisprudence. He was the author of, "Notes sur le Concile de Trente," with a dissertation on the authority and reception of that council in France, Paris, 1706, 8vo; and he was one of the contributors to the *Journal des Savans*.—*Camusat' Hist. Crit. des Journaux. Biog. Univ. Class.*

RAS-WELLETA-SELASSE, or RAS-WALDER-SERLASSEY, principal minister or viceroy of Tigré in Abyssinia. He was born about 1746, and died in 1816. He distinguished himself among his half-civilized contemporaries by the extent of his views, his wisdom, and his generosity. Many interesting details relative to the African statesman are to be found in the *Abyssinian Travels* of Bruce, who visited Africa during the period when the Ras held the reins of government.—*Salt's Travels in Abyssinia. Biog. Univ. Class.*

RAULIN (JOHN) a celebrated French preacher of the fifteenth century. He was born at Toul in 1443, became a Cluniac monk in 1497, and died at Paris in 1514. His works, which were collected and published at Antwerp in 1612, 6 vols, 4to, comprise a Commentary on the Logic of Aristotle; Letters; and Sermons. La Fontaine has borrowed from Raulin the subject of his beautiful fable entitled *Animaux Malades de la Peste*; and Rabelais has adopted part of an historiette of this author in chap. ix. and xxvii. of his *Pantagruel*.—*Biog. Univ.*

RAULIN (JOSEPH) an eminent physician, born in the diocese of Auch in 1708. He engaged in the practice of his profession at Nérac, where his merit was not sufficiently appreciated; but the president de Montesquieu having induced him to remove to Paris, he there acquired great reputation, was loaded with honours, and employed by the government in the composition of various medical works. He died in 1784. Among his principal productions are, "Traité des Maladies occasionnées par les promptes Variations de l'Air," 1752, 12mo; "Traité des Maladies occasionnées par les Excès de Chaleur, de Froid, &c." 1756, 12mo; "Traité des Affections Vapoureuses du Sexe," 1759, 12mo; "De la Conservation des Enfants," 1768, 2 vols, 12mo; and "Traité de la Phthisie Pulmonaire," 1784, 8vo.—*Biog. Univ. Class.*

RAVAILLAC (FRANÇOIS) a fanatical assassin, the murderer of Henry IV of France. He was born at Angoulême in 1578 or 1579. Having been ruined by a lawsuit, he was for a long time confined in prison for debt, and it was during his captivity that he became the subject of those mental hallucinations which impelled him to the insane and atrocious act which he ultimately committed. Regarding the king as the protector of the Huguenots, he became possessed with a furious rage against him; and after a journey from Angoulême to Paris, with an intention, according to his own account, to remonstrate with the king against his opposition to the pope, which pur-

pose he was prevented from executing, Ravallac made a second journey to Paris, when he committed the crime which renders him an object of historical notoriety. On the 14th of May, 1610, he went to the Louvre, whence he followed the royal carriage to the rue de la Ferrière, and it being stopped by some obstruction in the street, he mounted the coach wheel, and thrusting his hand in at the window, armed with a knife, stabbed the king to the heart. The assassin made no attempt to escape, and being seized and interrogated, declared that he had no accomplice, in which assertion he persisted under the torture. He was executed May 27, when, after undergoing various other inflictions, his limbs were torn asunder by horses.—*Sully's Memoirs. Biog. Univ.*

RAVRIO (ANTOINE ANDRÉ) a famous manufacturer of gilt bronzes, born in 1759 at Paris, where he died in 1814. He united great skill in the art he professed with considerable knowledge of various sciences, and he consecrated his leisure to poetry and literature. Ravrio was a member of the academical society of the Children of Apollo, and of the societies of Arts and of Friendship. He printed for his friends a collection of pieces entitled "Mes Délassements, ou Recueil de Chançons," 1810—12, 2 vols, 8vo; and he was also the author of "Arlequin Journaliste," and other dramatic productions.—*Biog. Univ. Class.*

RAWDON HASTINGS (FRANCIS) marquis of Hastings, earl of Rawdon, &c. was the son of John, baron Rawdon, and earl of Moira, of the kingdom of Ireland, and was born December 7, 1754. He was educated at Oxford, and after a short tour on the continent he entered into the army in 1771 as an ensign in the 15th regiment of foot. Having obtained a lieutenancy, he embarked for America in 1773, and he was present at the battle of Bunker's-hill. After having served in other engagements, he was nominated in 1778 adjutant-general of the British army in America, with the rank of lieutenant-colonel. He next commanded a distinct corps in South Carolina, where he successfully opposed general Gates; and at the battle of Camden, on the 16th of August, 1780, lord Rawdon commanded one wing of the army under lord Cornwallis. He subsequently defeated general Green; but the surrender of lord Cornwallis's army, and the declining state of British affairs, put a period to his exertions. A severe and dangerous illness, however, obliged him to quit the army before the conclusion of hostilities. He embarked for England, and the vessel which carried him was captured and taken to Brest; but he was immediately released, and returning home was made aide-de-camp to the king, and created an English peer by the title of baron Rawdon. He distinguished himself both in the English and Irish parliaments, particularly in the former, in the debates relative to the bill for the relief of persons imprisoned for small debts. In June 1793 he succeeded his father as earl of Moira,

and the same year he was advanced to the rank of a major-general. In the summer of 1794 he was sent with a reinforcement of ten thousand men to join the duke of York, opposed to the French in Holland. In 1797 an attempt was made to place him at the head of the ministry; but the scheme did not succeed. When the whigs, with whom he had acted, came into power in 1806, he was appointed master-general of the ordnance, which post he resigned on the fall of his party. He was engaged subsequently in political negotiations, which proved abortive; and in 1812, as he could not act with the administration then in power, he obtained the appointment of governor-general of British India. In 1816 he was created viscount Loudoun, earl of Rawdon, and marquis of Hastings; and he twice received the thanks of the East India company, and of the houses of parliament, for his able services in the Indies. He returned to England in 1822, when he was succeeded by lord Amherst. In March, 1824, he was nominated governor of Malta, where he resided till near the time of his death, which occurred November 28, 1825, on board his majesty's ship *Revenge*, in Baia bay, near Naples. The later years of the life of this conspicuous nobleman were clouded by the consequences of his profuse liberality and generous hospitality, particularly to the French emigrant noblesse. Unhappily, as is usually the case with men of uncalculating generosity both with regard to themselves and connexions, the permanent evil in the sequel is sure to exceed the temporary good. The marquis of Hastings endured much himself; others have encountered ruin and broken hearts.—*Ann. Biog.*

RAWSON (Sir WILLIAM) a celebrated oculist, whose family name was Adams. He was a native of Cornwall, and was apprenticed to an eminent surgeon at Barnstaple, in Devonshire, after which he became the pupil of his distinguished countryman J. Cunningham Saunders, who had successfully devoted his attention to the cure of diseases of the eyes, and especially cataract. Mr Adams adopted the same department of professional practice; he established the West of England Institution for Diseases of the Eye, at Exeter, to which he was appointed oculist; and another institution at Bath, where he performed several successful operations, and obtained high reputation. After the death of Mr Saunders in 1810, he succeeded him in practice, and having removed to the metropolis, he became a member of the Royal College of Surgeons; and he obtained the offices of Oculist Extraordinary to the Prince Regent, and Oculist in ordinary to the dukes of Kent and Sussex. He displayed his skill in the treatment of some pensioners of Greenwich Hospital, and his success in restoring sight to several patients who had been totally blind was made the subject of an official report, and he received the honour of knighthood; an attempt was also made to procure for him a pecuniary grant from parliament, but it was abandoned on the ground of his not having been the

inventor of the curative operations which he practised with so much advantage. This gentleman, who took the name of Rawson, in consequence of the will of a person from whom he derived a bequest of property, died in 1829. He was the author of "*Observations on Ectropium, or Eversion of the Eye-lids*," 1812, 8vo.—*Biog. Dict. of Living Authors.*

RAY DE ST GENIEZ (JACQUES MARIE) a French writer on military affairs, born at St Geniez in 1712. He served with distinction in the wars in Italy and Germany, and died in 1777. His works are "*L'Art de la Guerre Pratique*," 1754, 2 vols, 12mo; "*Histoire Militaire de Louis XIII.*" 1756, 2 vols, 12mo; "*Histoire Militaire de Louis le Grand*," 1755, 3 vols, 12mo; "*L'Officier Partisan*," 1763—66, 2 vols, 12mo; "*Stratagemes de Guerre des Français*," 1769, 6 vols, 12mo.—*Biog. Univ. Class.*

RAYNAL (JOHN) a French writer, born at Toulouse in 1723. He exercised the functions of capitoul of that city, and those of sub-delegate of the intendant of Languedoc; and he became a member of the Academy of Sciences, Inscriptions, and Belles Lettres at Toulouse. He published in 1759 "*Histoire de la Ville de Toulouse, avec une Notice des Hommes illustres, une Suite Chronologique des Evêques et Archevêques de cette Ville, et une Table Générale des Capitouls depuis la Réunion du Comté de Toulouse jusqu'à présent*," 4to. He died at Argilliers in 1807.—*Biog. Univ. Class.*

REAL DE CURBAN (GASPAR de) grand seneschal of Forcalquier, was born at Sisteron in 1682, and died at Paris in 1752. He was one of the most enlightened politicians of his time, and was the author of a work entitled "*La Science du Gouvernement, Ouvrage de Morale, de Droit, et de Politique, qui contient les Principes du Commandement et de l'Obeissance, &c.*" 1751—64, 8 vols, 4to.—**REAL DE CURBAN** (BALHAZAR de) nephew of the preceding, known under the title of the abbé de Burle, was born at Sisteron in 1701, and died at Paris in 1774. He published a "*Dissertation sur le Nom de Famille de l'Auguste Maison de France*," Paris, 1762, 4to, reprinted in a collection of tracts on the same subject, Amsterdam, 1769.—*Ibid.*

REBOLLEDO (BERNARDIN, count de) a Spanish writer, born at Leon in 1597. He was descended from an illustrious family, and entering into the army he was created a count of the empire, and made governor of the lower palatinate, captain-general of the artillery in Germany, and ambassador of the king of Spain in Denmark, in which last station he rendered important services to his native country. He died at Madrid in 1677, leaving the reputation of having been a good soldier, a skilful negotiator, and a distinguished author. His works are "*Selvas Militares y Politicas*;" "*Selvas Danicas*;" "*Selvas Sagradas*;" "*La Constancia victoriosa, Egloga sacra, y los Trenos*;" and "*Ocios*." The best edition of the poetical productions of count Rebolloredo is that of Madrid, 1778, 4 vols, 8vo.—*Ibid.*

REG

REGA (**HENRY JOSEPH**) doctor and professor of medicine at Louvaine, was born in that city in 1690. He distinguished himself not only by his talents, but also by the zeal with which he consecrated both his time and his fortune to the consolation of those who were afflicted with disease. He was nominated medical counsellor to the arch-duchess Mary Elizabeth, governess of the Netherlands; and he died in 1754, having bequeathed a part of his property for the education of students of medicine, and the augmentation of the library of the university. He was the author of a treatise, "*De Sympathia, seu de Consensu Partium Corporis Humani*," Haerlem, 1721, 12mo, besides other works.—*Ibid.*

REGIS (**JOHN BAPTIST**) a French jesuit, who went as a missionary to China. He was born in the latter part of the seventeenth century, but the time of his death is uncertain. He was distinguished for his skill as a geographer, and was employed with many of his brethren in the construction of a general map of China. A favourable opinion of his talents may be formed from the details which he furnished to father Duhalde for his Description of China. He likewise translated in Latin, with learned notes and illustrations, the Chinese treatise entitled *I-King*, of which there is a copy in the royal library at Paris. Father Regis took part in the discussions of the missionaries with the emperor Young-tching in 1724, concerning the proscription of the Christian religion in China.—*Biog. Univ. Class.*

REGNAULT (**MICHAEL LOUIS STEPHEN**) a French statesman, born at St Jean d'Angeli in 1760. He adopted the profession of an advocate, and became lieutenant of the presidency of the marine at Rochefort. Having distinguished himself at the bar, he was chosen a deputy to the States-general from the tiers-état of the country of Aunis. He became the editor of a daily paper, called "*Journal de Versailles*;" and when the Constituent Assembly removed to Paris, he supplied notes of its proceedings for a paper entitled *Postillon par Calais*. Being proscribed after the 10th of August, 1792, he fled from Paris, and being discovered and arrested at Douai, he did not obtain his liberty till after the fall of Robespierre. He was subsequently employed in the army of Italy, where he became known and attached to Buonaparte; and he was one of those who contributed to bring about the revolution of the 18th of Brumaire, 1799. Successively appointed counsellor of state, secretary of state to the imperial family, count of the empire, and attorney-general in the superior court, he acquitted himself of his different functions with great ability. On the opening of the Russian campaign he foresaw the fall of Napoleon, to whose interests, notwithstanding, he continued faithful to the last. He followed Maria Louisa to Blois; and when Napoleon returned from Elba he again appeared on the scene. After the battle of Waterloo he pleaded for the resignation of Buonaparte in favour of his son; and his proposition being rejected, he quitted France for

REH

America. Having obtained permission to return home after four years' exile, he landed in his native country in the last stage of sickness, and died a few hours subsequent to his arrival, March 10, 1819. Besides the works already mentioned, he assisted in the *Journal de Paris*, and in the *Ami des Patriotes*, 1791, 4 vols, 8vo.—*Biog. Nouv. des Contemp. Biog. Univ. Class.*

REGNIER (**CLAUDE AMBROSE**) duke of Massa, minister of justice under the government of Napoleon. He was born at Blamont, in the department of La Meurthe, in 1736; and at the beginning of the Revolution he exercised with success the profession of an advocate at Nanci. He adopted popular principles, was nominated a deputy to the States-general, and afterwards to the Constituent Assembly, in which he chiefly devoted his attention to matters of judicature and administration. Having escaped from the prescription of the 10th of August, he lived in obscurity during the reign of terror, and again appeared on the political stage after the fall of Robespierre. He then became a member of the Council of Ancients, and took an active part in several public measures. He was one of those who assisted in the elevation of Buonaparte, and on the establishment of the consulate he was made a member of the council of state in the section of finance; and in 1802 he was appointed grand judge, minister of justice, and charged with the direction of the general police. In 1813 he resigned his office to become president of the legislative body, in which post he continued till the abdication of Buonaparte, in whose reverse of fortune he was associated. The duke of Massa died June 24, 1814.—*Biog. Nouv. des Contemp. Dict. des H. M. du 18me S. Biog. Univ. Class.*

REGNIER (**EDMUND**) keeper of the central museum of the artillery, an honorary member of the consulting committee of arts, comptroller-in-chief of the arms of the national guard, and member of many scientific associations, was born at Semur in 1751. He commenced his studies at the college of his native place, but the narrow circumstances of his widowed mother occasioned his being apprenticed to a gun-smith at Dijon, in which station he greatly distinguished himself, and became highly skilful in his profession. He was the first who erected lightning-conductors in Burgundy, and he was the author of many ingenious inventions. He died at Paris in June, 1825. An account of his researches was published in "*Mém. explicat. du Dynamomètre et autres Machines inventées par le Citoyen Regnier*," 1798, 4to.—*Ann. Nécrolog. Biog. Univ. Class.*

REHFELD (**CHARLES FREDERICK**) a Lutheran clergyman, born in 1735 at Stralsund, in Pomerania. He relinquished the ministry to devote himself to the profession of medicine, and having taken the degree of doctor in 1756, he practised as a physician at his native place, and afterwards at Gripswald, where he obtained the medical chair, which he filled during sixteen years. In 1780 he was made

director of the college of health in Swedish Pomerania, and twelve years after appointed first physician to the king. He died in 1794, leaving a number of academical dissertations and other works, among which may be specified "Programma de Partibus constitutibus Humorum nostrorum," 1766, 4to; "Morbis sing. Epileptico-cataleptici Opio potius. sanati Hist." 1788, 8vo.—*Biog. Univ. Class.*

REICHARD (JOHN JAMES) a German naturalist, who was born at Frankfort on the Maine in 1743, and died in 1782. He studied medicine at Gottingen, and became director of the botanic garden at his native place. He was the author of "Flora Meno-Francofurtana," 1772—78, 2 vols, 8vo; and he published an edition of the *Species Plantarum* of Linnæus, and *Sylloge Opusculorum Botanico-rum cum adjectis Annotationibus*, 1782, 8vo.—*Ibid.*

REICHARDT (CHRISTIAN) a writer on agriculture, born at Erfurt in 1685. He published a number of works relating to husbandry and rural economy in the German language, the most important of which is his "Science of Agriculture and Gardening," Erfurt, 1753—74, 6 vols, 8vo, republished by J. V. Sikler, 1802—3, 3 vols, 8vo. His death took place in 1775.—*Ibid.*

REICHARDT (JOHN FREDERIC) a musician, composer, and author, who was a corresponding member of the French Institute. He was born at Königsberg in 1752, and died in 1814. He was for a long time director of the Italian opera at Berlin; and he had, at length, the direction of the French and German theatres at Cassel. Among his musical compositions are the "Tamerlane" of Morel, and the "Panthea" of Berquin. His literary productions are "Familiar Letters, written during a Journey in France in 1792," 2 vols, 8vo; "New Familiar Letters during a Journey in France in 1803 and 1804," 3 vols, 8vo; "Familiar Letters on Vienna," &c. In 1804 and 1805 he was conductor of the *Musical Gazette* of Berlin.—*Ibid.*

REINEGGS (JAMES) a German traveller and adventurer, born in 1744, who was the son of a barber at Isleben, in Saxony, named Ehlich. He at first followed his father's employment, but at length quitted his native country, and became successively a journeyman barber, a student of medicine at Leipsic, a theatrical performer at Vienna, a physician in Georgia, and favourite of prince Heraclius, who raised him to the rank of a bey, and had his name inscribed in letters of gold on the foundery near Teflis. Reineggs acquired a title to these honours by spreading among the Georgians the knowledge he had gained in Europe. He improved the manufacture of gunpowder and the casting of cannon; and he erected a printing-press, where he had printed the *Principles of Political Economy* of his countryman Sonnenfels, which he translated into Persian, whence a Georgian version was made. But after having conferred so many benefits on the country in which he had found an honourable asylum, Reineggs was induced

to sacrifice its interests to his own ambition: being sent by Heraclius as a negotiator to the court of Catherine II, he became the secret agent of that princess, and thus contributed to destroy the independence of Georgia. As the reward of his treachery he was made counsellor of the imperial college, director of the students in surgery, and perpetual secretary of the imperial college of medicine at Petersburg, where he died in 1793. He was the author of a "History of Georgia," published by the celebrated traveller Pallas in the second volume of his *Nordische Beytrage*; and a "Topographical and Historical Description of the Caucasus," found among his papers after his death, was published by Schroeder, Gotha, 1796, 2 vols, 8vo.—*Ibid.*

REINHOLD (CHARLES LEONARD) a German metaphysician, born at Vienna in 1758. He studied among the jesuits, and was engaged in his novitiate when their order was suppressed in 1773. He then entered among the Barnabites, and became professor of philosophy. He formed an acquaintance with many of the German literati, and was a contributor to a philosophical journal published at Vienna, connexions which probably led to his renouncing his profession, and removing to Leipsic, where he published "An Apology for the Reformation," 1783. He afterwards settled at Weimar, and married the daughter of the celebrated Wieland, in conjunction with whom he edited *The Mercury*, a periodical journal. He occupied for a time the chair of philosophy at Jena, which he quitted in 1794 to become attached to the university of Kiel, where he died in 1823. His son, professor of philosophy at Jena, published an interesting account of his life and literary labours, 1825, 8vo. Besides other works, he wrote "An Essay to conciliate the Discussions of Philosophers;" and "Letters on the Philosophy of Kant," of which he was an enthusiastic admirer.—*Ibid.*

REMER (JULIUS AUGUSTUS) an eminent German writer, born at Brunswick in 1736. He obtained the professorship of history at Helmstadt, which he held with great reputation for seventeen years, and died in 1804. Among his principal works are, "A Manual of Universal History," Brunswick, 1783—4, 3 vols, 8vo; "A Book for Teaching Universal History," Halle, 1800, continued by Voigtel to 1810; "A View of Society in Europe to the Commencement of the Sixteenth Century," 1792; and "A Manual of the Politics of the Principal European States," 1786.—*Zopf. Univ. Hist. Biog. Univ. Class.*

REMUSAT (ABEL) a learned French writer, who distinguished himself as one of the most zealous and successful investigators of the language and literature of the Chinese in the nineteenth century. He held the office of keeper of the Oriental MSS. in the Royal Library at Paris; and in 1814 when a Chinese professorship was established in the Collège de France, he immediately obtained the appointment. In 1811 he published an "Essay on the Language and Literature of

China;" and subsequently "Iu-Kiao-Li, ou les Deux Cousines, Roman Chinois, traduit en Franc.: précédé d'une Préface où se trouve un Parallèle des Romans de la Chine et de ceux de l'Europe," Paris, 4 vols, 12mo; besides which he edited "Contes Chinois," 3 vols, consisting of tales translated by Father d'Entrecolles and others, which had been published in English by Mr Davies and Mr Thoms, of the E. I. C. service, Canton. M. Remusat had a great share in the establishment of the "Universel," one of the journals which were suppressed in 1830, an occurrence which occasioned him much vexation. He died at Paris, in consequence of a cancer in the stomach, June 2, 1832, in the sixty-fourth year of his age. He had a seat in the French Institute, now the Academy of Sciences.—*Biog. Nouv. des Contemp. Edit.*

RENNEL (JOHN) a military officer, distinguished for his researches concerning ancient geography. He was born in 1742, at Chudleigh, in Devonshire, where his father had a small estate. After being educated at a grammar school, he entered into the navy at the age of 15, and was present at the siege of Pondicherry, where he gave proofs of enterprise and ability. At the age of 24 he quitted the navy for the army, and was sent to the East Indies, where he served as an officer of engineers. He there greatly distinguished himself, and being favourably noticed by the government he was promoted to a majority, which was the highest rank he ever attained. While thus employed he first attracted notice as a man of science, by the publication of a Chart of the Bank and Current of Cape Lagullas, which procured him the appointment of Surveyor-general of Bengal. He soon after published his Bengal Atlas, and an "Account of the Ganges and Burrampooter Rivers," which last appeared in the Philosophical Transactions. While in India, he married one of the daughters of Dr Thackeray, formerly head master of Harrow school, and returning to England about 1782, he soon obtained the notice of many of the most eminent men of his day; and he was elected a member of the Royal Society. From this period he held an extensive correspondence with men of learning both at home and abroad. He now published his celebrated Memoir of a Map of Hindostan; and he assisted in the formation of the Asiatic Society, to whose publications he was a contributor. He aided the celebrated traveller Mungo Park, in preparing for the press the account of his discoveries in the interior of Africa, which was published in 1798; and he illustrated the work by a most useful map of the country. He also greatly promoted the objects of the African Society, by correcting the geography of that part of the globe. In 1800 appeared his principal work, "The Geographical System of Herodotus explained," 4to; and in 1814 he produced another work of extraordinary interest, curiosity, and research, entitled "Observations on the Topography of the Plain of Troy," 4to. Major

Rennel died March 29th, 1830, after many weeks of severe suffering occasioned by a fracture of the thigh. Besides the works already mentioned, he published a "Memoir on the Geography of Africa, with an adjoined Map," 1790, 4to; "The Marches of the British Armies in the Peninsula of India, during the Campaigns of 1790 and 1791, illustrated and explained by a Map," 1792, 8vo; "Second and Third Memoirs on the Geography of Africa," 1798; and subsequently a "Fourth Memoir on African Geography."—*Month. Mag.*

RESENDE (LUCIUS ANDREW) the restorer of literature in Portugal, was born at Evora in 1498. He embraced the ecclesiastical profession, and applied himself with great success to the study of languages, ancient literature, and theology. He afterwards travelled, and on his return to Portugal he became governor to the royal infants, and opened a school for general instruction, whence issued some great and learned writers. Resende died in 1573. He left many historical pieces, which are highly esteemed, and also poems. His works were published collectively at Cologne, 1600, 2 vols, 8vo; and his "Vida do Infante D. Duarte," was printed at Lisbon in 1789, 8vo.—*Biog. Univ.*

RETZIUS (ANDERS JAHAN) professor of natural history and chemistry at the university of Lund in Sweden. He was born at Christianstadt in 1742, and devoting himself to the study of the natural and physical sciences, he attained great reputation, especially as a botanist. Retzius was a member of thirty-one learned associations, and he founded at Lund a Physiographical Society. His death took place in 1821. Among his publications may be mentioned, "Observationes Botanicae, sex Fasciculis comprehensae," Leips. 1779—91, folio, with coloured plates.—*Mem. of Royal Academy of Stockholm, 1822. Biog. Univ. Class.*

REVELLIERE-LEPAUX (LOUIS MARIE) one of the members of the French executive directory, was born in 1753, at Montaigu in La Vendée. He was educated for the bar, and in 1775 admitted a counsellor of the parliament of Paris; but he relinquished his profession, and applied himself to the study of botany, on which he delivered lectures at Angers. The Revolution taking place, he displayed great ardour in support of popular opinions, and was chosen a deputy to the States-general, and afterwards a member of the National Convention. He assisted in the formation of a republican club, and the publication of a journal, in which he advanced his own peculiar opinions. It was he who, by way of reprisals against the manifesto of the duke of Brunswick, procured the decree of the Convention, purporting "that the French nation would give assistance to all oppressed people who wished to recover their liberty." He voted for the death of the king, and against the appeal to the people. He afterwards opposed Danton, and in vain defended the proscribed Girondists. He was obliged himself to seek for safety in conceal-

ment, but after the overthrow of Robespierre he returned to Paris. In March, 1795, he resumed his seat in the Convention, and his first act was to oppose the outlawry of the former president of the committee of public safety, by whom he had been recently proscribed. After other employments, he became a member of the Directory, in which sovereign council his influence was not very considerable; and after the events of the 30th of Prairial he gave in his resignation, and retired to private life. On the creation of the Institute he was nominated a member of the class of moral and political sciences. He read before that assembly "Réflexions sur le Culte, les Cérémonies Civiles, et les Fêtes Nationales," in which he advocated the principles of theophilanthropy; and he was regarded as the high-priest of that once prevalent mode of religion. He refused to take the oath of fidelity to Buonaparte required from the members of the Institute, and retired to the neighbourhood of Orleans, where he lived for some time in obscurity, and afterwards returned to Paris. He died March 27, 1824. He dictated to his son "Memoirs of his Life," to be published at some future period after his death; and he was the author of several tracts, besides his "Reflections on Public Worship," already noticed.—*Annuaire Nécrol. Dict. des H. M. du 18me S. Biog. Univ. Class.*

REYNIER (JEAN LOUIS ANTOINE) a naturalist and writer on agriculture, brother of general Reynier.—(See *Dict.* vol. ii.)—He was born at Lausanne in 1762. After travelling in Holland and various parts of France, he settled on an estate in the Nivernais, which he quitted to join his brother in Egypt, where he obtained a civil employment. After the return of Buonaparte to France, Reynier was called by general Kleber to the committee of administration, and under Menou he was charged with the direction of the finances. Joseph Buonaparte, when governing in Italy, made him commissary-royal in Calabria, and Murat afterwards employed him as superintendent-general of the posts in the kingdom of Naples. The events of 1814 having deprived him of all his functions, he went and settled in the canton de Vaud, where he accepted the direction of the posts, devoting his intervals of leisure to scientific pursuits. He died at Lausanne in 1824. He was a contributor to the *Encyclopédie Méthodique*, and to various periodical journals; besides which he published "Du Feu et de quelqu'un de ses principaux Effets," 8vo; "Guide du Voyageur en Suisse," 12mo; "Précis d'une Collection des Médailles Antiques," 8vo; and "Traité de l'Economie Publique et Rurale de plusieurs Peuples Antiques."—*Biog. Univ. Class.*

RHEEDE (HENRY ADRIAN DRAAKENSTEIN van) Dutch governor of the coast of Malabar in the seventeenth century. He collected and procured paintings and drawings at his own expense of the most curious plants in that part of the world where he resided. The immense collection which he formed was

published at Amsterdam, 1678—1703, in 12 vols. folio, under the title of "Hortus Malabaricus," with 794 plates. Gaspar Commelin made a table for the whole work, under the title of *Flora Malabarica*; and Sir John Hill translated the first volume into English. The period of the death of governor van Rheede is not recorded.—*Ibid.*

RHEITA (ANTOINE MARIE SCHYRLÉ de) a capuchin friar, distinguished as a mathematician and astronomer, who was born in Bohemia towards the end of the sixteenth century. He made some improvements in the construction of telescopes; and he fancied that he had discovered five new satellites of Jupiter, but with regard to the latter he was mistaken. He died at Ravenna in 1660. Among his works are, "Oculus Enoch et Eliæ, sive Radius sidereo-mysticus," Antwerp, 1645, folio; and "Fasciculus Sacrarum Deliciarum, sive Indulgentiarum Stationum Urbis, a Paulo V concessus," 1646.—*Montucla Hist. de l'Astron. Biog. Univ.*

RHODE (JOHN GEORGE) an eminent Orientalist of Breslau, in Silesia, where he died August 23, 1827. He was distinguished for his scientific researches into natural history and antiquities, especially relating to India and Bactria.—*Foreign Review.*

RHODES (ALEXANDER de) a Jesuit missionary, born at Avignon in 1591. He went in 1618 to the East Indies, and resided some time at Goa and Macao, where he made himself acquainted with the language and customs of the country, and then proceeded to Tonquin and Cochin China to preach Christianity. Persecution obliged him to relinquish his labours, and return to Europe; but he afterwards engaged in a new mission to Persia, and died in that country in 1660. He published "Dictionarium Annamiticum Lusitanum et Latinum," Romæ, 1651, 4to; a Tonquinese and Latin Catechism, Rome, 1652, 4to; a "History of the Kingdom of Tonquin, and of the Progress of the Gospel in that Country," 1650, 4to; "A Relation of the Progress of the Faith in the Kingdom of Cochin China," 1652, 12mo; "A Summary of various Voyages and Apostolic Missions, from 1618 to 1653," 12mo; and several other works, relating principally to the propagation of the Gospel.—*Biog. Univ.*

RHYNE (WILLIAM TEN) an eminent Dutch physician and naturalist, born at Deventer about 1640. He had already acquired great reputation, when in 1673 he was appointed physician to the Dutch East India company. Going out to the Indies he stayed some time at the Cape of Good Hope, to examine the productions of the country and the manners of the inhabitants, after which he went to Java, where he employed himself with great assiduity in scientific researches. He delivered lectures on medicine and anatomy at Batavia, made botanical excursions in Java and the Sunda isles, and is said to have taken a voyage to Japan and cured the emperor of a dangerous malady. He assisted governor van Rheede in the *Hortus Mala-*

RIC

baricus; and he published "*Meditationes in magni Hippocratis Textum XXIV de Veteri Medicina*," Leyden, 1672, 12mo; "*Excerpta ex Observationibus Japonicis de frutice Thise, &c.*" Dantisc, 1768, folio; and "*Schediasma de Promontorio Bonæ Spei, et de Hottentotis*," Schaffh. 1686, 12mo, reprinted at Bâle, 1710. The period of his death is uncertain.—*Biog. Univ. Class.*

RIBAS (JOSEPH de) a general officer in the Russian service, who was descended from a family of Spanish origin, but was born at Naples about 1735. He was banished from Italy on account of some intrigues in which he had engaged, and taking refuge at Leghorn he became acquainted with Alexis Orloff, who commanded a Russian fleet, which had been sent thither to carry off the natural daughter of the empress Elizabeth, whom prince Radziwill had taken to Rome and abandoned to a state of the utmost destitution. Ribas assisted Orloff in this undertaking and then went to Russia, to obtain from Catherine II the reward of his services. He was placed as a military instructor in the corps of cadets at St Petersburg; and he afterwards attended on his travels the son of the empress by Gregory Orloff. On his return to Russia he obtained a regiment of carabineers; and in 1790 he commanded, with the rank of admiral, the fleet destined for the attack of Kilis and Ismail, to the success of which he greatly contributed. He again signalized himself in 1791, and he was nominated one of the three commissioners to treat of peace with the Turks at the congress of Jassy. In December 1792 the empress made him a rear-admiral, and shortly after gave him a pension of 20,000 rubles. He subsequently was appointed commandant of the projected port of Hagi Bey, on the Black Sea. *Dict. des H. M. du 18me S. Biog. Univ. Class.*

RIBES (ANN ARNAUD de) a distinguished French officer of engineers, born at St Felix in 1731. He acquired eminence in his profession, and had obtained the rank of lieutenant-colonel at the commencement of the Revolution. In 1793 he was sent to the army of the Eastern Pyrenees, when he contributed to the capture of Collioure, Figueres, and Rosas. He was afterwards appointed to direct the fortifications in the Isle of Elba, and he added to his reputation at the siege of Rosas in 1808, when he triumphed for the second time over the difficulties presented by the strength of the fortifications and the resistance of the besieged. His death took place in 1811.—*Biog. Univ. Class.*

RICARD (DOMINIC) a French writer, born at Toulouse in 1741. He adopted the ecclesiastical profession, and became professor of rhetoric at the college of Auxerre, after the suppression of which establishment he went to Paris, and was employed in the education of the son of the president de Mesley. He engaged in many literary undertakings, among which was a complete translation of the works of Plutarch, forming 30 vols, 20mo. He also wrote a poem on "The Sphere,"

RIC

Paris, 1796, 8vo; treatises on superstition and on enthusiasm; and he founded the "*Journal de la Religion et du Culte Catholique*;" and left a considerable number of manuscripts. His death took place in 1803. *Biog. Univ.*

RICCATI (VINCENT de) a jesuit, distinguished as a skilful geometer, born at Castel Franco in 1707. He acquired under his father count Riccati, one of the most eminent mathematicians in Italy, his first notions of science. Being sent by his superiors to Bologna, he was for thirty-five years professor of the higher branches of the mathematics; and he was also appointed surveyor of the courses of the rivers in the territories of Bologna and Venice. He died at his native place in 1775. Among many learned works which he published may be mentioned, "*De Usu Motûs tractorii in Constructione Aequationum differentialium Commentarius*," Bologna, 1752, 4to; "*Opuscula ad Res Physicas et Mathematicas pertinentia*," Lucca, 1757—72, 2 vols, 4to; and "*Institutiones Analyticae collectae*," Bologna, 1765—67, 3 vols, 4to.—**RICCATI** (count JORDANO de) brother of the preceding, died at Treviso in 1790, at the age of eighty-one. He was noted as a mathematician, an architect, and a musician; and was the author of a "*Treatise on Vibrating Cords*," and other works.—*Biog. Univ. Class.*

RICCI (MATTHEW) a jesuit, and missionary in China, was born at Macerata in 1552. He was in high favour with the emperor of China, who gave him permission to build a church. He wrote some curious memoirs on China, of which he drew a curious map. He died there in 1610.—*Moreri.*

RICCI (LAURENCE) the last general of the jesuits previously to their suppression by pope Clement XIII. He was descended from an ancient and noble family, and was born at Florence in 1703. He entered into the order of St Ignatius at the age of fifteen; and after having been professor of rhetoric and philosophy at Sienna, he became successively spiritual director at the Roman college, and secretary of his order. In 1758 he succeeded to the office of general on the death of Centurioni; and on his subsequently resisting the plan for the suppression of the jesuits, he was sent a prisoner to the castle of St. Angelo, where he died in 1775. While under confinement he issued a declaration, stating—1. That the society of jesuits had done nothing to merit suppression; 2. That he himself had committed no crime to deserve imprisonment; 3. That he sincerely pardoned the authors of his persecutions.—*Life by Caraccioli. Biog. Univ.*

RICCI (SCRIPIO) bishop of Pistoia and Prato, nephew of the last general of the jesuits. He was born at Florence in 1741. Being favoured by the grand-duke of Tuscany (Leopold) he opened at Pistoia, in 1786, a synod, with a view to the propagation of some new religious doctrines which he wished to establish; but these being considered as innovations, he incurred the displeasure of the pope,

R I C

was exposed to public animadversion, and obliged at length to resign his see. In 1799 he was imprisoned for declaring in favour of the decrees of the Constituent Assembly, which had been formed under the temporary influence of the French, who then occupied Tuscany. Being set at liberty, he signed, in 1805, a formula of entire adhesion to the bulls which he had before objected to, and he thus became reconciled to the holy see. He died in 1810. In 1824 was published a very curious work, entitled "Vie et Mémoires de Scipion de Ricci, par M. de Potter," which has been translated into English.—*Biog. Univ. Class. Revue Encyc.*

RICHMOND (LEON) a pious clergyman of the established church, and ingenious writer of works of fiction. He was the son of a physician at Liverpool, where he was born in 1772. After some preliminary education he went to Trinity College, Cambridge, in 1789; and he pursued his academical studies with exemplary diligence, to prepare himself for the bar. But after residing some years at the university, he became desirous of entering the church, and having been permitted to follow his inclination, he was ordained a deacon in June 1797, and shortly after he took the degree of Master of Arts. He first held a curacy in the Isle of Wight, whence he removed to the chapel of the Lock Hospital, London, in 1805; and the same year he was presented to the rectory of Turvey, in Bedfordshire, where he remained till his death which took place May 8th, 1827. Besides some sermons, Mr Richmond was the author of a volume entitled "Annals of the Poor," containing the Dairyman's Daughter, and other devotional tales marked by an originality of manner, graphic delineation of character, and depth of feeling and expression, which have rendered them popular in no common degree. He also produced a work entitled "The Fathers of the English Church, or a Selection from the Writings of the Reformers and Early Protestant Divines of the Church of England," 1807—1811, 8 vols, 8vo.—*Grinshawe's Memoir of the Rev. Leigh Richmond. Georgian Era.*

RICHTER (AVGUSTUS GOTTLIEB) an eminent German surgeon, born at Zoerbig in Saxony in 1742. He studied medicine at the university of Gottingen, and took the degree of MD. at the age of twenty-two. Having travelled for improvement, he returned to Gottingen, where he occupied a professorship till his death in 1812. The most important of his numerous works are, "Observationes Chirurgicæ," 1770—80, 3 parts, 8vo; a "Surgical Library," 1771—97, 15 vols, 8vo; a "Treatise on Hernia," 2 vols, 8vo; "The Elements of Surgery," 7 vols, from 1782—1804; and "Remarks on Surgery and Medicine," 8vo, of which last work his son published a second volume in 1813. Another posthumous work of A. G. Richter, also edited by his son, entitled "Spezielle Therapie," appeared at Berlin, 1813—20, 7 vols, 8vo.—*Biog. Univ. Class.*

R I F

RICHTER (CHRISTIAN FREDERICK) a German physician, born in 1744 at Halle, where he received his education. He took the degree of MD. at the university in 1767, and having settled at Berlin he became physician to the king of Prussia. He died in 1826. He published "Dissertatio Epistolaris de Observanda in Morborum Medela Medendi Methodo generatim considerata," 1771; "Observations on the Cause and Treatment of Different Kinds of Fevers," 1784; and "Contributions to the Practical Knowledge of Fevers," 1794.—*Neuer Nekrol. der Deutschen*, 1826.

RICHTER (WILLIAM MICHAEL VON) professor emeritus, and professor of the Medico-Physical Society at Moscow, his native city, where he died in 1822, at the age of seventy-four. He travelled in Germany, France, England, and Holland, and in 1788 obtained the degree of MD. at the university of Erlangen. Two years after he became professor in the university of Moscow, where he continued his public lectures till 1819. He had the title of physician to the emperor, was a counsellor of state, a knight of several orders, and a member of various scientific societies. Among the works which he published, the most important is his "History of Medicine in Russia," written in German, Moscow, 1813—15, 3 vols, 8vo.—*Biog. Univ. Class.*

RICHTER (JOHN PAUL FREDERICK) a celebrated German novelist, born at Wunsiedel in Franconia, in 1763. He studied theology at Leipsic, and abandoned that pursuit to devote himself to the cultivation of the belles lettres. The duke of Hildburghausen gave him the title of aulic counsellor; and having married the daughter of a person who held an office under government at Berlin, he settled at Weimar in 1798. In 1802 the prince prime Dalberg bestowed on him a considerable pension, which was continued to him after the death of that prelate by the king of Bavaria. Richter died November 14, 1825. His works, which are extremely numerous, are highly esteemed by his countrymen; and many of them, under the form of romances, treat of abstruse questions in philosophy and psychology. Mr. Carlisle has published two of his works among his German Romances.—*Ibid.*

RIFFAULT DES HETRES (JEAN RENÉ DENIS) a French chemist, born about 1754, at Saumur, in Anjou, where his father was a physician. Having made himself acquainted with the manufacture of saltpetre and gunpowder, he was appointed commissaire des poudres at Ripault, near Tours, and under his care that establishment became one of the finest in the kingdom. He distinguished himself by many discoveries and improvements in that branch of the arts which he cultivated; and after passing more than half a century in the public service, he devoted the latter part of his life to science and literature. He died at Paris, February 7, 1826. He translated Dr Thomson's System of Chemistry, and various other English works relating to the same science; and he also produced some valuable original treatises on

practical chemistry.—*Ann. Biog. Biog. Univ. Class.*

RIGALTIIUS, or **RIGAULT** (**NICHOLAS**) a learned critic, was born at Paris in 1577. He studied for an advocate, but afterwards devoted his entire attention to literary pursuits. He became librarian to the king, in which situation he succeeded Casaubon, procurator-general of the supreme court of Nancy, counsellor of the parliament of Metz, and of which province he became intendant. He was the intimate friend of Thuanus, who dying made him guardian of his children. He died in 1654. He published editions of Martial, Phædrus, Minutius Felix, the works of Cyprian and Tertullian, and the *Scriptores Rei Accipitrarii*.—*Moreri*.

RING (**JOHN**) an eminent surgeon, who was a pupil of Mr Pott, and practised with great reputation in the metropolis till his death, which took place December 7, 1821. He was an active promoter of the practice of vaccination; and besides numerous papers in the *London Medical Journal*, he published "A Treatise on the Cow-Pox, containing the History of Vaccination," in two parts, 1801—3, 8vo; pamphlets in answer to the objections of Mr Goldson, Dr Moseley, and Mr Birch, against vaccination; and "A Treatise on the Gout," 1813, 8vo. Mr Ring also printed a "Translation of the Works of Virgil, partly original and partly altered from Dryden and Pitt," 1820, 2 vols, 8vo; a translation of Dr Geddes's Ode to Peace, 8vo; a translation of Mr Anstey's Ode to Jenner, 8vo; and other poetical productions.—*Gent. Mag.*

RINGELBERGIUS (**JOACHIM FORTIUS**) a mathematician. His German name was Storck, and he was born at Antwerp. He studied at Louvain, where he became a professor. His works are, "Dialectica;" "De conscribendis Epistolis;" "De Ratione Studii;" "Rhetorica;" "Sphæra sive Institutionum Astronomicarum;" "Cosmographia;" "Optica;" "Chaos Mathematicum." An edition of them was published at Leyden in 1531. Ringelbergius died in France in 1536.—*Moreri*.

RINK (**FREDERIC THEODORE**) a distinguished Orientalist, who was professor of theology at Königsberg, where he died in 1811. Besides a great number of philosophical tracts, he was the author of a discourse, "De Linguarum Orientalium cum Græca mira convenientia," 1783, 4to; and he published editions of some of the writings of the historians Makrizi and Abulfeda.—*Biog. Univ. Class.*

RIOJA (**FRANCISCO de**) one of the most celebrated poets of Spain in the reign of Philip IV. He was born in 1600, and became librarian and historiographer to that prince, enjoying for a time more than any other writer of his time the favour of the minister count Olivarez. Being the friend of Quevedo he shared his ill fortune, and though himself an inquisitor, he was confined some years in a state prison. At length he was liberated, and after a period of tranquil residence in a pleasant retreat near his native city Seville, he was recalled to the metropolis,

where he died in 1659. Bouterwek has injuriously confounded this poet among the servile followers of Gongora, but he rather exhibited a splendid contrast to the bad taste of contemporaries, and in point of descriptive talent, sublimity of fancy, and correct feeling, he deserves a place by the side of Garcilasso de la Vega, Fernando de Herrera, and Luis de Leon. Among his productions may be mentioned an "Ode to the Ruins of Italica," "Silvas to the Flowers," and an "Epistle to Fabio," contrasting the pleasures of retirement with the troubles and intrigues of a court. He was also distinguished as a dramatist, and besides numerous pieces which he wrote for the stage in conjunction with Moreto, he produced independently several excellent comic dramas, the most noted of which is his "Garcia del Castgnar."—*Maury, Espagne Poétique. For. Rev. Metropolit.*

RIPAULT (**LOUIS MADELEINE**) a learned antiquary and philologist, who was born at Orleans in 1775. He was educated for the church, and at the age of fifteen he obtained a benefice, but at the Revolution he quitted his profession, and settled at Paris as a bookseller and public writer. He became one of the conductors of the *Gazette de France*, and afterwards joining the expedition of Buonaparte to Egypt, he was made librarian to the Egyptian Institute, and also librarian to Buonaparte. The latter situation he resigned in 1807, and retiring to the neighbourhood of Orleans, died there in 1823. He published "Description abrégée des principaux Monuments de la Haute Égypte," 1800, 8vo; "Histoire Philosophique de l'Empereur Marc-Antonine," 1820, 4 vols, 8vo; and an Abridgement of the last-mentioned work: besides which he left a quantity of manuscripts relating to hieroglyphics and the Eastern languages.—*Ibid.*

ROBECK (**JOHN**) a native of Calmar in Sweden, who entered among the jesuits, and became eminent as a writer on ascetic theology. He was born a Protestant, but going into Germany he was converted to the Catholic faith towards the beginning of the eighteenth century. After being employed as a missionary at Vienna and Rome, he was about to exercise the same office in Sweden, but the government objected to his returning thither. He then passed nine years in retirement, and at length, in a fit of melancholy, drowned himself in the Weser in 1739. Robeck was the author of an apology for suicide, published under the title of "Exercitatio Philosophica de Morte Voluntaria Philosophorum et bonorum Virorum, &c." Bremen, 1736, 4to, with notes in refutation by Funk, the editor of the work.—*Chaufepie Dict. Biog. Univ.*

ROBERT (**PETER FRANCIS JOSEPH**) a French conventionalist, born near Givet in 1763. Before the Revolution he was a grocer at Paris, and having married mademoiselle Keratio he adopted the literary profession, and in conjunction with her he conducted *Le Mercure National*. Becoming secretary to Danton, he was elected a deputy to the Convention, in

which he voted for the death of the king, In 1795 he was despatched on a mission to Liege, but he was recalled shortly after, when he settled at Brussels, and engaged in commercial occupations. Among the various works which he published are, "Mémoire sur le Projet d'Etablissement d'une Société de Jurisprudence," 1790, 8vo; "Le Republicanisme adapté à la France;" and "Opinion concernant le Jugement de Louis XVI," 1792, 8vo.

—ROBERT (LOUISE FÉLICITÉ GUINEMENT DE KERALIO, dame) wife of the preceding, was the daughter of a distinguished writer, M. de Keralio. She was born at Paris in 1758, and died at Brussels in 1821. She wrote "Histoire d'Elizabeth, Reine d'Angleterre," 1786—87, 5 vols, 8vo; "Amélie et Caroline, ou l'Amour et l'Amitié," 1808, 5 vols, 12mo; "Alphonse et Mathilde, ou la Famille Espagnole," 1809, 4 vols, 12mo, besides other original works. She likewise translated Swinburne's Travels in the Two Sicilies, and other English productions, and several Italian works; and she published "Collection des meilleurs Ouvrages Français composés par des Femmes," 1786—89, 14 vols, 8vo.—(See KERALIO, Dict.)—*Biog. Nouv. des Contemp. Biog. Univ. Class.*

ROBERT DE VAUGONDY (GILES) a French geographer, who was a native of Paris, where he died in 1766, at the age of seventy-eight. He held the office of geographer in ordinary to Louis XV, and he published "Géographie Sacrée et Historique de l'Ancien et du Nouveau Testament," 1747, 2 vols, 12mo; "Grand Atlas Universel," 1758, folio; "Atlas complet des Révolutions du Globe," besides other works.—ROBERT DE VAUGONDY (—) son of the preceding, was born at Paris in 1723, and died in 1786. He assisted in the professional labours of his father, and his talents and acquirements procured him the post of geographer in ordinary to Stanislaus I, king of Poland. He also held the office of royal censor, and had a pension from the king of France. Besides a great number of geographical memoirs, read before the Academy of Sciences, he was the author of "Tablettes Parisiennes;" "Promenades des Environs de Paris;" "Cosmographie;" "Description et Usage de la Sphère Armillaire," &c.—*Biog. Univ.*

ROBERTI (JOHN) a jesuit, born in Flanders in 1569, and died at Namur in 1651. He was successively professor at Douay, and several of the colleges of his order in Germany. Among his works are, "Dissertatio de Superstitione," Treves, 1614, 16mo; "Historia Sancti Huberti," Luxembourg, 1621, 4to; "Sanctorum quinquaginta Jurisperitorum Elogia," Liege, 1632, 12mo; "Vita Sancti Lamberti, Episcopi Tungrensis," 1633, 8vp. He also published a poem, whose author is unknown, entitled "Contemptus Mundi, versu rhythmico," 1618, 8vo.—*Biog. Univ. Class.*

ROBERTI (JOHN BAPTIST) an Italian writer, born at Bassano in 1719. He entered among the jesuits, and became professor of philosophy at Bologna, where he obtained

great reputation. He died in 1786. His works, which relate to polite literature, were published collectively at Bologna in 1767, and reprinted at Bassano in 1797, 15 vols, 16mo. A new edition has since appeared, with a life of the author.—*Ibid.*

ROBERTSON (WILLIAM) a grammarian, was born in Scotland, and studied at Edinburgh, where he took his degree of M.A. In 1650 he came to London as a teacher of Hebrew. After the Restoration he settled at Cambridge. He died about 1690. His works are, "First and Second Gates to the Holy Tongue," 1653, dedicated to lady Ranelagh, one of his pupils, the first a grammar, the second a lexicon; "Key to the Hebrew Bible;" "The Hebrew Text of the Psalms and Lamentations," without points, 12mo, 1656; "Phraseologia Generalis, or a General Phrase Book, Latin and English," 1681, 8vo.—*Chalmers.*

ROBERTSON (ABRAHAM) Savilian professor of astronomy, and superintendent of the Radcliffe Observatory at Oxford. He was born at Dunse in Berwickshire, in 1751, and receiving some education in the country, at the age of twenty-four he removed to London. Being disappointed in his expectations of procuring a situation in the East Indies, he went to Oxford, and through the patronage of professor Smith and others, he obtained admission into Christchurch college. Subsequently taking orders, he was made one of the chaplains of Christchurch; and in 1789 he was presented to the collegiate benefice of Ravensthorpe, near Northampton. In 1792 he superintended the printing of Torelli's edition of Archimedes at Oxford; and the same year he published a work entitled "Sectionum Conicarum Libri VII." In 1795 he was chosen a fellow of the Royal Society; and he contributed some valuable papers to the Philosophical Transactions. In 1797 he succeeded Dr Smith as Savilian professor of geometry; in 1807 he took the degree of DD; and in 1810, having succeeded Dr Hornsby at the Radcliffe Observatory, he exchanged the geometrical chair for that of astronomy. His death took place at Oxford, December 4, 1826. He was the author of a treatise on the "Elements of Conic Sections;" and he published the second volume of Bradley's Astronomical Observations, besides other works.—*Gent. Mag.*

ROBINET (JOHN BAPTIST RENÉ) a French writer, born at Rennes in 1735. He engaged in the ecclesiastical profession among the jesuits, but regretting the confinement to which he had subjected himself, he devoted his time to literary studies, and went to Amsterdam, where he published, in 1761—68, a work entitled "De la Nature," 4 vols, 8vo, which attracted considerable notice on account of the singular opinions advanced in it. It was condemned by authority in France, and animadverted on by the abbé Barruel and father Richard. Returning to Paris in 1778, Robinet was appointed royal censor, and private secretary to the minister Amelot. He died at Paris in 1820, after having signed a retraction of

the principles of the constitutional church, which he had adopted during the Revolution. A list of his numerous publications, original and translated, may be found in the annexed authority.—*Biog. Univ. Class.*

ROBINSON (ANASTATIA) a public singer of some eminence, in the early part of the last century. She was descended from a good family settled in Leicestershire, but her father exercised the profession of a portrait painter, and being attacked by inflammation of the eyes, which terminated in the loss of sight, and thus prevented him from supporting his family by the labour of his pencil, he, in consequence of his daughter's taste for music, gave her an education which might enable her to make it the source of pecuniary emolument. She was placed under the tuition of the celebrated Dr Croft, signora Cuzzoni Sandoni, and an Italian singer called the Baroness. Though she had a fine voice she never became a first-rate singer. However, she sang at the opera for some years, more admired perhaps for her personal charms and accomplishments, the amability of her disposition, and her irreproachable conduct, than for her acknowledged talents. At length she quitted the stage, in consequence of her marriage with the celebrated earl of Peterborough, though the connexion was not publicly acknowledged till some years after it took place. She behaved with great propriety in the high station which she thus attained; and having survived her husband about fifteen years, she died in 1750.—*Biog. Dict. of Mus.*

ROBINSON (THOMAS) an ingenious naturalist, who lived in the beginning of the eighteenth century. He was an episcopal clergyman, and held the rectory of Ousby, in Cumberland, where he died in 1719. His long residence in the neighbourhood of a mountainous and mineral district led him to turn his attention to the study of mineralogy, geology, and other branches of the science of nature. As the result of his researches he published "An Essay towards a Natural History of Westmoreland and Cumberland, wherein an Account is given of their several Mineral and Surface Productions, with some Directions how to discover Minerals by the external and adjacent Strata and Upper-covers, &c." 1709, 8vo. This work, which is dedicated to lord Lonsdale, is still interesting, on account of the facts which it contains, and which show the author to have been an intelligent observer of natural phenomena, though his attempts at speculation are, as might have been expected, futile.—*Works of the Learned*, vol. xi. *Lysons's Magna Britannia*, Cumberland.

ROBINSON (ANTHONY) a liberal and enlightened writer on theology and morals. He was born in 1762 at Kirkland, near Wigton, in Cumberland; and he was educated at an academy at Bristol among the Particular Baptists; after which he became pastor of a church at Fairford in Gloucestershire, whence he soon removed to another of the General Baptists, in Worship-street, Lon-

don. He gave up the clerical profession, in consequence of having succeeded to a small paternal estate; and for some years he settled in the country, but in 1796 he removed again to London, and entered into business as a sugar-refiner, in which trade he accumulated a handsome fortune. He passed the latter part of his life in the metropolis, where he died January 21st, 1827. He was the author of "A Short History of the Persecutions of Christians by Jews, Heathens, and Christians," 1790, 8vo; "A View of the Causes and Consequences of English Wars," 1798, 8vo; and an "Examination of the Rev. Robert Hall's celebrated Sermon on Infidelity;" besides other tracts, and contributions to the Analytical Review, the Monthly Magazine, and the Monthly Repository.—*Theolog. Repos.*

ROBSON (GEORGE FENNEL) an eminent draughtsman and landscape painter in water colours, who was born in the city of Durham, where his father was engaged in trade as a wine merchant. His taste for drawing manifested itself at a very early age; and it has been stated that when three or four years old he attempted to draw from memory the objects which he had observed while walking with his mother in the fields. This propensity to imitate the works of nature induced him, when a schoolboy, to devote every vacant hour and holiday to the exercise of his pencil. When any artist visited Durham, for the purpose of sketching the beautiful and romantic scenes in its vicinity, George Robson was ever tracing his footsteps, creeping to his side, and eagerly watching the progress of his undertaking. At length he was placed under the tuition of Mr Harle, the only drawing-master the city afforded; but that artist refused payment for the lessons he gave, observing that the boy had already got too forward to profit by his instruction. Before he attained the age of twenty he visited London, where he soon became known as a talented and industrious student. With such qualifications he gradually advanced to great eminence in his profession. His first publication was a view of his native city, the profits of which enabled him to undertake a journey to the Scottish Highlands, with whose wild and romantic scenery he had long wished for an opportunity to make himself acquainted. In the dress of a shepherd, with a wallet at his back, and Scott's poem, "The Lay of the Last Minstrel," in his pocket, he wandered over the mountains winter and summer, till he had become familiar with the various aspects they presented under different changes of season, and was enabled to lay up a rich store of materials for the improvement of his taste and skill. On his return to London, where he took up his future residence, he published "Outlines of the Grampian Mountains." In 1813 he first appeared as a candidate for public approbation, in the ninth annual exhibition of the Society of Painters in Water Colours; and he was elected a member of that association in the following year. But it was not till the

exhibition of 1815, that his works began to attract that general notice which at length procured for him extensive and abundant patronage. From this period his interests became identified with those of the society just mentioned, for the promotion of which he exerted himself with the utmost zeal and with great success. As an artist Robson was remarkable for vigour of execution. His conception of form might occasionally be deficient in grandeur, but with regard to effect and colouring he ever displayed abundant power and felicity. The Scottish hills had strongly impressed their awful characteristics on his imagination; and the calm and serenity of his own mind so well assimilated with those scenes of peace and loneliness, that they were ever present to his mind even when settled altogether in the south of England, and drawing his woods and waterfalls from the objects around him. One of his last and best pictures was a "View of London Bridge before Sunrise." He died in the flower of his age, in 1833. In private life this ingenious artist was distinguished for straight forward integrity, modesty, ingenuousness, and unbounded benevolence. The society to which he belonged was in some measure indebted to him for its permanent existence; for when the managers of the institution were embarrassed through the difficulty of obtaining rooms for the exhibition of paintings in water colours, he caused the present gallery to be built on his own responsibility, and by that means insured the stability and prosperity of the association. Among the engraved and published works of Robson, besides those already noticed, may be mentioned, "Picturesque Views of English Cities," 1828, 4to, with descriptive letter-press furnished by J. Britton, FSA.; and he also contributed drawings for "Landscape Illustrations of the Waverley Novels," engraved by W. and E. Finden.—*Public Journals*.

ROCCA (ALBERT JOHN MICHAEL) a French officer, knight of the legion of honour, who served as a lieutenant of hussars in the campaigns of Buonaparte in Prussia and in Spain. In the latter he was severely wounded, and was obliged to quit the army. About 1811 he retired to the residence of his family at Geneva, where he became acquainted with the celebrated madame de Staël, to whom he was secretly married. The union was divulged after her death in July 1817; and M. Rocca survived her but a few months, dying January 30, 1818, in the thirty-first year of his age. He was the author of "*Mémoire sur la Guerre des Français en Espagne*," 1814, 8vo, which was translated into English; and "*Campagne de Walcheren et d'Anvers en 1809*," 1815, 8vo; besides which he wrote a novel entitled "*La Maladie du Pays*," which has never been published.—*Biog. Univ. Class.*

ROCHEFOUCAULD LIANCOURT (FRANCIS ALEXANDER FREDERIC duc de la) a patriotic French statesman, who was the son of the Duc d'Estissac, and was born January 11, 1747. He held the office of grand keeper of the royal wardrobe to Louis

XV, and he was attached to the service of his successor. When the States-general were convoked, in 1789, he was elected deputy from the nobility of Clermont, in Beauvoisin. In that assembly he displayed his ardour in the cause of liberty, and his loyalty to the king, whose fate he made repeated attempts to avert, but finding them frustrated, and his own life in danger, he quitted his native country, and fled to England, where he resided in retirement till 1794. He then went to America, and passed some years in travelling through the United States, every where collecting information concerning the public institutions, agriculture, commerce, and arts of the country. The result of his observations appeared in his "*Voyages dans les Etats-Unies d'Amerique, faits en 1795, 1796, 1797, et 1798*," 8 vols, 8vo. Towards the close of 1798 he returned to Europe, and visited Holland, the north of Germany, and Denmark, where he pursued his inquiries concerning such subjects as those which had previously engaged his attention. After the ascendancy of Buonaparte was established in France he returned home, his name having been previously erased from the list of emigrants. He settled on his estate at Liancourt, where he established schools and manufactories, and engaged in other schemes for the benefit of the labouring classes. He accepted neither place nor favour from the consular or imperial government, except the decoration of the legion of honour. After the first restoration of the Bourbons, he was nominated on the 4th of June, 1814, a peer of France, with the title of Duc de la Rochefoucauld, having previously borne that of Duc de Liancourt. During the hundred days in 1815, he accepted the office of deputy to the chamber of representatives from the division of Clermont, in the hope of being serviceable to his country, though he disapproved of the conduct of those who were at the head of public affairs. After Louis XVIII returned from Ghent, he was recalled to the chamber of peers, in which he spoke in favour of the liberty of the press, and on every occasion showed himself to be the temperate advocate of public liberty. He held the post of inspector-general of the conservatory of arts and occupations, and some other public offices till 1823, when, having given offence to government by the free expression of his opinions, he was suddenly displaced from the stations which he had filled with much credit to himself and advantage to the public. He died at Paris March 28, 1827. He published an abstract of Sir F. Morton Eden's History of the Poor, and several tracts on statistics, education, the management of prisoners, &c.—*Biog. Newr. des Contemp. Rev. Encycl.*

ROGERS (CHARLES) an antiquary and connoisseur, was born at Westminster in 1711. He held a situation in the Custom-house, and died in 1784. He was the author of a translation of Dante's Inferno, some papers in the Archæologia, and a "Description of a Collection of Prints in Imitation of Drawings," to

which was added, "Lives of their Authors, with Explanatory and Critical Notes," 2 vols, folio.—*Gent. Mag.*

ROSCOE (WILLIAM) the historian of Lorenzo de Medici and of Leo X, was born at Liverpool, of humble origin, in the year 1752. His father and mother were both in the service of a gentleman of the most amiable and generous disposition, who, dying without an heir, left the greatest part of his property to the subject of this memoir. It does not appear that his patron paid any attention to his early education, and his father had no higher ambition than to make him acquainted with writing and arithmetic. Through an obstinacy of temper, which in some minds is the forerunner of genius, Roscoe could not be prevailed upon to submit to the drudgery of scholastic discipline; and consequently did not avail himself even of the small advantages of education which his parents were able to afford him. It was, however, his merit to discover in time the means of self-education. He early began to think for himself; and his habits of mental application soon gave evidence of that genius which afterwards shone forth with so conspicuous a splendour. At the age of sixteen, his poetical productions would have done credit to one who had enjoyed all the advantages of education; and he was at that time found qualified to be admitted as an articled clerk to Mr Eyres, an eminent solicitor of Liverpool. Soon after he had entered on the duties of his office he was induced to undertake the study of the Latin language, in which he found means to acquire a proficiency by his own unassisted efforts; and he subsequently obtained an acquaintance, in the same manner, with the French and Italian. The best authors in each of those tongues soon became familiar to him, and perhaps few of his countrymen ever acquired so general, so extensive, and so recon-dite an intimacy with Italian literature as did Mr Roscoe. At the expiration of his clerkship he entered in partnership with Mr Aspinwall, a gentleman previously engaged in practice as a lawyer; and he soon became invested with the entire management of an office extensive in practice and of high reputation. About this time he became intimate with Mr Enfield, the tutor of a dissenting academy at Warrington, and the author of popular compilations entitled "The Speaker;" and the "Sequel to the Speaker," to which Mr Roscoe contributed an "Elegy to Pity," and an "Ode to Education." In December 1773, he recited before the society formed at Liverpool for the encouragement of drawing, painting, &c. an Ode which was afterwards published, with "Mount Pleasant," his first poetical production, composed at the age of sixteen. He occasionally gave lectures on subjects connected with the objects of this institution, and he was a very active and useful member of this society. When the projected abolition of the Slave Trade became a topic of public discussion he warmly interested himself in the success of that measure. A Spanish jesuit named Harris having published a tract with the title of

APP. BIOG. DICT.

"Scriptural Researches into the Licitness of the Slave Trade," he answered it with great spirit and acuteness by "A Scriptural Refutation of a Pamphlet lately published by the Rev. Raymond Harris," 1788. He afterwards published the first and second parts of his principal poem, "The Wrongs of Africa." With an ardent imagination, and a sincere love of liberty, Mr Roscoe's feelings were naturally excited by the opening prospects of the French Revolution, and on that occasion he celebrated the charms of freedom, in a translation of one of the odes of Petrarch, which was inserted in the *Mercurio Italiano*. He also composed, under the influence of the same feelings, his two songs "O'er the vine-covered hills and gay regions of France;" and "Millions be Free," which were equally popular both in France and at home. The great work on which the fame of Mr Roscoe chiefly rests, his "Life of Lorenzo de Medici called the Magnificent," was commenced in 1790 and completed in 1796. Such was the extraordinary success of this publication, that he was induced, in 1797, to relinquish his profession of an attorney, and to enter as a student at Gray's-inn, in order that he might be enabled to practise as a barrister. He now employed his leisure in studying the Greek language, in which he made considerable progress; and in 1798, he published "The Nurse, a poem, from the Italian of Luiga Tansillo," 4to. In 1805 appeared his second great work, "The Life and Pontificate of Leo X, the Son of Lorenzo de Medici," in 4 vols, 4to; in collecting materials for which he is said to have been liberally assisted by lord Holland and the earl of Bristol. About this period he appears to have given up his intention of practising at the bar, instead of which, he became a banker at Liverpool, in partnership with his friends Messrs Clark and Sons. When the general election took place, in 1806, many of the inhabitants of Liverpool, displeased with the conduct of general Tarleton, one of their late members, in opposing the abolition of the Slave Trade, determined to place Mr Roscoe, who had written against slavery in every form, in opposition to him. Accordingly many of his friends, consisting chiefly of the quakers and Unitarians, resolved to put him in nomination, and to return him solely at their own expense. A very large subscription was consequently raised, and after a most severe contest the election terminated in his favour. His senatorial career, however, was brief; for after the dissolution of Parliament, in 1807, he retired from the representation; and from that time confined his political exertions to the publication of occasional pamphlets. Among these may be mentioned "Remarks on the Proposals made to Great Britain for a Negotiation with France," 1809; "Considerations on the Causes of the present War," 1808; "Observations on the Address to His Majesty proposed by Earl Grey," 1810; "Occasional Tracts relative to the War betwixt France and Great Britain," 1811; "Letter to Henry Brougham, Esq. on

a Reform in the Representation of the People in Parliament," 1811; "Answer to a Letter from Mr J. Merritt on Parliamentary Reform," 1812; "Observations on Penal Jurisprudence, and the Reformation of Criminals," 1819. In 1817 Mr Roscoe published a discourse on the "Origin and Vicissitudes of Literature, Science, and the Arts," which he had delivered at the opening of the Liverpool Royal Institution. In 1824 he superintended a new edition of the works of Pope, the celebrated poet, to which was prefixed a life of that author; and the criticisms contained in this publication involved him in a controversy with the rival commentator on Pope, the Rev. W. Lisle Bowles. The last work in which he was occupied related to botany, a science which he had long cultivated, and in which he had displayed his skill by various papers which appeared in the "Transactions of the Linnean Society." Mr Roscoe was also the author of the well-written preface to Daulby's "Catalogue of the Etchings of Rembrandt;" In his commercial pursuits Mr Roscoe proved unsuccessful, the banking-house to which he belonged failed, and his property was wrecked. The creditors would liberally have allowed him to retain his valuable library, but his sense of justice would not permit him to avail himself of their generosity. His books, including many valuable Italian works, were sold at Liverpool for 5150l., his collection of prints for 1800l., and the drawings for 738l. A portrait of Leo X was purchased for 500l. by Mr Coke of Holkham. Yet upon the whole the life of Mr Roscoe can scarcely be regarded as unfortunate. Distinguished by the friendship of the gifted and the great, his days were passed in free intercourse with kindred minds, and his declining years were soled by the affectionate attentions of warmly and sincerely attached relatives. He was considered as the head of the literary and scientific circles of his native town; and much of his time was spent in promoting the objects of the many noble public institutions which he had contributed to establish. His death, which was occasioned by a disorder partaking of the nature of cholera, took place at his seat at Toxteth park, near Liverpool, June 30th, 1831. His funeral was attended by committees of the Royal Institution, the Philosophical Society, and the Athenæum, and by nearly 200 gentlemen on foot, besides those in carriages.—*Ann. Biog.*

ROSE (SAMUEL) a lawyer, was born at Chiswick in 1767, and was educated by his father, Dr William Rose, who kept an academy there. He then studied at Glasgow, and attended the courts of law at Edinburgh. In 1786 he entered a student of Lincoln's-inn, and ten years afterwards he was called to the bar. He died in 1804. He was the editor of Comyn's Reports and Digest, and the author of a "Life of Goldsmith."—*Gen. Biog. Dict.*

ROSEL (JOHN AUGUSTUS) a painter and naturalist, was born near Armstadt in 1705. He pursued the profession of a miniature

painter at Nuremberg, but he was chiefly distinguished for his exquisite truth and delicacy in the delineation of insects. He wrote some entomological works, with coloured plates. He died in 1759.—*Filkington.*

ROSS, or ROUSE (JOHN) surnamed the Antiquary of Warwick, of which he was a native. He studied at Balliol college, Oxford, and was canon of Osney. After travelling over England he settled at Guy's Cliffe, in Warwickshire, and died there in 1491. A manuscript by him, on the history of the earls of Warwick, is contained in the Bodleian library. His "History of our Kings," and "Antiquities of Warwick," were printed by Hearne in 1719.—*Nicolson.*

ROTHERHAM (JOHN) a clergyman of the established church, was a native of Cumberland, and studied at Queen's college, Oxford, after which he became a curate in Yorkshire. Here he wrote a treatise on the "Doctrine of Justification by Faith," for which the university rewarded him with the degree of MA., and the bishop of Durham presented him to the living of Houghton-le-Spring. He also wrote "A Sketch of the Grand Argument for Christianity;" "An Apology for the Athanasian Creed;" "Essay on the Soul and Body;" "Essay on Establishments against the Confessional," 8vo.—*Gent. Mag.*

ROWLANDSON (THOMAS) an eminent caricaturist, born in the Old Jewry, London, in 1756. At the age of sixteen he was sent to Paris as a student in an academy for drawing, where he made rapid advances in the study of the human figure. Returning to London he attended at the Royal Academy, and availed himself of the advantages which it afforded for the improvement of his skill and taste. Having received a legacy of 7000l. from a female relation, he plunged into all the follies of fashionable life, and particularly gave himself up to gambling, by means of which he dissipated much valuable property. It was in the occasional intervals of abstinence from this mischievous pursuit that he produced the illustrations of the Tour of Dr Syntax in Search of the Picturesque, the Dance of Death, the Dance of Life, and various political caricatures and sketches, which have procured him great reputation. He died in the summer of 1827.—*Lit. Gaz. New Month. Mag.*

RUDING (ROGERS) rector of Meldun in Surrey, was born at Leicester in 1751, and became fellow of Merton college, Oxford, where in 1782 he took the degree of bachelor of divinity. He was chosen fellow of the Society of Antiquaries, and made several contributions to their Archaeologia. He died in 1820. His principal work is "Annals of the Coinage of Britain and its Dependencies," 4 vols, 4to.—*Gent. Mag.*

RUSSELL (THOMAS) an ingenious English poet, who was born at Bridport in Dorsetshire in 1762. He was educated at New college, Oxford, where he obtained a fellowship; and he died at Bristol, July 31, 1788. A small volume of his poems appeared shortly after his death, containing a number of sonnets, which

R U S

display much feeling, taste, and elegance of expression.—*Orig.*

RUST (GEORGE) a learned prelate, was a native of Cambridge. At the Restoration he went to Ireland, and after several preferments he became bishop of Dromore. He died in 1670. He published "A Funeral Sermon,"

R U S

preached by himself, on bishop Taylor; "A Letter of Resolution concerning Origen, and the chief of his Opinions;" "A Sermon on the Death of the Earl of Mount-Alexander;" "Remains," 8vo; "A Discourse of Truth," 8vo.—*Gen. Biog. Dict.*

S A L

SABAS, a famous heretic of the third century. He was the head of the sect of the Messalians, one of whose grand religious errors consisted in the strictly literal interpretation of every part of the holy Scriptures. Among other absurdities with which they are charged by ancient writers is refusing to engage in any employment, in compliance, as they asserted, with the injunction of Jesus Christ, who said, "Labour not for the meat that perisheth." Sabas is said to have lived till the beginning of the fourth century.—*Baronii Annales.*

SACHSIUS AB LEWENHEIM (PAUL LOUIS) a German naturalist of the seventeenth century. He was the author of a treatise entitled "Grammaralogia, sive Grammarorum vulgo Canerorum Consideratio Physico-philologico-historico-medico-chymica," Francof. et Lips. 1665, 8vo; and he published some papers in the *Miscellanea Curiosa*, "De Auro Vegetabili," and on other subjects.—*Gronovii Bibliot. Regn. Anim. et Lapid.*

SAINT DIDIER (GUILLAUME) a French poet of the last century, who was a knight of the order of St Lazarus. He was the author of an epic poem entitled "Clovis," which was published at Paris, with a dedication to the king, (Louis XV.), in 1725, 8vo.—*Stoll. Introd. in Hist. Lit.*

SALT (HENRY) a distinguished traveller and philological writer, who was a native of Lichfield in Staffordshire. He was educated in the public grammar-school in that city, and having acquired a knowledge of drawing, he accompanied lord Valentia in his travels in the Levant, Egypt, Abyssinia, and the East Indies, and furnished the graphic illustrations by which the "Voyages and Travels" of that nobleman were illustrated. He was subsequently employed by government, as the bearer of presents to the emperor of Abyssinia; and the result of his observations in the execution of this mission appeared in his "Account of a Voyage to Abyssinia, and Travels in the Interior of the Country in 1809 and 1810," 1814, 4to. This work contains an account of the Portuguese settlements on the eastern coast of Africa, as well as most complete and accurate information relative to the country which was the more immediate object of his inquiries; and his statements, from personal observation, served to establish the veracity and confirm the narrative of his celebrated predecessor

S A U

Bruce. Mr Salt was afterwards appointed British consul in Egypt, in which country he long resided, interesting himself greatly in the proceedings of scientific travellers who repaired thither, and especially in those of Belzoni, whom he supplied with the means of prosecuting his curious and important researches. His death took place August 30, 1827, at a village between Cairo and Alexandria. Mr Salt was the author of "An Essay on Dr Young's and M. Champollion's Phonetic System of Hieroglyphics, with some additional Discoveries by which it may be applied to decipher the Names of the Ancient Kings of Egypt and Ethiopia," Lond. 1825, 8vo.—*Biog. Dict. of Living Authors. Gent. Mag.*

SALTMARSH (JOHN) an antinomian divine, was a native of Yorkshire, and studied at Magdalen college, Cambridge. He took his degrees in arts, and entering into orders became chaplain in the army under Fairfax, and minister of Brasted in Kent. He then settled at Ilford in Essex, and died there in 1647. His works made a great commotion when they appeared, and were answered by many writers of importance: they are, "Sparkles of Glory;" "Dawnings of Light;" "The Smoke in the Temple;" "Shadows Flying Away;" "Free Grace, or the Flowings of Christ's Blood freely to Sinners;" "Wonderful Predictions."—*Wood.*

SALVINI (ANTONIO MARIA) an eminent critic, was born in 1654 at Florence, where he became professor of Greek. He was a member of the academy Della Crusca, and took a part in their Dictionary. He was the author of Italian translations of Hesiod, Homer, Anacreon, and Theocritus; also of a version of Addison's Cato, and Letters from Italy. His compositions were published, the prose in 2 vols, 4to, and the poems in one. He died in 1729.—His brother was a canon of Florence, and was the author of "Fasti Consolari dell' Accademia Fiorentina," &c.—*Fabroni.*

SAUNDERS (JOHN CUNNINGHAM) a surgeon, was born at Loirstone in Devonshire, in 1773. After serving his apprenticeship at Barnstaple he became a pupil of St Thomas's hospital, where he was made demonstrator of anatomy. He was particularly distinguished for his skill in diseases of the eye, for which in 1804 he instituted an infirmary. He died of apoplexy in 1810. His works are, "On

the Anatomy and Diseases of the Ear," 1 vol, folio; "An Essay on the Inflammation of the Iris;" and some papers on the disorders of the eye, which were published after his death.—*London Medical Journal*.

SAUNDERS (WILLIAM) an eminent physician and medical writer, who was a fellow of the Royal college of London, and senior physician to Guy's hospital. Besides other works, he published "Observationes de Antimonio ejusque usu," 1773, 8vo, of which a German translation was published at Altenburg, in 1775; "Observations on the Efficacy of the Red Peruvian Bark in the Cure of Agues and other Fevers," 1782, 8vo, which was also translated into German; "Observations on the Mephitic Acid," 1777; "A Treatise on the Structure, Economy, and Diseases of the Liver," 1793, fourth edition, 1809, 8vo; the "Harveian Oration," 1796; "On the Chemical History and Medical Powers of some of the most celebrated Mineral Waters, with Practical Remarks on Aqueous Regimen; to which are added, Observations on the Use of Cold and Warm Bathing," 1800, second edition, 1806, 8vo; and "A Treatise on the Hepatitis of India," 1809, 8vo. Dr Saunders died in 1819.—*Biog. Dict. of Living Authors. Ed.*

SAVERY (THOMAS) an English officer and engineer, distinguished for the share which he had in the invention of the steam-engine. (See *NEWCOMEN*.) Captain Savery obtained the post of surveyor of the works at Hampton Court, and he died May 30, 1715.—*Orig.*

SAY (JEAN BAPTISTE) a distinguished writer on political economy, who was born at Lyons in 1767. He is said to have been descended from William de Say, one of the adventurers who accompanied the Norman conqueror in his successful expedition to England, where he became the founder of the noble family of Saye and Sele; but the subject of this article derived his celebrity not from illustrious birth or ancestry, but from the happy exertion of his natural talents. His father was a respectable merchant, who removed from Lyons to Paris about the commencement of the French revolution. The son was educated with a view to the pursuit of commerce, in which he was for some time engaged, but which he at length quitted to devote himself entirely to literature. Like many other men of genius, he first essayed his powers in poetical effusions, becoming a contributor to the "*Almanack des Muses*." Shortly after he was employed, under the direction of Mirabeau, in conducting the *Courier de Provence*, the great object of which work was to lower the privileged orders, and especially the aristocracy, in the estimation of the French people. Say next became secretary to Claviere, the minister of finance. Alarmed by the stormy violence of the revolution, he now retired from public life, and with a view to excite an interest among his countrymen in favour of literature and science, he set up, in conjunction with Champfort and Ginguené, a periodical publication

entitled "*Décade Philosophique, Littéraire, et Politique*," which undertaking was attended with brilliant success. He was, however, very soon deprived of the aid of his two associates by the revolutionary persecutions; but he was joined by several others, as Andrieux, Amaury-Duval, &c., with whose aid he continued the journal, which became one of the most remarkable literary productions of that period. The situation which M. Say occupied as the conductor of this work rendered him the object of public attention; and when Buonaparte was about to proceed on his expedition to Egypt, he employed the editor of the *Décade Philosophique* to collect such books as would form a library of information requisite for the purposes which the projector of the undertaking had in view. This intercourse with the destined ruler of France procured for M. Say admission into the tribunate on the first formation of that body. He did not, however, at all distinguish himself in that assembly; and he subsequently accounted for the silence he then preserved, by declaring his conviction of a total want of power to oppose with any effect a political system which he entirely disapproved. Conceiving that he could develop his ideas with more advantage by means of the press than from the tribune, he began the composition of his "*Traité de l'Economie Politique, ou Simple Exposition de la Manière dont se forment, se distribuent, et se consomment les Richesses*," 2 vols, the first edition of which appeared in 1802, and which laid the foundation of that high celebrity which the author attained, as a political economist, both at home and abroad. After the 18th Brumaire Say refused to vote for the establishment of the imperial despotism in France, in the person of Buonaparte; in consequence of which he was excluded from the tribunate, but was shortly after appointed receiver of the assessed taxes (*les droits réunis*) for the department of Allier, which post he soon resigned, from conscientious scruples, being, as he declared, "unwilling to assist in impoverishing his country." He then established a manufactory at Lyons, in which it appears that he did not meet with success; but he was not induced by the failure to resume his political career, the remaining part of his life being wholly devoted to scientific pursuits, as more agreeable to his inclinations, and probably better suited to the peculiar talents which he possessed. His *Treatise on Political Economy* is the most important of his productions, and that which has contributed to make his name celebrated throughout Europe. When it first appeared, but few persons in France, and yet fewer in any other part of the continent, paid attention to economical science; and though Dr Adam Smith's *Wealth of Nations* had been translated into French it was but little read or understood, and the labours of his predecessor Quesnay and other early economists were almost forgotten. Buonaparte discountenanced the study of nearly all except the mathematical sciences, and his influence of course had a considerable effect on public opinion. M.

Say's work nevertheless made a great impression, and excited a general attention to the subject to which it relates. Its value has been freely and candidly admitted by the most distinguished economical writers in this country, and especially by Mr Ricardo and Mr McCulloch, the former of whom has thus noticed the work:—"The *Traité d'Economie Politique* of M. Say would deserve to be respectfully mentioned in a sketch of the progress of political economy were it for nothing else than the effect his well-digested and luminous exposition of the principles of Dr Smith has had in accelerating the progress of science on the continent. But in addition to the great and unquestionable merit that it possesses, from its clear and logical arrangement, and the felicity of many of its illustrations, it is enriched with several accurate, original, and profound discussions." In 1820 M. Say was elected *Professeur d'Economie Industrielle* at Paris; and he gave a course of lectures embracing a system of political economy considered in a practical point of view. After the revolution which led to the establishment of the present French government, Say was invited to accept the professorship of political economy, then newly founded in the *Collège de France*; and he was also professor of the science at the *Conservatoire des Arts et des Metiers*. He died at Paris, November 14, 1832, in consequence of an attack of illness which took place only the preceding day. Besides his great work, already mentioned, which has passed through numerous editions, and has been translated into most of the European languages, M. Say was the author of "*Olbia, ou Essai sur les Moyens de réformer les Mœurs d'une Nation*," 1800; "*Observations sur l'Angleterre et les Anglais*," 1815; "*Catéchisme d'Economie Politique*," 1815; "*Petit Volume, contenant quelques Apperçus des Hommes et de la Société*," 1817; "*Lettres à Malthus, sur différens Sujets d'Economie Politique*," "*Cours complet d'Economie Politique pratique*," 1829, 6 vols. He also contributed notes to a republication of Storch's *Course of Political Economy* at Paris; and to a translation of Ricardo's *Principles of Political Economy and Taxation*. This celebrated writer is said to have exhibited in his private life a model of the domestic virtues. After having lived amidst the storms of the revolution, under the despotic sway of Napoleon, that of the restored Bourbons, and the constitutional government of Louis-Philippe, he preserved an unsullied character, though assailed by trials and temptations which have left stains on the reputation of every man of feeble virtue among his conspicuous contemporaries. He kept aloof from public life, but was the friend and confidential adviser of some of its brightest ornaments; and few have contributed more, though in a private station, to keep alive in the hearts and the contemplation of men a lofty standard of public virtue.—*New Month. Mag. For. Quart. Rev. Biog. des Contemp.*

SAYERS (Dr FRANK) an ingenious writer on polite literature, who practised as a physi-

cian at Norwich, where he was highly respected for his talents and character. He was one of the associates of Dr Parr while that learned writer was master of the grammar-school of that city; and he was intimate with the Rev. Thomas Fanshawe Middleton, afterwards bishop of Calcutta, and with other distinguished literary characters. In 1790 he published "*Dramatic Sketches of the Ancient Northern Mythology*," 4to; and in 1793, "*Disquisitions Metaphysical and Literary*," 8vo. He was also the author of "*Miscellanies Antiquarian and Historical*," 1805, 8vo; and "*Nugæ Poeticæ*," 1808, 8vo. Several of his early productions in prose and verse were republished together in 1792, and again in 1803. His death took place in 1817. Though none of Dr Sayers's productions are of considerable extent, yet they display a spirit of research, variety of information, and correctness of taste and judgment, which render them extremely valuable.—*Orig.*

SCARPA (ANTONIO) a celebrated anatomist, who was a native of Friuli, in Italy. He was born in 1745, of an obscure family, in low circumstances, but through the assistance of a distant relative he was enabled to indulge his inclination for study with a view to the medical profession. The premature death of his protector left him ere long to his own resources, but his ardent desire of knowledge enabled him to surmount the difficulties in which he became involved, and ultimately to qualify himself for the profession he had chosen, and which he was destined so highly to adorn. At an early age he produced his first work, "*A Treatise on the Anatomical Structure of a part of the Organ of Hearing, called Fenestra Rotunda*," which excited the attention of his scientific contemporaries. It was followed some time after by "*A General Treatise on the Organs of Hearing and Smelling*," Pavia, 1789; and this added greatly to his reputation as an anatomist. He obtained the professorship of anatomy and surgery in the university of Pavia; and when his academical brethren threw themselves at the feet of Buonaparte after the battle of Marengo, Scarpa disdained to follow their example, and he alone was absent from the humiliating scene, a circumstance which the victorious leader of the French army did not fail to notice. The professional skill and science of this distinguished individual were not less highly appreciated in Germany than in his native country. When one of the wives of the present emperor of Austria (who has been repeatedly married) was seized with dangerous illness, during the war between France and Germany, a flag of truce was sent with a request or demand for the services of Scarpa; in consequence of which he crossed the Tyrol, occupied as it was by hostile armies, being transferred under a military escort from the French outposts to those of the Austrians, and similar formalities were observed on the other side, when he returned from Vienna. As an anatomist Scarpa made himself known throughout Europe by his admirable descrip-

tion of the nerves in his "Tabulæ Necrologiæ," published in 1794. He then produced "A Commentary on the Internal Structure of the Bones;" and in 1800 appeared his "Essay on the Principal Diseases of the Eyes," which not only passed through several editions in the original, but was also translated into English and various other languages. In this work he successfully advocated the operation of couching for the cataract, as preferable to the method of removing the diseased crystalline humour by extraction, generally practised in consequence of the recommendation of the English surgeon Pott. In 1804 professor Scarpa published "A Treatise on Aneurism;" and in 1809 "A Treatise on Hernia;" both which works have been translated into English by John Henry Wishart. He likewise wrote on lithotomy, hydrocele, deformities of the spine, and other subjects. His talents procured him admission into the Italian Institute, and he was a foreign associate of the Academy of Sciences at Paris, and a fellow of the Royal Society of London. He died at Pavia, October 31, 1832, in consequence of a disease of the bladder. This highly talented physiologist is said to have possessed an exquisite taste for the fine arts; and he had formed a noble collection of paintings by the Italian masters. The museum of Pavia owes to Scarpa a great portion of its valuable contents. He spoke several languages, but gave the preference to the Latin, which he wrote with facility. His agreeable manners and amiable disposition procured him general esteem; and his mode of living being simple and unostentatious, he left at his death a large fortune, the result of his professional skill and industry.—*New Month. Mag. For. Quart. Rev.*

SCHANK (JOHN) a distinguished naval officer, born in Fifeshire in Scotland, in 1740. He went to sea in the British service when young, and in the American war he was employed on the lakes of Canada, where he displayed great talents both as a seaman and engineer. Returning home on peace taking place, he obtained the rank of post-captain. He devoted his leisure to the improvement of naval architecture; and in 1793 he published a treatise on a method which he had invented of navigating vessels in shallow water by means of sliding keels. He contributed to the foundation of the Society for the Encouragement of Naval Architecture; and in 1794 he was nominated agent of transports. He subsequently was employed as an engineer in superintending the defence of the eastern coast of England. On the establishment of the Transport Board he was made one of the commissioners; in 1805 he was raised to the rank of admiral; and in 1822 to that of admiral of the blue. His death took place at Dawlish in Devonshire, in June 1823. Admiral Schank distinguished himself by several ingenious inventions, and he wrote some memoirs on ship-building.—*Gent. Mag.*

SCHÆLSTRATE (EMANUEL DE) chanter of Antwerp, then keeper of the library of the

Vatican, and canon of St Peter's at Rome, was born in 1649, and died in 1692. He wrote "Ecclesia Africana sub Primate Carthaginiensi," 4to; "Antiquitates Ecclesie illustratæ," 2 vols, folio; "Acta Constantinensis Concilii," 4to; "De Disciplina Arcani contra Ernesti Tentzelii," 4to; "Acta Ecclesie Orientalis contra Calvinum et Lutherum," 4 vols, folio.—*Moreri.*

SCHICKARD (WILLIAM) professor of Hebrew at Tübingen, wrote some erudite works, the chief of which were, "Horologium Ebraeum Schickardi," 8vo; "De Jure Regie Judæorum," 4to; "Series Regum Persiarum," 4to. He died of the plague in 1632.—*Ibid.*

SCHIRACH (ADAM THEOPHILUS) a German naturalist and divine, who was pastor of the village of Klein-Bautzen in Lusatia, where he died in 1773. He was the author of several tracts on the natural history of the bee, and founded an agricultural society, which led to the several similar institutions which have since taken place. His principal work is entitled "A Treatise on the Bees of all Countries," Zittau and Leipsic, 1768, 4to.—*Diet. Hist.*

SCHLEGEL (FREDERIC) a celebrated German writer on philology and criticism, who was a native of Hanover. He was born in 1772, and was the son of the superintendent general of the principality of Luneburg, and younger brother of Augustus William Schlegel, the distinguished author of "Lectures on Dramatic Literature," and of a German translation of the works of Shakspeare. The subject of this article was sent to Leipzig when young, with a view to his receiving education which would qualify him for commercial pursuits, but his inclination led him to adopt literature as a profession. His earliest efforts appear to have consisted of critical articles in various periodical journals, but his first production of any importance was the "History of the Poetry of the Greeks and Romans," which commanded the approbation of the celebrated professor Heyne. He then joined his brother in conducting a periodical entitled the "Athenæum;" and his next production was the philosophical romance of "Lucinda," which became extremely popular. He afterwards turned his attention to poetry and the drama, and published the poem of "Hercules Musagetes," and the tragedy of "Alarcon." At the age of thirty he visited Paris, where he gave a course of philological lectures; and he published notices and extracts relative to Joan of Arc, and essays on the language and philosophy of the Indians. In 1804 he published a "Collection of the Romantic Poetry of the Middle Ages," 2 vols, 12mo. In 1808 he returned to Germany, and entered into the service of the emperor of Austria, who sent him to reside at the head-quarters of the archduke Charles, as aulic secretary. After the termination of the war he resumed his literary pursuits, and delivered courses of lectures on modern history, published at Vienna in 1811; and also "Lectures on the History of Ancient and

Modern Literature," Vienna, 1815, 2 vols, which last work has been translated into several modern languages. By the composition of several diplomatic papers he obtained the patronage of prince Metternich, through whose interest he was promoted to the office of Austrian Councillor of Legation at the Germanic Diet, which he held during the remainder of his life. He died at Vienna, in the latter part of the year 1828. Among his works, besides those already mentioned, are "Lothaire and Maller," a romance of chivalry, 1806, and poems; he also translated into German the "Corinne" of Madame de Stael, and for some time conducted the German museum. F. von Schlegel married a daughter of Moses Mendelssohn, the celebrated Jewish philosopher.—*Month. Mag.*

SCHMAUSS (JOHN JAMES) historian and publicist, was born at Landau in 1690. He was educated at Halle, and commenced a life of literary labour at the age of twenty-two, from which he was relieved by the margrave of Baden-Durlach, who gave him official employment at his court. In 1731 he was appointed by George II professor of history at the university of Gottingen, where he died in 1747. He has been regarded as one of the creators of the science of political relations; and during the twenty-six years that he presided at Gottingen, it was regarded as a school of diplomacy for the youth of the greatest families in Europe. Among his principal works, which are for the most part in the German and Latin languages, are, "A Sketch of the History of the Empire," Leipsic, 1720, 8vo; "Corpus Juris publici Academicum," Leipsic, 1722, 8vo; "Corpus Juris gentium Academicum," Leipsic, 2 vols, 8vo; "Introduction to the Science of Politics," 1741—1747, 2 vols, 8vo; "Elements of the Public Law of the Empire," 1746—1782; "Description of the actual Government of the Empire," 1755, 8vo.—*Dict. Hist.*

SCHMIDEL (ULRIC) a German voyager of the sixteenth century, who formed a part of the expedition to America under Mendoza in 1534, and who assisted at the foundation of the town of Buenos Ayres, and took great part in the reduction or rather extermination of the surrounding Indians. He returned to Europe in 1553, and composed in German an account of his travels and adventures, which has been translated into Latin by Hulsius, under the title of "Vera Historia Admirandæ cujusdam Navigationis quam Huldericus Schmiel Straubergensis, ab anno 1534 usque ad annum 1554, in Americam vel Novum Mundum, juxta Braziliam et Rio de la Plata, confecit," Nuremberg, 1559, 4to.—*Dict. Hist.*

SCHOOCKIUS (MARTIN) professor of rhetoric, history, philosophy, and languages, at Utrecht, where he was born in 1614, and afterwards at Frankfort on the Oder, where he died in 1665. His works were collected with the title of "Exercitationes Varie," 4to; they consist of tracts on singular subjects.—*Niceron.*

SCHOREL (JOHN) a painter, was born at

Schorel in Holland, and died in 1572. He was a pupil of Albert Durer. He made a pilgrimage to the Holy Land, and made drawings of the most remarkable scenes there. He was afterwards employed by Adrian VI, and several monarchs of Europe.—*Dict. Hist.*

SCHULTZE (ERNEST) a distinguished German poet, who was born in 1787, and died in 1817. He was the author of "Cæcilie, Romantisches Gedicht, in zwanzig Gesängen," 2 vols, 8vo; and another poetical romance, entitled "Die Bezauberte Rose," 8vo; and he also wrote elegies.

SCHWARTZENBURG (CHARLES PHILIP, prince) an Austrian field-marshal, was born of an ancient and illustrious family at Vienna, in 1771. He early entered into the army, and rapidly proceeded through all the grades of military rank until he became a general officer. After serving two campaigns against the Turks, he was employed in the first campaign against the French, in the war which followed the execution of Louis XVI. On the death of the emperor Paul, in 1801, he was sent to St Petersburg to congratulate Alexander on his accession. He served under general Mack in 1805; and succeeded in withdrawing the cavalry under his command from the consequences of the capitulation of Ulm. He also took a share in the battle of Austerlitz, which was fought against his advice, as well as in that of Wagram. At the peace of Vienna he was nominated ambassador to the court of France, at which time he gave the unfortunate fête at Paris in which his princess lost her life by a fire that accidentally occurred during the festivities. In 1812 he was appointed to the command of the auxiliary force of 30,000 Austrians, extorted by Napoleon in aid of his disastrous invasion of Russia. The conduct of this force in the French reverses is well known. In 1813 he was invested with the rank of field-marshal, with the commandership-in-chief of all the armies allied against France. On the return of Buonaparte from Elba, he was again intrusted with the command of a great portion of the allied forces; and at the conclusion of the war, was named president of the aulic council of war; which post he occupied until his death, in October, 1820. The French writers affect to regard the military abilities of this Austrian general as far below his reputation; but if not a brilliant, all circumstances seem to prove him an able commander, and highly serviceable to his country both in the cabinet and the field.—*Dict. Hist.*

SCOTT (DAVID) an historian, was born near Haddington in East Lothian, in 1675, and studied the law at Edinburgh. He afterwards became a nonjuror, in consequence of which he was imprisoned. He wrote a "History of Scotland," in folio, and died in 1742.—*Gen. Biog. Dict.*

SCOTT (HARRIS) an eminent physician, who was the son of a Scottish clergyman, and was educated at Aberdeen and Edinburgh. He then visited London, whence he proceeded to Venice, with an intention to travel overland

to India. His pecuniary resources failing, he returned to England and married. Subsequently obtaining an appointment at Bombay, he went thither, and realized a considerable fortune by his professional practice, which he relinquished to go to New South Wales. Dr Scott distinguished himself by his experiments on the use of the mineral acids in syphilitic and other complaints; and he was the author of an ingenious romance entitled the "Adventures of a Rupee." He died on his voyage to New South Wales, November 16, 1821.—*Biog. Univ.*

SCOTT (JAMES) an episcopal divine, distinguished as an eloquent preacher. He was born at Leeds in 1733, and was the son of one of the domestic chaplains to Frederick prince of Wales. He went to the university at Cambridge in 1752, and after studying a short time at Catherine Hall, he removed to Trinity college, where he took the degree of BA, and in 1757 he obtained a fellowship. Soon afterwards he became lecturer at St John's church, at Leeds, where he remained till 1760. In the course of the next two years he gained a prize at the university, for a poem on Heaven, a second for a moral epistle on Purity of Heart, and a third for a Hymn to Repentance. He also published some poetical compositions, among which was one entitled "Redemption, a Monody." He then obtained the curacy of Edmonton, where he continued about twelve months, and returning to Cambridge at the end of that time, he rapidly rose to great eminence as a preacher, and became extremely popular. In 1765, at the suggestion of the earl of Halifax, he wrote some political letters, which appeared in the Public Advertiser, under the signature of Anti-Sejanus. Three years afterwards he removed to Leeds, to officiate as lecturer to Trinity church, where his pulpit oratory attracted large congregations. In about a year he went back to London, and resumed his pen as a political partisan, writing in the public journals under the signature of "Old Slyboots." In 1771, through the interest of lord Sandwich, he was presented to the rectory of Simonburn, in Northumberland, where he soon became involved in litigation with his parishioners, on the subject of tithes. A suit at law which he commenced in 1774, after having been carried on for twenty years, at an enormous expense to both parties, terminated in the relinquishment of the claims which he sought to establish. These proceedings not only offended his parishioners but excited such a rancorous hostility against him, that, at length, his life being endangered, he removed to the metropolis, where, after having much increased his reputation as a preacher, he died December 10, 1814.—*Georgian Era.*

SCOTT (JOHN) an ingenious writer, who was the original editor of the London Magazine. After the restoration of the royal family he went to France, and on his return published "A Visit to Paris in 1814, being a Review of the Moral, Political, Intellectual, and Social Condition of the French Capital," Lon-

don, 1815, 8vo; and he was also the author of "Paris Revisited in 1815, by way of Brussels, including a Walk over the Field of Waterloo," 1816, 8vo; and "The House of Mourning," a poem on the death of the author's son. In January 1820 he commenced the publication of the London Magazine, which he conducted with great success till the beginning of the following year. His remarks on some articles in Blackwood's Edinburgh Magazine having given offence to the editor of that work, a quarrel took place; and Mr Scott, after refusing to accept the challenge of the individual whose displeasure he had provoked, was wounded in a duel with a friend of that gentleman on the 16th of February, 1821, and he died a few days after, leaving a widow and two children. A volume of "Observations during a Journey on the Continent," appeared after his death.—*London Magazine.*

SCOTT (THOMAS) an eminent evangelical clergyman of the established church, who was born in 1747 at Braytoft in Lincolnshire, and was the son of a farmer. After having acquired some acquaintance with classical learning, he was, at the age of sixteen, apprenticed to a surgeon and apothecary at Alford in his native county. In this situation he stayed only two months, and then returning home he was employed in his father's business. Having a strong inclination to enter into the church, he applied himself closely to study, and obtained a considerable knowledge of both the Latin and Greek languages. In 1773 he was ordained by Dr Green, bishop of Lincoln, and for some time he held the curacies of Weston Underwood and Ravenstone in Buckinghamshire. Becoming acquainted with Mr Newton, curate of Olney, and afterwards minister of St Mary Woolnoth, London, he was converted to Calvinism, in the defence of which, both from the pulpit and the press, he greatly distinguished himself. In 1781 he removed to Olney, and in 1785 to London, having obtained the chaplainship of the Lock chapel, near Hyde-park-corner. In 1801 he was appointed rector of Aston Sandford in Buckinghamshire, where he died April 16, 1821. He published, in 1799, a sort of autobiographical tract, entitled "The Force of Truth," 8vo, which was followed by several single sermons, and other works; but his principal productions are a "Defence of Calvinism," against bishop Tomline; and a "Commentary on the Bible," 6 vols, 4to.—*Gent. Mag.*

SCOTT (Sir WALTER) was one of the sons of Walter Scott, Esq. writer to the signet, by Anne, daughter of Dr John Rutherford, professor of the practice of medicine in the university of Edinburgh. He was born at Edinburgh on the 15th of August, 1771, being the birthday of the great European hero, whose deeds he was afterwards to record. It appears, that before he could receive any impressions from the romantic scenery of the Old Town of Edinburgh, he was removed, on account of the delicacy of his health, to the country, and lived for a considerable period under the charge

of his paternal grandfather, at a farm-house called Sandyknowe, overlooking a considerable part of the vale of the Tweed. In the immediate neighbourhood of the farm stood the border fort called Smailholm tower, which possessed many features to attract the attention of the young poet. It is understood, that at the "evening-fire" of Sandyknowe, he acquired much of that border love which he afterwards wrought up in his works of fiction. The first seminary which he attended was one for English and other ordinary branches of education, kept at Edinburgh by a Mr Leechman; and he subsequently entered Fraser's class at the High School, and after two years' instruction he was transferred, in October, 1781, to the rector's class, then taught by Dr Alexander Adam. It does not appear that he ever became remarkable for proficiency as a scholar, since he ranked only the eleventh in the rector's class at the time that he quitted the High School, in 1783. He wished at that early period of his life to enter into the army, but the illness, which had beset his early years, would have rendered this wish unavailing, even if it had been agreeable to his friends; his malady having had the effect of contracting his right leg, so that he could hardly walk erect, even with the toes of that foot upon the ground. An attempt was made about the same time to give him instructions in music, which used to be a branch of ordinary education in Scotland; and he was therefore put under the tuition of Mr Alexander Campbell, then organist of an episcopal chapel in Edinburgh. Mr Campbell's efforts, however, were entirely useless; and he dismissed his pupil in a short time, with a declaration that he was totally deficient in that indispensable requisite to a musical education—an ear for harmony. On quitting the High School, he entered as a student of the university of Edinburgh, October, 1783. But there is reason to believe that the precarious state of his health prevented due attention to his academical studies. It appears that he matriculated under the professors of the learned languages and of logic; but it has been said that, like Shakspeare, "he possessed but little Latin and less Greek." While at the High School, he made his first attempt in original versification, the subject being a thunder-storm, which he happened to witness as he and his companions were amusing themselves in their play-ground. The poem consisted only of six lines; but when he repeated it, on his return home, to his mother, it produced a deep impression of pleasure and pride in her bosom, so that, after he had retired from her presence, she could not help addressing a person, who was near her, in the exclamation of the most passionate nature, respecting the promising intellect of her child. At that critical period of life, when the amusements and studies of youth should be exchanged for more serious employment and graver cares, the subject of this article was confined by long illness. The danger to be apprehended from the rupture of a blood-vessel, at the age of fifteen, rendered

rigorous confinement and abstinence requisite; and the young patient being obliged to keep his bed, and interdicted from speaking, had scarcely any resource but books, which he procured from an extensive circulating library, which had been founded at Edinburgh by Allan Ramsay, the Scottish pastoral poet. Under these circumstances, it seems, he perused almost all the old romances, old plays, and epic poetry the library contained; and the effect of this course of reading is sufficiently perceptible in the works which have immortalized his name. About his sixteenth year his health experienced a sudden but most decisive change for the better. Though his lameness remained the same, his body became tall and robust, and he was thus enabled to apply himself with the necessary degree of energy to his studies for the bar. At the same time that he attended the lectures of professor Dick on civil law in the university, he performed the duties of a writer's apprentice under his father, as the most approved method by which a barrister could acquire a technical knowledge of his profession, though not uniformly practised. It has sometimes happened that when a young man of considerable abilities was coming forward to the bar, he was preceded by a kind of crepuscular fame, resulting from his exhibitions, either at college, or in the debating societies in which the youth of Edinburgh were accustomed to try their powers of reasoning and eloquence; but Walter Scott had no prestige of this kind. He was merely known as an abstracted young man, very much given to reading, of a different kind from that with which other persons of his age are usually conversant. On the 10th of July, 1792, when on the point of completing his twenty-first year, he passed advocate with the usual forms. Although he could speak readily and fluently at the bar, his intellect was not at all of a forensic cast. He appeared to be too much of the abstracted and unworldly scholar, to assume readily the habits of an adroit pleader; and even though he had possessed competent ability, yet his reputation was not such as would have induced the generality of agents to intrust the affairs of their clients to his management. During the earlier part of the time he was employed as a barrister, he was constantly studying either one branch of knowledge or another; though he seems to have been seldom if ever tempted to deviate from study into composition. From his earliest years, his political leanings were towards Toryism, or, as it has been explained, that principle which disposes men to wish for the permanence of existing institutions, and the continuance of power in the hands which have heretofore possessed it. At the time when he entered on public life, such sentiments prevailed among the higher classes of the community, from an apprehension that the British constitution was threatened with danger from the progress of the revolution in France. Hence bodies of volunteers were formed, for the purpose of defence against invasion from that country, and also to repress in-

testine commotions. In the beginning of the year 1797, the gentlemen of Mid-Lothian were led to imitate the example set before them in other districts, and to embody themselves into a cavalry corps. To this association, which assumed the designation of the Royal Mid-Lothian Regiment of Cavalry, Walter Scott was appointed adjutant, for which office he was considered as qualified, notwithstanding his lameness, especially as he happened to be a remarkably graceful equestrian. He became a very active officer, and was extremely popular in the regiment, on account of his good humour and powers of social entertainment. Adjutant Scott composed a war song, as he called it, for the Mid-Lothian cavalry, afterwards published in the "Border Minstrelsy;" and at the same time he became known, within a small circle, as a person possessing poetical abilities. In 1796 he made his first appearance as a candidate for poetical fame, by publishing a translation of two ballads written by the German poet Burger, one of which, entitled "Leonora," (or "William and Helen,") had attracted much attention at that period, and several versions of it had been printed by different persons. Mr Scott's production appeared in a thin quarto, with the title of "The Chase; and William and Helen," Edinburgh. The fate of this, his earliest publication, was by no means flattering. He distributed so many copies among his friends, as to materially interfere with the sale, so that the adventure proved a decided loss. The young author, however, was not dispirited by the failure of his attempt to interest the public, for, early in 1799, he published "Goetz of Berlichingen," a tragedy translated from the German, (of Goethe,) London, 8vo. The ballad called "Glenfinlas" was his first original poem. After which he undertook another ballad, called "The Eve of St John;" which was composed in consequence of some accidental circumstance that induced him to promise that he would make a ballad, of which the scene should lie at Smailholm tower. The ballad was approved of, as well as "Glenfinlas;" and they procured him many marks of attention and kindness from the distinguished book-collector, John, duke of Roxburgh. In December, 1797, the poet married Miss Margaret Charlotte Carpenter, the daughter of John Carpenter, Esq. of Lyons, in France. Having taken up his residence at Leppewade, south of Edinburgh, he was accustomed occasionally to make what he called "raids" into Liddesdale, for the purpose of collecting the ballad poetry of that romantic and most primitive district. It was not only necessary on these occasions to write down old ballads from recitation, but the prospective editor also thought proper to store up the materials of notes, by which the ballads themselves might be illustrated. On this account he visited many scenes alluded to in the metrical narratives, and gathered all the local anecdotes and legends which had been preserved by tradition among the peasantry. In making his memorandums, he used neither

pencil nor pen, but, seizing on any twig or piece of wood which he could find, marked it, by means of a clasped knife, with various notches; and these were preserved to aid him in his future studies. He was, in fact, as may be hence inferred, blessed with a memory of extraordinary power, so that a very slight notation was necessary to bring to his recollection any thing that he had ever heard. Of this, proof is given in the memoirs of Mr James Hogg, who states, that while on a fishing party with the subject of this article, and another gentleman, Mr Scott repeated, without missing a word, a ballad of eighty-eight stanzas, which Mr Hogg had composed some time before, but which had not been committed to paper, and which the reciter had never heard but once. On another occasion, when he was out on a party of pleasure on the Forth, to amuse the company he recited one of Southey's ballads, ("The Abbot of Aberbrothock,") with equal accuracy, though his knowledge of it was entirely derived, as in the former case, from having once heard it from the recitation of the author. Mr Scott's Liddesdale collections, joined to various contributions from reciters in other parts of the country, formed the basis of his first publication of any note, "The Minstrelsy of the Scottish Border." This work issued, in 1802, from the printing press of his friend, Mr James Ballantyne of Kelso. It displayed, both in the text and notes, a vast quantity of curious and abstruse learning; and indicated a most intimate acquaintance with a district in Scotland which had previously attracted but little attention, from either the historian or the antiquary. Previous to this period, in December, 1799, he had obtained, through the influence of friends, the Crown appointment of Sheriff-depute of Selkirkshire, to which was attached a salary of 300*l.* a year; and he then removed to Ashisteil, on the banks of the Tweed. In 1804, Mr Scott increased his reputation as a literary antiquary, by publishing the ancient minstrel tale of "Sir Tristram," composed by Thomas of Ercildoune, a poet of the thirteenth century. In 1805 appeared "The Lay of the Last Minstrel," which may be regarded as the first work in which the writer laid his claim to be considered as an original author. About this time he obtained the reversion of the honourable and easy office of Principal Clerk in the Court of Session. He had been encouraged to apply for the appointment in question not long before the death of Mr Pitt, having made an arrangement with Mr George Home, who had long held the office, and was desirous of retiring, and who was to retain the emoluments attached to it during the remainder of his life. Mr Scott's wishes were acceded to, and it has been stated that George III, when he signed the commission, observed, "that he was happy he had it in his power to reward a man of genius, and a person of such distinguished merit." After the signature of the document some delay was caused by the death of the minister, Mr Pitt, which happened January

25, 1806. It has been generally supposed that Mr Scott was indebted for the ultimate attainment of his wishes to the favour of the new administration then formed, at the head of which was Mr Fox, the leader of a political party, whose opinions the former always opposed. But though this was not the case, the circumstances that really occurred were equally honourable to the new candidate for office and the ministry. Mr Fox no sooner heard of the obstruction to the passing of the grant than he gave directions for accelerating it, wishing it should be considered as a favour coming directly from his administration. But application had previously been made, through lord Stafford and lord Somerville, to earl Spencer, for the indulgence usual on a change of ministry, relative to the passing of a grant already in progress; and the request was at once complied with as a matter of justice. Mr Scott, when informed of Mr Fox's obliging intention, remarked that he would have been proud to owe a favour to that distinguished statesman provided he could have received it without compromising his own political opinions. He continued during five or six years to execute the duties of his office without salary; but at length an alteration of the law relative to the provision for superannuated officers taking place, his predecessor retired on an annuity, and he was allowed to enjoy the profits of his situation, which usually amounted to 1,200*l.* a-year. In 1806 Mr Scott collected his original compositions in the ballad style, and published them under the title of "*Ballads and Lyrical Pieces*;" and the same year appeared a collective edition of his "*Poetical Works*," in 5 vols. In 1808 he brought out his second considerable work, the poem of "*Marmion*," for which he received from his publisher the sum of 1000*l.* This circumstance afforded a topic for satirical animadversion to lord Byron, in his "*English Bards and Scottish Reviewers*;" but the inconsistent satirist probably repented of his severe reprobation of the practice of writing for money, as he subsequently thought proper to engage in a similar kind of traffic for the productions of his own genius. *Marmion* added greatly to the reputation of the author; and it is perhaps on the whole the best of his poetical productions. A few weeks after its appearance, issued from the press, "*The Works of John Dryden*," now first collected; in eighteen volumes. Illustrated with Notes, historical, critical, and explanatory, and a *Life of the Author*. By Walter Scott, Esq." In the biographical part of this undertaking he displayed considerable industry; and though the previous labours of Johnson and Malone had contributed to lighten his task, the additions he made are valuable, especially his view of the state of literature in the time at which Dryden flourished and the age immediately preceding. In the same year he edited "*Captain George Carleton's Memoirs*;" Strutt's "*Queen Hoo Hall*," a romance; and "*Ancient Times*," a drama. In 1809, he assisted the late Mr Clifford in editing "*The*

State Papers and Letters of Sir Ralph Sadleir," which appeared in 2 vols, 4to, with a life of Sir Ralph's, and a great variety of historical notes, which he supplied. In that year he contributed in a similar manner to a new edition of lord Somers's collection of *Tracts*, which appeared in 12 vols, 4to; and he also edited the "*Memoirs of Sir Robert Cary*." He now engaged as a contributor to the *Edinburgh Annual Register*, the first volume of which for 1808 appeared early in 1810, in two parts. It was conducted in a spirited manner for a few years, but was eventually discontinued for want of due support. In the first volume was inserted a well-written paper "*On the Living Poets of Great Britain*," which has been ascribed to Mr Scott, who, if he was the author, seems to have criticised his own productions fairly and impartially. In June 1810, he published a new poetical work entitled the "*Lady of the Lake*," which had extraordinary success. This has been characterised by some as the finest poetical specimen of which his genius was capable. In 1811, appeared "*The Vision of Don Roderick*;" and in 1813 he published "*Rokeby*," which met with a decidedly unfavourable reception. Its ill success induced him to make a bold effort to retrieve his laurels; and in 1814 he published "*The Lord of the Isles*." His object was to enlist the national enthusiasm of the Scots in his favour by a tale of their favourite hero Robert Bruce; but the novelty which had at first formed one of the grand attractions of his style had vanished, and the public appetite for his productions in verse was in some measure satiated. As a sort of experiment or test of his popularity, he published two poems anonymously, entitled "*Harold the Dauntless*," and "*The Bridal of Triermain*;" and the reception of these pieces convinced him that his reputation was not likely to derive any addition by continuing to issue from the press the productions of his fertile muse. Determined, however, to continue his literary career, he resolved to try his skill in the composition of fictitious narratives in prose; a plan that was suggested to his mind by the success of Miss Edgeworth's delineations of Irish life and manners, and his happening to be employed, in 1808, to complete the romance of "*Queen Hoo Hall*," left imperfect by Mr Joseph Strutt. The result of this fortunate resolution was the publication of "*Waverley, or 'tis Sixty Years since*," a tale of the rebellion in 1745. This production appeared in 1814, without the name of the author; and consequently at first it was but little noticed, but after a few months its popularity rose to such a degree as must have fully answered Mr Scott's utmost expectations of success. Previously to this period he removed with his family from Ashestell to an estate which he had purchased near the ruins of the abbey of Melrose, and to which he gave the appellation of *Abbotsford*. Here he erected a mansion-house; and employed his leisure in the improvement of his property by planting and farming. He appears to have been actuated

by a strong passion to become a land proprietor; and he is supposed to have viewed the character of a country gentleman as a higher object of ambition than that of a successful author. Hence he pursued his literary labours with unremitting activity chiefly as supplying the means for increasing an estate that might descend to his posterity. Waverley was succeeded, in 1815, by "Guy Mannerling;" after which followed "The Antiquary," 1816; and the first series of "The Tales of my Landlord," containing the "Black Dwarf," and "Old Mortality;" "Rob Roy," 1818; and the second series of "The Tales of my Landlord," containing "The Heart of Mid Lothian;" and in 1819, the third series of "The Tales of my Landlord," containing "The Bride of Lammermoor," and "A Legend of Montrose." Having thus tried the public curiosity by exhibiting his power as a writer of prose fictions in two distinct series of works, each extending to twelve volumes, he intended to have brought forward his next work ("Ivanhoe") as the production of a new candidate for fame, namely, Lawrence Templeton. But he was diverted from putting his purpose in execution by the appearance of a supposititious work of fiction, presented to the public as a fourth series of the "Tales of my Landlord." To prevent the recurrence of such a fraudulent attempt on his reputation, it was therefore judged advisable that *Ivanhoe* should be published as the composition of the author of Waverley. It issued from the press in 1820; and in the course of the same year appeared "The Monastery," and "The Abbot," the latter being a sequel to the former, and both belonging to the class of historical romances, and relating to the period of Scottish history comprising the reign of the unfortunate Queen Mary, the mother of James VI, and the regency of her brother the earl of Murray. The political prepossessions of Sir Walter Scott, (who had been made a baronet on the accession of George IV.) induced him to delineate the historical personages introduced into his last-mentioned novel in such colours as to offend the feelings or prejudices of a considerable portion of his countrymen; and to this circumstance may be chiefly attributed the sentence passed on these productions, as "the least meritorious of all his prose tales." In the beginning of 1821 appeared a new novel or romance, not of Scottish but of English history, entitled "Kenilworth," completing the number of twelve volumes, all published, if not entirely composed, within the space of twelve months. In 1822 he produced "The Pirate," and "The Fortunes of Nigel;" in 1823 "Peveril of the Peak," and "Quentin Durward;" in 1824 "St Ronan's Well," and "Redgauntlet;" in 1825 "Tales of the Crusaders;" in 1826 "Woodstock;" in 1827 "Chronicles of the Canongate," first series; in 1828 "Chronicles of the Canongate," second series; in 1829 "Anne of Geierstein;" and in 1831 a fourth series of "Tales of my Landlord," containing two tales, "Count Robert of Paris,"

and "Castle Dangerous;" the whole number of his fictitious prose compositions amounting to seventy-four volumes. While thus so industriously employed as a novel writer, he found time for various literary avocations of a temporary or miscellaneous character. He was a contributor to the *Edinburgh Review* during the earlier years of its existence; and subsequently to the *Quarterly Review*, especially in the course of the five or six years preceding his death, when that journal was conducted by his son-in-law, Mr J. Gibson Lockhart. In 1810 he edited the poetical works and correspondence of Anne Seward; and he wrote for the supplement to the sixth edition of the *Edinburgh Encyclopædia*, the articles "Chivalry," "Romance," and the "Drama." In 1814 he edited the works of Dean Swift, in nineteen volumes, with a life of the author; and the same year appeared a splendid work entitled "Border Antiquities," prefixed to which is an elaborate introductory essay, the production of his prolific pen. In 1815 he made a tour through part of France and Belgium; in the course of which he visited the scene of the Duke of Wellington's victory over Buonaparte; and the result of his researches on the spot, and his subsequent reflections, appeared in an interesting volume which he published under the title of "Paul's Letters to his Kinsfolk;" and his poem called "The Field of Waterloo." The same year he produced, in conjunction with Mr Robert Jameson and Mr Henry Weber, a work on *Icelandic Antiquities*. In 1819 he published "An Account of the Regalia of Scotland;" and engaged to furnish the letter-press for a collection of engravings, under the title of "Provincial Antiquities and Picturesque Scenery of Scotland." In 1827 the miscellaneous prose works of Sir Walter Scott were republished in a uniform series, comprising his lives of Swift, Dryden, the British novelists, Sir Ralph Sadleir, Anne Seward, Dr John Leyden, the Duke of Buccleuch, King George III, Lord Byron, the Duke of York, Essays on Chivalry, Romance, and the Drama, and Paul's Letters to his Kinsfolk. In 1828 were published two religious discourses, which he had written some years before for a friend. In the year 1820 Sir Walter Scott displayed the tendency of his political principles in an attempt to prove the absurdity of the popular excitement in favour of a more extended kind of parliamentary representation, in three papers which he inserted in the *Edinburgh weekly journal newspaper*, under the title of "The Visionary." He was also an active supporter, both by means of his purse and his pen, of a weekly journal on high Tory principles, commenced under the title of "The Beacon," but which sunk after an existence of a few months. In 1822 he published "Trivial Poems and Triolets," by P. Carey, with a preface; and the same year appeared his dramatic poem of "Halidon Hill," which though possessing great merit was coldly received. In the following year, he contributed a smaller dramatic

poem, under the title of "Macduff's Cross," to a collection of pieces published by Joanna Baillie. To the list of his poetical works, may here be added, "The Doom of Devorgoil," and "The Auchindrane Tragedy," which appeared in 1830. Among the exalted individuals to whom Sir W. Scott had been recommended by his genius and its productions, was the late King George IV, who was by no means the least warm in his admiration. The poet of *Marmion* had been honoured with several interviews with his sovereign, when prince of Wales and prince regent; and his majesty had, as before stated, in March, 1820, created him a baronet of the United Kingdom. When the king visited Scotland in 1822, Sir Walter Scott, as being in some measure the most prominent man in the country, found the duty imposed on him of acting as a kind of master of the ceremonies on those occasions when his majesty appeared in public. On the evening of the 14th of August, when the vessel that conveyed the king to Scotland cast anchor in Leith Roads, Sir W. Scott went out in a boat as an envoy from the *LADIES OF SCOTLAND*, commissioned to welcome the sovereign to their shores, and to present to him an elegant jewelled cross of St Andrew, to be worn on his breast as a national emblem. When the king was informed of his approach, he exclaimed, "What, Sir Walter Scott? The man in Scotland I most wish to see! Let him come up." He accordingly ascended the side of the ship, and was presented on the quarter-deck to his majesty, to whom he delivered an appropriate address, and presented the cross, which was most graciously received. He then knelt and kissed the king's hand, and he had afterwards the distinguished honour of dining at the royal table. In the arrangements for the king's subsequent residence at Dalkeith, Sir W. Scott bore a conspicuous share; and the whole affair of the royal visit derived much of its interest from the manner in which his taste and genius were exerted on the occasion. Immediately after the termination of this national jubilee Sir Walter Scott was appointed one of the deputy-lieutenants for the shire of Roxburgh, in which his mansion and estate of Abbotsford are situated. In 1825 Mr Archibald Constable, bookseller and publisher at Edinburgh, having projected a cheap series of original and selected works, engaged Sir Walter Scott to compose a "*Life of Buonaparte*." This work was in progress when, in January 1826, Messrs Constable and Company became insolvent. For many years Sir W. Scott had been accustomed to draw bills, at long dates, upon his publishers, in payment for the copy-rights of his works; and as he was occasionally accommodated with their acceptances in reference to works not yet written, he was unfortunately induced to lend his name to other obligations, which were incurred by the house, for the purpose of withdrawing the original engagements. At the unhappy period of commercial distress in 1825, he found himself called on to answer

the demands of creditors of the trading establishments with which his fortunes had been involved, to the amount of no less a sum than 120,000*l*. The estate of Abbotsford had been settled on Sir W. Scott's eldest son on his marriage, and it was therefore beyond the reach of his creditors. By this legal arrangement, indeed, he was placed in such a situation as to have hardly any property to answer the immense amount of his debts. There was one source of profit remaining, however, which greatly surpassed the worldly goods of most debtors—his literary talents. "Gentlemen," said he to his creditors, "time and I against any two. Let me take this good ally into company, and I believe I shall be able to pay you every farthing." He further proposed, in their behalf, to ensure the sum of 22,000*l*. upon his life. His proposal was accepted, and a trust deed accordingly executed. The commercial distresses of the country were at this period very great, and were threatened to be increased in Scotland by the parliamentary regulations proposed for reducing the monetary system to conformity with that of England; Sir Walter Scott stepped forward, and undertook to show the fallacy of the plan on which Ministers were proceeding. On the 22d February he published a letter in the "*Weekly Journal*" newspaper, under the signature of Malachi Malagrowth, in which he exhibited the absurdity of the parliamentary scheme in language so rich in argument, humour, and pathos, as to produce a most extraordinary sensation. Two other letters in the same strain followed; and notwithstanding an answer to them, written by Mr J. W. Croker, they had the desired effect of procuring an exemption for Scotland from the contemplated enactments. Sir Walter then sat down, at the age of fifty-five, to the task of redeeming, by the exertion of his talents as a public writer, a debt exceeding a hundred thousand pounds! He sold his furniture and house at Edinburgh, and retired to a humble lodging; and his lady being dead he reduced his establishment at Abbotsford. He was at this time employed on his "*Life of Napoleon*." In the autumn of 1826 he visited Paris with Miss Scott, his youngest daughter, in order to prosecute researches into several local and other details relating to the subject of his work. He was received in the most cordial manner by the reigning monarch Charles X. "*The Life of Napoleon Buonaparte*" appeared in the summer of 1827, in 9 vols, 8vo, and it is said to have produced him the sum of 12,000*l*.; which, with reference to the time during which he was engaged on it, appears to have amounted to about thirty-three pounds a day. Though Sir W. Scott had from the time of the publication of "*Waverley*" till the bankruptcy of Constable and Company been more than suspected of being the author of all the works popularly designated as the "*Scotch Novels*," yet the fact of their being written by him was no more than a general conjecture, peculiar precautions having been adopted

to prevent the secret from transpiring beyond a very small circle of persons, whose agency was necessary to the success of the scheme. In consequence of the event just mentioned, however, it was found impossible for the "Great Unknown," as he had been fancifully styled, any longer to remain incognito. For some time, indeed, the fact of authorship wavered doubtfully between secrecy and divulgement; but at length, on the 23d of February, 1827, at an annual dinner of the Edinburgh Theatrical Fund Association, Sir Walter Scott being present avowed himself the author of all the Scotch novels, declaring that they were wholly and solely his compositions. This statement he made in consequence of the previous promulgation of the secret by his friend lord Meadowbank in proposing his health; and he afterwards followed up the confession with a disclosure of the motives by which he had been actuated in the preface to the first series of the "Chronicles of the Canongate." About this time the copy-right of all his then published novels was sold by auction, as a part of the bankrupt stock of Messrs Constable and Company. It was bought by Mr Robert Cadell for 8400*l.*, for the purpose of republishing the works with notes and prefaces, and amended in many parts by the finishing touches of the author; and he, or rather his creditors, were to have half the profits in consideration of his literary aid. The plan succeeded, and the new edition which appeared in June 1829 soon reached an average sale of twenty-three thousand copies. In November 1828 he published the first part of a juvenile history of Scotland, under the title of "Tales of a Grandfather;" in 1829 appeared the second, and in 1830 the third and concluding portion of this interesting little work. In 1830 he also contributed a "History of Scotland," of somewhat higher pretensions, to the periodical publication called "Lardner's Cabinet Cyclopædia." In the same year appeared his "Letters on Demonology and Witchcraft," as a volume of Mr Murray's "Family Library." He had now paid, in part of his liabilities, 54,000*l.*, all except six or seven thousand pounds of which had been produced by his own literary labours. His creditors presented to him, personally, the library, manuscripts, curiosities, and plate, which had once been his own, as an acknowledgment of the sense they entertained of his honourable conduct. In November 1830 Sir Walter retired from his office as a principal clerk of the court of session, retaining, however, a large share of the salary appropriated to that office. His retirement from official duty might have been expected to relieve the pains of intense mental application; but he had tasked his strength too heavily, and it was now too late to redeem the health that had fled. During the succeeding winter symptoms occurred of gradual paralysis, a disease to which he was predisposed, as having been hereditary in his family. His contracted limb became gradually

more painful and debilitated, and his speech also was affected. During the summer of 1831 the symptoms of his disorder became gradually more alarming; and, to add to the distress of those around him, his temper, formerly so benevolent and imperturbable, became peevish and testy, insomuch that his most familiar relations could hardly venture, on some occasions, to address him. In the autumn his physicians recommended a residence in Italy, as a means of delaying the danger threatened from his illness. To this scheme, it seems, he was extremely averse, but by the persuasion of some friends he was induced to submit to it. By the kind offices of captain Basil Hall leave was obtained for him to sail in his majesty's ship the *Barham*, which was then sitting out for Malta. He accordingly sailed from Portsmouth on the 27th of October, 1831, and after a pleasant voyage, during which his health appeared to be considerably improved, he arrived at Malta. Thence, after a short residence, he proceeded to Naples, where he landed on the 27th of December. In April he proceeded to Rome, which he entered on the 21st. He inspected the remains of Roman grandeur with great interest, and visited Tivoli, Albano, and Frascati. Feeling, however, that his strength was rapidly decaying, he determined upon returning with all possible speed, wishing to die in his native country. His journey was performed too rapidly for his strength. On his arrival in London he was conveyed to an hotel in Jermyn-street, and immediately attended by Sir Henry Hallford and Dr Holland. All help was now, however, useless. At his own anxious desire he left London on the 7th of July, and proceeded by sea to Newhaven, where he landed on the evening of the 9th, and was conveyed, with all possible care, to an hotel in his native city. He was removed, on the morning of the 11th, to Abbotsford, where, after lingering for two months in a state of almost total insensibility, he died September 21, 1832, and he was interred on the 26th at Dryburgh Abbey. Sir Walter Scott left four children, two sons and two daughters. Lady Scott died May 15, 1826. It would be almost supererogatory at a period when the character of the genius of this popular and gifted writer is so widely and duly appreciated, to occupy much space in dwelling upon its leading features. In the article *Byron*, it was observed, that the two grand classes into which creative genius is divided, are the assumptive and reflective; and that lord Byron belonged to the latter, the distinguishing character of which is a mixing up of the writer's own feelings and convictions in all which he produces. The genius of Sir Walter Scott, on the contrary, was especially assumptive, or in other words, imaginative of feeling and character, with a power of altogether losing self in the delineation of the creatures represented. The only qualification of this attribute that can be much insisted upon, is comprised in the fact, that this eminent person's associations, from the nature of his

SCU

favourite studies and reading, were chiefly engrossed with scenes and persons, a dealing with which was more or less congenial with the vivid spirit of romance. The reader of the *Waverley Novels* is generally slightly lifted out of the world of mere realities into a region where the graphic, the picturesque, and a large portion of the purely imaginative predominates, and in which their author possesses the power of an enchanter. To this species of conception he united the faculties which are best calculated to render them attractive. —a most lively power of description both of character and adjunct as regarded persons; and in relation to locality and scenery, an equally expert power of describing the aspect and features by which they are rendered attractive and interesting. His representation of varied and tumultuous action is peculiarly admirable, and hence the felicity with which, both in poetry and prose, he describes battles, encounters, audiences, assemblies, and personal or intellectual conflict in strife or debate. His humour is also racy, generous, and spontaneous; and while possibly some small abatement of his existing fame may take place from imperceptible changes in the taste of the day, there can be no doubt that the nobler fictions of Sir Walter Scott will live for ever. As a poet, this permanency of admiration is not so much to be relied on, although votaries exist who profess to prefer his poetry to his prose. On these points, in an observant age, and with nothing to repel in the way of abstruseness or choice of subject, the general judgment is usually correct, which judgment awards him the bays, but assigns him no very fixed or commanding pre-eminence. Of his editorial and biographical labours the permanent rank will also be little above mediocrity; the former possess little which is essentially discriminative or distinctive; and as a biographer Sir Walter Scott was too rapid, careless, and uninvestigative to satisfy the judgment; however, his fascinating vivacity of description may interest and amuse. For the life of Napoleon Buonaparte he was perhaps also unqualified from his peculiar opinions and party predilections. With all these abatements and qualifications, however, the genius of Sir Walter Scott will ever rank high in the intellectual annals of his country; while his character as a man, setting aside a too eager desire to amass, to form the proper foundation of his beau-ideal of desirable station, —that of an influential landed gentleman, was peculiarly open, easy, and engaging. On the whole, this highly-endowed writer was an honour to the age and country which produced him, and as such will take a lasting place among those who have contributed to exalt the mental character of the era he has so much contributed to distinguish and adorn.

SCULTETUS (**ABRAHAM**) a Protestant divine, was born at Grumberg in Silesia, in 1556, and studied at Breslau. He then became chaplain to the elector palatine, pastor of a church at Heidelberg, and a member of the ecclesiastical consistory. In 1618 he was

SEG

appointed professor of divinity, in which capacity he attended the synod of Dort, and opposed the Arminians. The university of Heidelberg being ruined by the war, Scultetus removed to Embden. He wrote "*Axiomata Concionandi*;" "*Confutatio Disputationis Baronii de Baptismo Constantini*;" "*Annales Evangelii per Europam XV Seculi renovati*;" "*Medulla Patrum*;" "*Observationes in Pauli Epist. ad Tim., Tit., et Philem.*" He died in 1625.—*Gen. Biog. Dict.*

SEBA (**ALBERT**) an apothecary and naturalist of Amsterdam. He possessed an extensive and valuable museum, of which he composed a description in 4 vols, folio; one only appeared before, the other three were published after his death in 1736.—*Rees's Cyclop.*

SEDANO (**don JUAN JOSEPH LOPEZ de**) a Spanish antiquary, was born at Alcala-de-Henares, in 1729. He received his academical education at the university of Salamanca, whence he proceeded to Madrid, where he ultimately obtained the charge of the cabinet of medals in the royal library. He undertook several journeys into different parts of Spain by command of the king, with a view to the discovery and examination of ancient monuments, and a publication of the result of his researches. He died in 1801. Besides his contribution of scientific and literary papers to the academy of Madrid, he was compiler of the "*Spanish Parnassus*, or a Collection of the choicest Specimens of the most celebrated Poets of Spain," Madrid, 1768—78, 3 vols, 8vo; "*Dissertation upon the Medals and ancient Monuments found in Spain*," Madrid, 1789, 4to; "*Explanation of the Inscriptions and of the Medals found in the Towns of Catalonia, and of the Kingdom of Valencia*," Madrid, 1794, 8vo.—*Dict. Hist.*

SEDULIUS (**CÆLIUS** or **CÆCILIUS**) a priest and poet, was born in Ireland or Scotland in the fifth century, and was the author of a Latin poem called "*Carmen Paschale*," on the sacred history; it was published at Rome in 1794, 4to.—*Dict. Hist.*

SEGHERS (**GERARD**) a Flemish painter, born at Antwerp in 1589. He studied under Van Balen, and was afterwards sent very young to Rome, where he fell into the style of Manfredi, and obtained considerable reputation. On his return to Antwerp he found his countrymen so exclusively devoted to the brilliant colouring of Rubens, that he deemed it necessary to adopt a style more congenial with that of the great master of the Flemish school. He died in 1631. The principal works of this artist are, "*The Marriage of the Virgin*;" "*A Crucifixion*;" "*The Martyrdom of St Lievens*;" "*St Francis in an Extasy, supported by Angels*," at present in the Louvre. —**DANIEL SEGHERS**, brother of the preceding, a member of the order of Jesus, was allowed by the society to follow his profession as a painter. Although he painted generally, his great excellence was in flowers, his pictures of which are deemed exceedingly valuable. One of these, which is said to be his most finished

production, is a garland formed of fruits and flowers, which decorates the church of the jesuits at Antwerp. He died in 1660.—*Dict. Hist.*

SEGUR (Louis count de) a French historian and diplomatist, who was the eldest son of the marquis de Segur, mareschal de France, and was born at Paris in 1753. He had obtained distinction in arms, letters, and politics before the commencement of the French revolution. After serving during two campaigns in the war which terminated in the independence of the Anglo-Americans, he was, in 1786, appointed Minister Plenipotentiary from the court of Versailles to that of St Petersburg, and his mission was attended with complete success. In the following year he concluded a treaty of commerce between France and Russia, and prevented the renewal of a similar treaty between Russia and England, by which measure he procured for his own country those advantages which had previously been enjoyed by the English only. The count de Segur was a man of wit and gallantry, whose talents were calculated to make a favourable impression on the mind of the empress Catherine, whom he accompanied in her journey to the Crimea; and the war between the Turks and Russians having broken out, she employed him in her negotiations with the Porte. He was forming a treaty of alliance in favour of France, when the revolution in that country took place, in consequence of which he returned to Paris. In 1789 he was appointed a deputy from the nobility of Guyenne to the states general. In 1791 he was made a mareschal de camp. He was then appointed ambassador to Rome; but circumstances prevented the execution of his mission. In 1792 he was employed in an embassy from Louis XVI to the court of Berlin, when he succeeded, with some difficulty, in preventing war from taking place between France and Prussia. On the overthrow of the monarchy at home, he relinquished his connexion with affairs of state. In August 1792 he was arrested by order of the Committee of Public Safety; but being liberated not long after, he quitted France, and having lost his property, including possessions in the island of St Domingo, he supported himself for some time by writing for the press. After the fall of Robespierre he returned home, and in 1801 he was elected a member of the legislative body. He voted for bestowing on Buonaparte the consulship for life, as a measure necessary for consolidating the government of the country. In 1803 he was nominated to the council of state, and chosen a member of the National Institute; and, under the Imperial government, he was appointed to the office of grand master of the ceremonies at court, and invested with the cordon rouge. In 1813 he was made a senator, and in January, 1814, he was appointed commissioner extraordinary from the Imperial government to the eighteenth military division. On the restoration of the Bourbon family, he was created a peer of France, notwithstanding which, after the return of Buonaparte from Elba, he resumed his legislative functions,

and again became grand master of the ceremonies, and one of the peers appointed by Napoleon. On the final restoration of Louis XVIII in 1815, the count de Segur was stripped of all his dignities, and he passed the remainder of his life in literary retirement, the only public distinction which he afterwards acquired being that of a member of the French academy, into which he was admitted in consequence of a royal ordonnance, in 1816. He was for some time one of the editors of the *Journal de Paris*. In 1800 he published a "History of the Principal Events in the Reign of Frederick William the Second," which in the following year was republished under the title of a "Political Picture of Europe;" he was also the author of a tragedy entitled "Coriolanus," and several other dramatic pieces; "An Abridgement of Ancient and Modern History, for the use of Young Persons;" "The History of Modern Europe;" besides other works. His death took place at Paris, August 27, 1830.—*Month. Mag.*

SENECAI (ANTOINE BAUDERON DE) poet and miscellaneous writer, was born at Mâcon in 1643. He was the grandson of Brice Bauderon, a celebrated physician, who gave him a learned education, but he had scarcely passed the age of adolescence when he was obliged to quit France and take refuge in Savoy and Spain, in consequence of an affair of honour. After spending several years abroad he was allowed to return to his native country in 1673, and to purchase the post of first valet to Maria Theresa, queen of Louis XIV. He subsequently passed into the service of the duchess of Angoulême, in which he remained forty years, and on her death retired to Mâcon, where he died in 1737, at the advanced age of ninety-four. He was a lively agreeable writer of minor poetry, a selection from whose works, under the title of "*Œuvres Choisies de Senecai*," has been recently published in France, in the "Collection des petits Classiques Françaises" de Delangle.—*Dict. Hist.*

SERIEYS (ANTOINE) a Frenchman of literature, was born at Pont de Ceyran in 1755, and was brought up to the bar, which he forsook for a professorship of mathematics at Passy. He subsequently visited Italy, and on his return to France was employed in more than one literary institution; until he finally settled at Paris, and became an author by profession. Profiting by his extreme facility, he sent out sometimes under his own name, and not unfrequently under those of celebrated persons deceased, a great number of works, which obtained more or less temporary notice, but are otherwise deemed of little authority. The principal of these are, "*Les Décades Républicaines ou Histoire de la République Française*," 1795, 4 vols; "*Mémoires, &c. pour servir à l'Histoire Secrète de la Révolution Française*," 2 vols, 8vo, 1798; "*Dictionnaire de l'Ecriture Sainte*;" "*Anecdotes Inédites de la fin du 18me Siècle*," 1801, 8vo; "*Bibliothèque Académique*," 1810, 1811, 12 vols, 8vo; "*Delilliana; ou, Recueil d'Anecdotes concernant M. Delille*," 1813; *Lives of*

Murat, Fouché, Carnot, the late queen of Sicily, and many more, enumerated in the "Bibliographie de la France" for 1825. This ready writer, who left a great number of manuscripts behind him, died in 1819.—*Dict. Hist.*

SERVAN (JOSEPH MICHAEL ANTOINE) advocate-general of the parliament of Grenoble, was born at Romans in 1737, and brought up to the bar. He rendered himself highly popular by his eloquence and integrity as an advocate; and was the author of a great number of judicial and political works both before and after the Revolution. At the commencement of that great political convulsion, he was sent to the States-general by two bailliages; but pleaded ill health as an excuse for retirement. He also refused to become a member of the legislature under Napoleon. He died in 1807.

An edition of the best pieces of this author was published in Paris in 1825, 3 vols, 8vo; as also a selection from his unpublished works, in 2 vols, 8vo.—JOSEPH SERVAN, brother of the preceding, was born in 1741, and embraced the military profession. He served with distinction both before and after the Revolution, and in 1792 was for a short time minister of war. He died in 1808, a commandant of the legion of honour. General Servan was author of "Soldat Citoyen," 1780, 1 vol, 8vo; "Projet de Constitution pour l'Armée Française," 1790, 8vo; "Histoire des Guerres des Gaulois et des François en Italie depuis Bellosesus jusqu'à la Mort de Louis XII," 1805, 8 vols, 8vo.—*Ibid.*

SEUME (JOHN THEOPHILUS) a German writer, born in 1763 at Pösern near Leipsic, and was educated at the university of the latter town, where he dedicated himself principally to the Greek and Latin languages and the mathematics. He was about to proceed to France, to enter the school of artillery at Metz, when he was induced by the landgrave of Hesse to accompany the subsidiary body of Hessians taken into the service of England to oppose the American Colonists. He subsequently entered into the service of Russia, from which he was dismissed by the emperor Paul. In 1801 he traversed a great part of Italy, Sicily, and Switzerland on foot. In 1803 he once more visited Russia. He died at the baths of Toplitz in 1810. His works have been published in 5 vols, by I. H. Zimmerman. The principal are, "Details relative to the Events in Poland in 1794;" "An Essay on the Life and Character of Catherine II;" "Changes in Russia since the Accession of Paul I;" "Walk to Syracuse;" and "My Summer in the North." The two last works contain some interesting particulars of the personal history and habits of the author.—*Ibid.*

SEYER (SAMUEL) a native of Bristol, who received his education at Corpus Christi College, Oxford, where he took the degree of M.A. in 1781. On leaving the university, he succeeded his father as master of a grammar school in the city of Bristol, in which situation he continued till 1810. Though in holy orders, he held no preferment in the church till 1803,

APP. BIOG. DICT.

when he was presented to the perpetual curacy of Horsfield, near Bristol, and he subsequently obtained the neighbouring rectory of Felton, which he held till his death in 1831. His publications consist of "A Treatise on the Syntax of the Latin Verb," 1798, 8vo; "Principles of Christianity," 1800, 12mo; "Latium Redivivum, or a Treatise on the modern use of the Latin Language, and the prevalence of the French," 1803, 8vo; "The Charters and Letters Patent granted by the kings and queens of England to the town and city of Bristol, translated from the Latin," 1812, 4to; and "Memoirs, Historical and Topographical, of Bristol and its neighbourhood, from the Earliest Period to the Present Time," 4 parts, 4to. He was one of the original members of the Bristol Literary Society, in which he for many years held the office of vice-president.—*Ann. Biog.*

SHARP (SAMUEL) a surgeon and pupil of Cheselden, was surgeon of Guy's hospital, and member of the Royal Society. His health becoming delicate he went to Italy, and published an account of his travels, which involved him in a dispute with Baretti. He also wrote "A Critical Enquiry into the present State of Surgery;" and "A Treatise on the Operations of Surgery." Mr. Sharp died in 1778.—*Gen. Biog. Dict.*

SHELDON (GILBERT) archbishop of Canterbury, was born at Stanton in Staffordshire, in 1598. He was educated at Oxford, and entering into orders became chaplain to lord-keeper Coventry, who gave him a prebend in Gloucester cathedral, and obtained for him the living of Hackney. At the same time Charles I made him clerk of the closet. He took his doctor's degree, and in 1635 became warden of All Souls. During the rebellion he continued faithful to the king. At the Restoration he was made bishop of London, and master of the Savoy; and on the death of archbishop Juxon he succeeded him in the see of Canterbury. He was chancellor of Oxford, and built a theatre, which is called after him. He was very liberal in his charities. He died at Lambeth in 1677, and was buried at Croydon. While master of the Savoy, Dr Sheldon greatly distinguished himself in the conference between the episcopal divines and the nonconformists.—*Biog. Brit.*

SHELLEY (PERCY BYSSHE) a modern poet of considerable power, and very peculiar temperament and character. He was the eldest son of Sir Timothy Shelley, bart, of Castle Goring in Sussex; and was born at Field-place in that county, on the 4th of August, 1792. After receiving the usual course of previous instruction, he was sent to Eton, whence he was earlier than usual removed to the university of Oxford. This removal was owing to a rigid unconventional tenacity of character, in relation to what he deemed the reason and justice of things, which is always inconvenient to established authority, and possibly incompatible with the submission to it which is deemed indispensable in public education. At Oxford a similar spirit suited still

T

less with the genius of the place; and the result of much pertinacious but conscientious eccentricity, was expulsion. Family dissatisfaction was in the usual nature of things consequent upon this manifestation of a bent of disposition and waywardness of genius so uncompromising; and in addition to academical discountenance, the youthful student had to sustain that of his dearest connexions. The latitudinarianism and carelessness of all established opinions, which led to this estrangement, will be regarded with more or less severity according to the temper of the individual sitting in judgment; but the great sacrifices in a worldly sense, made by Mr Shelley, exhibit him as a martyr, at least, to his own notions of right and wrong. His family was further estranged by an ill-assorted marriage with an individual neither adapted to his condition in life, nor to an exposure to principles of action, which if even pregnant with danger when of self-origination, are doubly so when communicated to minds altogether unfit for their reception. The result was very unfortunate, for after the birth of two children, a separation took place by mutual consent; and the untimely death of the lady soon after, exposed him to much obloquy and unjustifiable misrepresentation. On the decease of his first wife, he married Miss Godwin, daughter of the celebrated author of "Political Justice," by the equally celebrated Mary Wolstonecroft, and soon after retired to Marlow in Buckinghamshire, where he wrote his "Revolt of Islam." About this time application was made by his family to deprive him of the guardianship of his two children, a boy and a girl, on the ground of alleged atheistical and sceptical notions, and of certain avowed opinions regarding the intercourse of the sexes, which were deemed immoral and dangerous. The application succeeded, and principally on the asserted evil tendency of a juvenile production, called "Queen Mab," written while at Oxford, and published from a copy surreptitiously obtained, without the consent of the author. This event caused him much grief and uneasiness, and possibly induced him to quit England, and repair with his second wife and a new family to Italy, where he renewed an acquaintance with lord Byron, to whom he had become known during a former visit to the continent. With that nobleman and Mr Leigh Hunt, who had also become a resident in Italy, Mr Shelley joined in a periodical miscellany, published in London, entitled "The Liberal." This publication, which contained the celebrated "Vision of Judgment," by lord Byron, and other original productions, only extended to four numbers, in consequence of a change of mind in the noble poet, and of other disadvantages, one of which was the untimely death of Mr Shelley, who was drowned in his return from Leghorn to his house on the gulf of Lerici, in the bay of Spezia, by the wreck of his own small sailing boat, in a sudden and violent storm. His companion, Mr Williams, an officer of the 8th dragoons,

and a single seaman, fell victims to the same catastrophe, which occurred on the 8th of July, 1822. A few days afterwards the bodies were washed on shore near Via Reggio, and being recognized, were buried by the Italian authorities; but were subsequently disinterred, and reduced to ashes by the instrumentality of friendship, with a view of depositing the urns containing them agreeably to the wishes of their respective connexions. In conformity with those of the friends of Mr Shelley, his remains were deposited in the Protestant burial-ground at Rome, near the grave of a child whom he had lost in that capital. At the time of his decease Mr Shelley had nearly completed his thirtieth year. The principal works of this singular but highly gifted man of genius, consist of "The Revolt of Islam;" "Alastor;" "Prometheus Unbound;" the tragedy of "The Cenci;" and a posthumous volume of poems, which have excited considerable attention. Death having abated many prejudices, which, however they might qualify opinion in regard to the philosopher, were very unfairly employed against the poet, a high and honourable rank seems likely to be ultimately assigned to him. He is, however, too abstract and refined, both as to sense and expression, to be popular; but to borrow a brief passage from a surviving friend and admirer: "In all his writings there is a wonderfully sustained sensibility, and a language lofty and fit for it. He has the art of using the stateliest words and the most learned idioms without incurring the charge of pedantry, so that passages of more splendid and sonorous writing are not to be selected from any writer since the days of Milton; and yet when he descends to us from his ideal worlds and comes home to us in our humbler bowers, and in yearnings after love and affection, he attunes the most natural feelings to a style so proportionate, and withal to a modulation so truly musical, that there is nothing to surpass it in the lyrics of Beaumont and Fletcher." Upon the tendency of the speculative opinions of Mr Shelley, it is scarcely necessary to say any thing more, than that as regards certain presumed modifications and reforms of the spirit of society, like most men of extreme sensibility and refined and peculiar genius, he legislates for imaginary rather than actual states of being; for a world created by his own habits, associations, and feelings, a world within rather than without him. In this order of intellect there is often a simplicity as remarkable as its views and speculations are remote and peculiar; and the task of assumed rectification is commenced with a degree of unsuspecting confidence, in direct proportion to the certainty of being opposed by the settled convictions of nearly all the rest of mankind. Mr Shelley seems to have set out in life with this singleness of notion and of purpose, and exhibited both the weakness and the strength of the character. The weakness, as just described; and the strength, in the soul and the resolve which cannot be moved out of its purposed path by

merely selfish and worldly considerations. In a word, while little can be said for the philosophic soundness of his theory, and still less for the prudence and expediency of its personal reduction to practice, on his own part, the extreme disinterestedness, generosity, and humanity of his character, were too unequivocally proved by great sacrifices not to afford him an undeniable claim to the merit of conscious rectitude and benevolent intention.—*Hunt's Lord Byron and his Contemporaries. Preface to Posthumous Poems.*

SHEPPARD (WILLIAM) a lawyer, was a native of Whitminster in Gloucestershire. In 1656 he was made a sergeant at law by Cromwell, who appointed him to be a Welsh judge. He wrote "The Touchstone of Common Assurances;" "Law of Common Assurances;" "The Parson's Guide, or Law of Tythes;" "Survey of the County Judicatures;" "Office of the Clerk of the Market;" "Guide to Justices of the Peace;" "On Corporations, Fraternities, and Guilds;" "Actions on the Case for Slander;" "Proposals towards a Regulation of the Law;" "The Faithful Counsellor," 2 vols.; "Epitome of the Common and Statute Laws." He died in 1674.—*Wood.*

SHIELD (WILLIAM) one of the most celebrated of English musical composers of the present age, was born at Swallow, in the county of Durham, in 1754. His father, an eminent singing master, removed to South Shields soon after his birth; and the son was taught to modulate his voice and practise the violin, when he was only six years old; and within a year and a half he had made so extraordinary a progress as to be able to perform Corelli's fifth work. This was the more remarkable, as much of his time had been occupied by the harpsichord. In his ninth year he lost his parent and tutor, who left a widow with four children. He was desirous of making music his profession, but his inclination was checked by the ridicule with which the calling of a fiddler was constantly treated in a seaport town. He had the choice given him of becoming a sailor, a boatbuilder, or a barber. He decided in favour of boatbuilding, and was bound apprentice to Edward Davison, then residing in the neighbourhood of South Shields. He was kept rather close to his employment, yet his master occasionally indulged him in the exercise of his favourite pursuit, from which, in the third year of his apprenticeship, he sometimes obtained slight pecuniary advantage. He led the Newcastle subscription concerts, where he repeatedly played the solo parts of Geminiani's and Giardini's concertos; and having produced an admired specimen of sacred music, when the new church was to be consecrated at Sunderland, he was requested to compose the anthem for that occasion. Soon after the expiration of his apprenticeship, he resolved to relinquish boat-building, and to adopt the profession of music. From the celebrated theorist, Avison, of Newcastle-upon-Tyne, he received lessons in thorough bass; and having grounded himself in the

principles, as well as practice of his art, he went upon a musical expedition to Scarborough, whither he was invited by his intimate friend John Cunningham, the pastoral poet, several of whose songs he had set to music at South Shields. At Scarborough his talents attracted much notice; he acquired the situation of leader of the theatrical band, and of the principal concerts, and he obtained the intimacy and friendship of many respectable individuals. Soon after the death of Mr. Avison, the son of that gentleman engaged him as leader at the Durham theatre, and at the Newcastle concerts. Returning next season to Scarborough, he was solicited by Fischer and Borghi to accept a vacant seat in the orchestra of the Italian opera house. The offer was accepted, and Giardini placed him in the rank of the second violins. In the following season, Cramer removed him to the principal viola; at which post he remained eighteen years; and in that time he produced upwards of twenty operas for the Haymarket theatre, and that of Covent-garden. Mr. Shield, on account of the ill health of Mr. Bulkeley was one season, leader of the band at the Haymarket; and at that time the Rev. Mr. Bate, (afterwards the Rev. Sir Henry Bate Dudley,) wrote the afterpiece of the "Flitch of Bacon," for the music of which he applied to Mr. Shield. Dr. Arnold being the regular composer for the theatre, Shield's delicacy induced him to hesitate; but, as Mr. Bate threatened to withdraw the piece unless it were produced with Shield's music, he at length complied. His success was great and decisive. His time was now much occupied in assisting at the great concerts; such as Bach's, Abel's, and La Motte's, for which first rate performers only were qualified; when Mr. Harris, manager of Covent-garden theatre offered to engage him, as regulator of the band and composer to the house. This appointment he accepted, and filled with much success until a difference between him and Mr. Harris, on a pecuniary point, induced him to resign. He was also appointed one of the musicians in ordinary to the king; he was engaged in the Ladies' Friday concerts, the grand Sunday concerts, and the Wednesday concerts of ancient music. From the last of these he withdrew, as the necessary attendance at the Mondays' rehearsals interfered with his theatrical duty. Lord Sandwich however, who was the influential friend of Mr. Harris and Josh Bates, commanded his return to a task which he always performed with pleasure, and at last relinquished with regret. About this time Mr. Shield accidentally travelled from London to Taplow with the celebrated Haydn; and he considered himself to have gained more important information by four days' association with that great founder of a style which has given fame to numerous imitators, than ever he acquired by the best directed studies in any four years in any portion of his life. In the month of August 1792, after the relinquishment of his engagement at Covent-garden theatre, he

resolved to employ his leisure in visiting Italy. He accordingly quitted England in company with the ingenious but eccentric Joseph Ritson, with whom he proceeded to Paris, and thence through Lyons, Piacenza, Parma, Modena, Bologna, Florence, and Sienna, to Rome. There Mr Shield was noticed by Sir William Hamilton and by Prince Augustus, and he also contracted an intimate friendship with More, the landscape painter. After receiving lessons every day for two months, and obtaining much particular as well as general instruction, he returned to England. On his arrival he renewed his engagement at Covent-garden theatre. However, another misunderstanding took place between him and the manager, and he again resigned. At the death of Sir William Parsons he was appointed master of his majesty's musicians in ordinary. Mr Shield, as a composer, was pure, chaste, and original. His prominent characteristic was simplicity. Perhaps no composer ever wrote so few notes into melodies so sweet and impressive; while the construction of the bass and harmony is at once graceful, easy, and unaffected. In "Rosina," and "Marian," &c. his airs breathe all the freshness and purity, and beauty of rural life; though the more ornamented and difficult parts are carried far beyond the common style of bravura. His songs are strictly national. After Purcell, Shield constitutes the finest example of a genuine English composer. It was to his compositions that the late Charles Bannister, Charles Ingleton, John Johnstone, and Mrs Billington, were chiefly indebted for their celebrity as English ballad singers. Of his dramatic pieces the following are among those which have been most generally admired. "The Flitch of Bacon;" "Rosina;" "The Poor Soldier;" "Robin Hood;" "Fontainebleau;" "The Noble Peasant;" "The Woodman;" "Marian;" "The Enchanted Castle;" "Oscar and Malvina;" and "Hartford Bridge." Mr Shield also published "An Introduction to Harmony;" produced various compositions for instruments; and set to music a number of beautiful songs, as "The Heaving of the Lead;" "The Post Captain;" "Old Towler;" "The Thorn;" "I've traversed Judah's barren sand;" "The Battle Song;" and "Poor Tom Moody." He died January 25, 1828, at his house in Berners-street, London; and his remains were interred in Westminster Abbey.—*Biog. Dict. of Mus. Month. Mag.*

SHUCKFORD (SAMUEL), a clergyman, was educated at Caius college, Cambridge. He was prebendary of Canterbury, and rector of Allhallows, Lombard-street. He wrote two works, on "The Creation and Fall of Man;" and "The History of the World, Sacred and Profane." Dr Shuckford died in 1754.—*Gen. Biog. Dict.*

SIBBES (RICHARD) a puritan, a native of Sudbury in Suffolk, was born in 1577, and became fellow of St John's college, Cambridge. He attained such popularity as a preacher that he was invited by the society of Gray's-inn to

be their lecturer. He was offered the provostship of Trinity college, Dublin; and in 1625 he became master of Catherine hall. Dr Sibbes died in 1635. His works are printed in 3 vols, 8vo.—*Clark's Lives.*

SIDDONS (SARAH) a celebrated actress, especially distinguished for her talents as a tragedian. This highly gifted personage was the eldest daughter of Roger Kemble, the manager of an itinerant company of comedians; and she was born at Brecknock, in South Wales, July 14, 1755. She was highly indebted to nature, both for the personal endowments of beauty of form and melody of voice, and for the loftier faculties of the mind. At the early age of fifteen she conceived an attachment for Mr Siddons, an actor belonging to her father's company, which her parents, probably considering as the mere impulse of childish feeling, endeavoured to suppress by removing her from home, and she was accordingly placed as lady's maid in the family of Mrs Greathead of Guy's Cliff, near Warwick, with whom she resided nearly two years. Her attachment, however, remained unabated, and in her eighteenth year she was united to her lover, as it appears in defiance of parental disapprobation. Soon after her marriage both she and her husband were engaged to perform at Liverpool, Manchester, Birmingham, and other places. At Cheltenham she attracted the notice of lord Bruce, afterwards earl of Aylesbury, who recommended her to Mr Garrick, and she was soon afterwards engaged at Drury-lane. Mrs Siddons made her first appearance before a London audience on the 29th of December, 1775, in the character of Portia in the "Merchant of Venice." The impression she made on the public was by no means remarkable; during the remainder of the season she was chiefly confined to subordinate and insignificant characters, and she therefore did not renew her engagement; but in the summer of 1776 she appeared at Birmingham, where she played with Henderson, and in consequence of the opinion which he formed of her talents, she was subsequently engaged at Bath, where she rapidly acquired great professional reputation. At this period she appeared in a variety of characters, but those in which she was supposed to excel were Euphrasia, Alicia, Rosalind, Matilda, and lady Townley. At length her provincial fame procured her a new invitation to the metropolis, and she made her second appearance at Drury-lane October 10, 1782, in the character of Isabella in the "Fatal Marriage," when her success was decisive, the theatre overflowed every night, she became a favourite of the public, and was hailed by general consent as the queen of tragedy. The same season she exhibited in Jane Shore, Euphrasia, Calista, Belvidera, and Zara, in Congreve's "Mourning Bride." In the summer of 1783 she performed at Dublin, and afterwards at Cork, with great success. After her return to England, towards the end of October 1783, she had an interview with the

SID

celebrated Dr Johnson, who on that occasion paid her an extraordinary but very appropriate compliment. When she entered the room it happened that there were not chairs enough to accommodate the company present, when the doctor said to her—"You see how it is, madam, where you appear there is not a spare seat to be found." He inquired of her which of Shakspeare's characters she considered the best drawn, and upon her answering that she thought the character of Queen Catherine, in Henry the Eighth, the most natural, he said—"I think so too, Madam, and whenever you perform it I will once more hobble out to the theatre to see you." She did not, however, appear in that character till some time after Johnson's death. The first of Shakspeare's plays in which she acted was "Measure for Measure," in the character of Isabella, in November 1783. She afterwards appeared in the parts of Constance, Volumnia, and to crown all, in Lady Macbeth. In 1784 Sir Joshua Reynolds painted her portrait in the character of the Tragic Muse, and it is said this was the only occasion on which that celebrated artist marked his name on his works. When Mrs Siddons first saw the picture in its finished state, she observed what at first appeared to be embroidery of a classical pattern on the border of the robe, but on closely examining it, it appeared to be the name of the artist, and on her mentioning it to him he gallantly replied—"I could not omit the opportunity which the circumstance afforded me of transmitting my name to posterity on the hem of your garment." During the summer recess she went to Scotland, and also revisited Ireland. At Edinburgh she received a thousand guineas for performing ten nights; and among numerous presents bestowed on her was a magnificent silver urn, with the inscription "A Reward to Merit." In 1787 her brother, John Kemble, became acting manager of Drury-lane theatre, and in the spring of 1788 she appeared for his benefit as Katherine in "Katherine and Petruchio." In her thirty-fifth year (1790) she played Juliet; and April 21, 1794, at the opening of the theatre of new Drury, she performed Lady Macbeth, to her brother's Macbeth. In 1801, John Kemble having acquired a share in Covent-garden theatre, she transferred her talents to that establishment, where she continued to delight the public till the destruction of the theatre by fire, in September 1808; though for a part of the intermediate period the splendour of the unrivalled display of her abilities had been somewhat obscured by the false glare of Master Betty's histrionic exhibitions. But this popular delusion at length subsided, and in the winter of 1806—7, Mrs Siddons resumed her ascendancy. The new theatre of Covent-garden was opened September 18, 1809, within a year of the destruction of the former, with the tragedy of Macbeth, in which she appeared; but the whole performance passed in dumb show, in consequence of the riots which then commenced, owing to

SIM

disputes about the prices of admission; and it was not till April 24, 1810, when tranquillity was restored, that she again made her appearance. In the following season, which was the last but one of her performance, she went through nearly the whole range of her characters, and never did she display greater dignity and intellectual powers. In 1812, on the 29th of June, she retired from the stage, after playing the part of Lady Macbeth, her performance of which will ever live in the memory of those who witnessed it; and on that occasion she recited an appropriate address, which had been written by her nephew, Mr Horace Twiss. Thus terminated her theatrical engagements, since she never afterwards appeared, except on two or three particular occasions, between the years 1812 and 1817. She also, after her retirement from the stage, gave a course of public readings from Shakspeare, at the Argyll Rooms; and she likewise gave public readings of Milton, from Paradise Lost. She died at her house in Upper Baker-street, London, June 8, 1831; and her remains were interred in a vault in Paddington church. She lost her husband by death, in 1808; and of the five children she had by him two only survived her. Mrs Siddons published "An Abridgment of Paradise Lost," 1822, 8vo, which she had drawn up for the use of her children.—*Life by Boaden. Month. Mag. Ann. Biog.*

SIGNORELLI (LUCA) a painter, was born at Cortona in 1439. He was one of the first anatomical designers of the naked figure. His best picture, the "Last Judgment," at Orvieto, was imitated by Michael Angelo. Signorelli died in 1521.—*Pitkington.*

SIMON (EDWARD THOMAS) a French physician and man of literature, was born at Troyes in 1740, and brought up to the medical profession. He repaired to Paris in 1786, and in 1790 was nominated secretary of the Council of Health, and afterwards of Mendicity and Public Charity. On the adoption of the constitution of the year III, he formed the plan of a library for the Council of Ancients and the Council of Five Hundred, and was appointed keeper of the same. He was afterwards employed in public instruction at Nanci and Besançon. He died in 1818. He was the author of several poems on subjects of temporary popularity, and was concerned in some able translations and useful collections.—*Dict. Hist.*

SIMS (Dr JAMES) an eminent physician, and writer on medicine and botany. His father was a resident physician sixty years at Dunmow, in Essex, but the son was born at Canterbury, and received his education at a school at Burford in Oxfordshire. At the age of twenty-one he went to study medicine at Edinburgh, and afterwards removed to Leyden, where he took the degree of MD. in 1764, on which occasion he published a thesis "De Temperie Fœminæ, et Morbis inde oriundis." He settled in London, and became physician to the Surrey Dispensary, and also to the charity for lying-in women,

SMI

devoting much of his attention to midwifery, in which branch of practice he acquired great reputation. At the first announcement of the discovery of vaccination he expressed his doubts of its efficacy, but future inquiries and observations induced him to change his opinion, and strongly to advocate its utility. Dr Sims published "Observations on Epidemic Disorders," 1773, 8vo; "A Discourse on the best Method of prosecuting Medical Inquiries," 1744, 8vo, both which were translated into German. In 1781 he edited Dr Edward Foster's "Principles and Practice of Midwifery," and he contributed various papers to the "Memoirs of the Medical Society of London," and other collections; besides which he was the editor of the "Botanical Magazine" from the fourteenth to the forty-second volume of that work. Dr Sims was an active member of the Linnæan Society, to whose transactions he was likewise a contributor. His death took place at Dorking, in Surrey, February 26, 1831.—*Orig.*

SINGER (ГЕОМОН JOHN) an ingenious writer and lecturer on natural philosophy in the metropolis, who died in 1817. He was the author of "Elements of Electricity and Electro-Chemistry," 1814, 8vo, a work which exhibits an admirable display of the state of chemistry, and the sciences connected with it at the period of its publication.—*Ibid.*

SMITH (ГЕОМОН) an ingenious poet and landscape painter, who was born in 1714. He resided at Chichester in Sussex, where he was engaged in painting as a profession, and he had two brothers living at that city, who possessed similar talents. He was the author of "Six Pastorals," published in 1770, which procured for him considerable reputation as a descriptive poet. His death took place in 1776.—*Ibid.*

SMITH (JOHN) an eminent physician, who was a native of Buckinghamshire, where he was born in the early part of the seventeenth century. He studied at Brasenose college, Oxford, and took the degree of MD., after which he became a fellow of the College of Physicians, and one of the first members of the Royal Society. He was the author of a curious work, entitled "King Solomon's Portraiture of Old Age, being a Paraphrase on Ecclesiasticus, chap. xii. v. 1—6." Lond. 1676, 8vo. This is a philosophical discourse, giving an account of the mental and bodily infirmities incident to protracted existence. He was also a contributor to the Philosophical Transactions.—*Wood's Athen. Oxon. Collier's Hist. Dict.*

SMITH (Sir JOHN) son of Sir Clement Smith, of Little Baddow in Essex, was educated at Oxford, and distinguished himself as a statesman and a soldier. In 1576 he was sent by queen Elizabeth to the king of Spain to intercede in behalf of the states of the Netherlands, and he acquitted himself so much to the satisfaction of his mistress as to receive the honour of knighthood. He died about 1600. His works are, "A Discourse on the Form and Effects of Divers Weapons and other Matters Military," 4to; "Instruc-

SPE

tions, Observations, and Orders Military," 4to.—*Lloyd's State Worthies.*

SMITH (Sir JAMES EDWARD) a distinguished English physician and naturalist, who was born at Norwich, December 2, 1759. After some preliminary education he went to Edinburgh in 1780, and during the prosecution of his medical studies at that university he paid particular attention to botany, and gained the gold medal given to the best proficient among the students of that science. He then went to London, where he became acquainted with Sir Joseph Banks, and in 1784 he purchased the Linnæan collection, containing the epistolary correspondence and other papers, specimens of natural history, &c. of the elder and younger Linné. In 1786 he took the degree of MD. at Leyden; and in that and the following year he visited France and Italy. On his return to England he published "A Sketch of a Tour on the Continent," 1793, 3 vols, 8vo, containing much interesting information relative to natural history. Soon after he engaged with Dr Goodenough, bishop of Carlisle, and others, in the foundation of the Linnæan Society, of which he was president till the time of his death. In 1797 he retired to his native city, and engaged in medical practice; and in 1814 he received the honour of knighthood from his late majesty, who then accepted the office of patron of the Linnæan Society. He continued to reside at Norwich during the remainder of his life, making annual visits to London to deliver lectures at the Royal Institution. His death took place at Norwich, March 17, 1828. His principal works are, "English Botany," 36 vols, 8vo; "Natural History of the Lepidopterous Insects of Georgia," 1797, 2 vols, folio; "Flora Britannica," 1803-4, 3 vols, 8vo; the "English Flora," 4 vols, 8vo; and "An Introduction to Botany," 8vo; besides the Travels, already mentioned.—*Month. Mag. London's Mag. of Nat. Hist.*

SNAPE (ANDREW) serjeant farrier to Charles II, wrote a work on "The Anatomy of the Horse," folio.—His son, ANDREW SNAPE, was born at Hampton-court, and educated at Eton, whence he was elected to King's college, Cambridge. He became doctor in divinity, and canon of Windsor; but in 1717 he gave such offence by his answer to Hoadly, that he was dismissed from his situation of king's chaplain. Two years afterwards he was provost of King's college; he also held the living of Ildesley in Berkshire. He died in 1742. His sermons were published in 3 vols, 8vo.—*Gen. Biog. Dict.*

SOUFFLOT (JAMES GERMAIN) an architect, was born at Franci in 1713, and studied at Rome. He built an hospital and exchange at Lyons, which were so much admired that he was made superintendent of the royal buildings at Paris; in this situation he built the church of St Geneviève. He was also a knight of the order of St Michael. He died in 1780.—*Dict. Hist.*

SPENCE (ELIZABETH) a novelist and miscellaneous writer, who was the daughter

S P I

of a physician at Durham, where she was born in 1768. On the death of her parents she removed to London, to reside with some relatives; and being deprived of their protection also, after a few years, she employed herself in writing for the press, with the view of making some addition to her scanty income. Among the productions of her pen may be mentioned "Helen Sinclair," 1799, 2 vols, 12mo; "The Wedding Day," 3 vols, 12mo; "The Curate and his Daughter," 3 vols, 12mo; "The Traveller's Tale," 3 vols, 12mo; "Letters from the North Highlands," 8vo; "Sketches of the Manners, Customs, and Scenery of Scotland," 2 vols, 12mo; "Tales of Welsh Society and Scenery," 2 vols, 12mo; "Old Stories," 2 vols, 12mo; "Summer Excursions through England and Wales," 2 vols, 12mo; "Nobility of the Heart," 3 vols, 12mo; "How to be rid of a Wife," and "Dame Rebecca Berry," 3 vols, 12mo. These works are generally creditable to the abilities of the authoress, and are adapted to promote the interests of religion and virtue. Her "Letters from the Highlands," and the tale of old times entitled "Dame Rebecca Berry," have been regarded as the best of her productions. Miss Spence resided in the metropolis till the spring of 1832, when an attack of paralysis and general debility induced her to remove to Chelsea for change of air; and her death took place July 27, 1832. She was highly respected, and numbered among her intimate acquaintance several persons distinguished for their rank or talents.—*Biog. Dict. of Living Authors. Ann. Biog.*

SPIX (Dr JOHANN VON) an eminent German naturalist and traveller, who was born in 1781 at Hockstadt, where his father was a surgeon and town councillor. He was educated at Bamberg, and in the prince bishop's clerical seminary at Würzburg, on quitting which he became a private tutor; but having obtained the degree of doctor in medicine and surgery, he engaged in medical practice at Bamberg with great success. He was now appointed adjunct of the Royal Bavarian Academy of Sciences at Munich; and at the expense of the government he travelled in France and Italy. On his return from this tour he was made conservator of the Zoological Museum at Munich, and a member of the Royal Academy. In 1817 he was sent, together with his friend Dr Martins, to Brazil, in the suite of the Austrian Princess Leopoldina, to make scientific researches in that country; and they returned in December 1821 with a valuable collection of zoological and mineralogical curiosities. Dr Von Spix, as the reward of his services, was invested with the Bavarian Order of Merit, and a pension of 3000 florins a year. His death took place May 13, 1826. Besides other works he published "A Dissertation on Natural History," 1811; "A Dissertation on the Apes of the Old and the New World," 1812; "Travels in Brasil in 1817—1820," in conjunction with Charles Philip Frederic von Martins, vol. i. 1823; "Serpentum Brasiliensium Species novas,"

S T E

1824; and "Simiarum et Vespertilionum Brasil. Species novas," 1824.—*New Ger. Nec.*

STAUNFORD (Sir WILLIAM) an English judge, was born at Hadley in Middlesex in 1509, and studied at Oxford and at Gray's-inn. He became successively attorney-general, queen's sergeant, and judge of the common pleas. He published "An Exposition of the King's Prerogative;" "Placita Coronæ." He died in 1558.—*Wood.*

STEBBING (HENRY) a clergyman, was educated at Cambridge. As a recompense for the part which he took in the Bangorian controversy, bishop Sherlock made him chancellor of Salisbury. He preached the Boyle's lecture, and published controversial pieces in one folio volume, and two volumes of practical sermons. He died in 1763.—*Gent. Mag.*

STEPHEN (JAMES) an eminent lawyer and political writer, who was descended from a respectable family in the county of Aberdeen, N. B., but was a native of Poole in Dorsetshire. He received his education at Winchester; and having lost his father, who was a barrister, he found the profession of the law, which he had also adopted, an inadequate means of support. He therefore became editor and parliamentary reporter for the "Morning Chronicle" newspaper, till at length he obtained an appointment in the prize court at the island of St Christopher's, in the West Indies. During his residence there he realized a handsome fortune, and on his return to England he formed a matrimonial alliance with the family of Mr Wilberforce. While abroad he acquired an intimate knowledge of colonial law, and he appears to have imbibed with it an horror of the general system of local government in the colonies which led him to become one of its most distinguished opponents. He now obtained a large and lucrative share of practice as an advocate in prize causes before the privy council. The violation of neutrality by the masters of American vessels subjected them to frequent capture, and subsequent condemnation; and Mr Stephen having his attention particularly directed to this circumstance, he published his sentiments in an anonymous pamphlet entitled "War in Disguise, or the Frauds of Neutral Flags." The talents and views displayed by the writer attracted the attention of government, and he was introduced into parliament as representative of the Irish borough of Tralee. He suggested and arranged the whole system of the continental blockade, which for many years occasioned the greatest embarrassment to Buonaparte; and Mr. Stephen took every occasion to advocate that system in parliament, and to defend it against all opposition. His conduct in this affair appears to have been extremely disinterested, as the plan he recommended annihilated the whole of that prize appeal business from which his professional emoluments were derived. The ministry, however, did not overlook the self-devotion of their adherent, who was appointed by Mr Percival to the lucrative office

of a master in chancery, which it appears that he preferred to a pious judgeship, or the honourable but uncertain post of attorney general. The repeal of the Orders of Council, in 1812, and the manner in which that measure was conducted, induced Mr Stephen to withdraw his attention in some degree from the proceedings of government; and he finally retired from parliament in 1815, having till then had a seat for the borough of East Grinstead. He likewise resigned the situation of Master in Chancery, after he had retained it twenty years. As a senator and a public writer he distinguished himself by his constant opposition to negro slavery, and he was therefore regarded by the West India planters as one of their most formidable antagonists. He died at Bath, October 10, 1832, at the age of seventy-three. He published a tract entitled "The Dangers of the Country," 1807, 8vo; and "The History of Toussaint L'Ouverture, with a Preface," 1814, 8vo; besides speeches in parliament, and other pieces; and he is said to have been one of the projectors of the "Christian Observer," and of the "British Review."—*Biog. Dict. of Living Authors. Gent. Mag.*

STEPHENS (JOHN) an English captain in the army of James II when he made his last attempt in Ireland. He afterwards employed himself in writing for the London booksellers, and published a translation of Mariana's "History of Spain," folio; a continuation of Dugdale's "Monasticon," folio; a "Spanish and English Dictionary," folio; and a "History of Taxes," 8vo. He died in 1726.

STERNE (RICHARD) a learned prelate, was born at Mansfield in Nottinghamshire, in 1596. After taking his degrees in arts at Trinity college, Cambridge, he became fellow of Bene't college, and in 1633 was made master of Jesus college. He was chaplain to archbishop Laud, and attended him on the scaffold. At the Revolution he experienced great misfortunes, but at the Restoration he was made bishop of Carlisle, and afterwards archbishop of York. He published a "Treatise on Logic;" he had also a share in the Polyglott, and in the revisal of the Common Prayer Book. Archbishop Sterne died in 1683.—*Le Neve's Lives of the Bishops.*

STEVENS (ALEXANDER) an eminent English architect, who is stated to have erected, during the forty years preceding his death, more stone bridges and other buildings in water than any other person in the kingdom. Among his works are the bridge over the Liffey, in Dublin; the locks and docks on the grand canal, passing through Dublin, Kildare, and King's County, in Ireland; and the aqueduct over the Lune, at Lancaster, which exhibit ample proofs of his professional talents. His death took place at an advanced age in January 1796.—*Orig.*

STEVENSON (WILLIAM) an ingenious writer and man of science, who was born about 1772. He held a situation in the Record Office in the Treasury at the time of his death, which took place March 22, 1829.

His literary productions include an "Historical Sketch of the Progress of Discovery, Navigation, and Commerce," 1824, containing, with much other valuable information, an arranged catalogue of books of voyages and travels; a "General View of the Agriculture of the County of Surrey," 8vo; the article on "Chivalry" in the Edinburgh Encyclopædia, and the "Life of Caxton," published by the Society for the Diffusion of Knowledge. During the latter part of his life he was occupied, under the auspices of that Society, in preparing for the press a series of treatises designed for the edification and improvement of the agricultural classes.—*Month. Mag.*

STEVENSON (SIR JOHN ANDREW) an eminent musical composer, who was a native of Ireland. He received his earliest musical instruction in the cathedral church of St Patrick, Dublin; and in that situation he acquired the taste for both secular and sacred music, which enabled him to distinguish himself. He discovered an early genius for composition, and while a boy assisted Mr O'Keeffe. When the farces of that dramatist called "The Son-in-Law," and "The Agreeable Surprise" were first brought out at Dublin, the original music belonging to them being private property, and then unpublished, new music was composed for them by Stevenson, with which they subsequently continued to be performed at the Dublin theatre. He also composed for the Irish stage, the music for the opera entitled "The Contract," written by Dr Holton, and for "Love in a Blaze," by Mrs Atkinson. He received the degree of doctor of music under circumstances highly creditable to his talents, and the members of the Hibernian Catch Club made him a present of a valuable silver cup, in testimony of their estimation of his abilities, and in consideration of the many delightful compositions, by which he had contributed to the entertainment of the club, as well as of other lovers of music. It has been said of him, that his genius as a musical composer was of the very highest order, and that he possessed various qualities seldom found concentrated in one individual. His most popular work, is the arrangement of the "Irish Melodies," adapted to words composed by Mr Thomas Moore, in which he may be said to have redeemed the character, and established the musical reputation of his native country. The operas, glees, and other concerted pieces of Sir John Stevenson, occupy a prominent position in the estimation of all the musical societies in both countries, and selections from his compositions are invariably made, and are always most successful in effect wherever festive and social meetings take place. His cathedral services and anthems, indeed all of his sacred music, including his Oratorio, are splendid compositions, original in conception, suitable in dignity, and expressive in execution. He had a pleasing and harmonious voice as a singer, and was a skilful performer. His death took place September 14, 1833, in the 74th year of his age, at the seat of his daughter, the

STL

marchioness of Hertford, in the county of Meath, in Ireland.—*Biog. Dict. of Musicians. New Month. Mag.*

STEWART (DUGALD) a celebrated writer on ethical and metaphysical science, who was professor of moral philosophy in the university of Edinburgh. He was the son of Dr Matthew Stewart, a distinguished mathematical professor in the same institution. He received his education at the High School of the Scottish metropolis, and in October 1766, he became the pupil of Dr Hugh Blair and Dr Adam Ferguson, at the university, devoting his attention chiefly to history, logic, metaphysics, and morals. Though he had previously paid but little attention to mathematics, yet in his nineteenth year he began to give lectures in the room of his father, who was incapacitated by indisposition, and he continued teaching the mathematical class with great success for about seven years; and when Dr Ferguson was sent by government to North America, Mr Stewart also gave lectures on moral philosophy; and on the resignation of that gentleman he succeeded to the vacant chair. In 1792 he published the first volume of his "Elements of the Philosophy of the Human Mind," of which work the second volume appeared in 1813; and the third in 1827. He printed, in 1793, "Outlines of Moral Philosophy, for the Use of Students;" in 1801, "Dr Adam Smith's Essays on Philosophical Subjects, with an Account of the Life and Writings of the Author;" "An Account of the Life and Writings of Dr Reid;" "A Statement of Facts relative to the Election of a Mathematical Professor of the University of Edinburgh," 1805; and "Philosophical Essay," 1818. He subsequently wrote part of the Preliminary Dissertation for the Supplement to the Encyclopædia Britannica. After the peace of Amiens Mr Stewart accompanied lord Lauderdale on a political mission to France; and he obtained in consequence of it a sinecure appointment, which afforded him an independence. During the premiership of the present marquis of Lansdowne he was constituted Gazette writer for Scotland. This distinguished philosopher, who was a member of the Academies of Sciences at St Petersburg, and Philadelphia, died at Edinburgh, June 11, 1828, aged seventy-five.—*Gent. Mag.*

STIFELS, or **STIFELIUS** (MICHAEL) a divine, was also a mathematician. He was born at Easingen in Germany in 1509, and died at Jena in 1567. He caused great alarm to the credulous and superstitious by prophesying the end of the world in 1553. He wrote treatises on algebra, on the calendar, and a curious one entitled "Arithmetica Integra."—*Moreri.*

ST LEGER (FRANCIS BARRY BOYLE) an ingenious writer, who was descended from a most respectable Irish family, connected with the nobility. His father being intimately acquainted with Francis lord Guildford, the son while very young was introduced to the distinguished circle at Wroxton, the seat of that nobleman, and frequently assisted in the dramatic performances which took place there,

STO

under the direction of John Kemble. He was educated at the grammar school of Rugby, and at the age of seventeen he went to India, to occupy an important civil situation, which had been obtained for him by his friends. Thus early entering into active life, he completed his education in the world; and unforeseen circumstances involved him in the execution of arduous duties, and placed him in circumstances of so much weight and responsibility, that his career in India subsequently became the subject of wonder to himself. Disgusted, however, with the customs of the country, and with what he called the tyranny and injustice of the Eastern government, he determined to relinquish his office; and sacrificing the prospect of obtaining a large fortune to his independence of principle, he returned to England, and entered as a student of the Inner Temple. From this period he devoted himself to literary pursuits; and besides contributing to various other periodical publications, he became the editor of "The Album." In 1823 he published "Gilbert Earl," a fictitious narrative of considerable merit, which became generally read and admired, and was followed by the "Blount Manuscripts;" "Tales of Passion," and other productions of a similar character. Although he wrote with great facility, he was never idle, and his literary occupations did not prevent him from pursuing his professional studies with a perseverance that, added to the oratorical talents he possessed, would in all probability have ensured his success at the bar, to which he was called, as a member of the Inner Temple, in 1827. His prospects of eminence as a barrister were, however, cut short by his death, which took place, November 20, 1829, at the age of thirty, after repeated attacks of epilepsy, supposed to have been occasioned by mental exhaustion, from too close application to study. At the time of his decease he had nearly completed a work founded upon the old chronicles, and he had projected "Histories of the Wars in Spain;" and of the "Reformation in France."—*Month. Mag.*

STOKES (DR JONATHAN) an eminent physician and writer on botany and the medical properties of vegetables. He assisted Dr Withering in the first edition of his "Botanical Arrangement of British Plants," published in 1776; but some difference of opinion relative to the conduct of the work taking place between the authors, Dr Stokes declined the undertaking, and resolved to publish his collection in another form, the result of which was "A Botanical Materia Medica," 1812, 4 vols, 8vo. He also furnished articles relating to botany for the "Encyclopædia Londinensis." After having been engaged in practice as a physician at Kidderminster, in Worcestershire, he removed to Chesterfield in Derbyshire, where he died in 1831, at the age of seventy-two.—*Edit.*

STORK (ABRAHAM) a Dutch landscape painter, was born at Amsterdam. He painted a fine picture of the reception of the duke of Marlborough in the river Amstel, and several

fine views on the Rhine. He died in 1706.—*Pitkington.*

STRANGE (Sir JOHN) a lawyer, was born in London in 1696. He was successively solicitor-general, recorder of London, and master of the rolls. He died in 1754; and the following year his "Reports" were published in 2 vols, folio, and again in 1775 in 4 vols, 8vo. —Sir JOHN STRANGE, his son, received his education at Clare hall, Cambridge, and was the British minister at Venice. He was attached to antiquarian pursuits, and possessed a fine library and museum, which were sold at his death in 1799.—*Nichols' Bowyer.*

STREIN, or **STRENIUS** (RICHARD) baron de Schwarzenaw, was a native of Austria, and was born in 1538. He was a Protestant, but notwithstanding he became superintendent of the finances, counsellor and librarian to the emperor at Vienna. His principal work is entitled "De Gentibus et Familiis Romanorum," folio. He died at Vienna in 1601.—*Dict. Hist.*

STRUVE (HENRY) an eminent Swiss physician, chemist, and mineralogist, who was born in 1751. After having completed his studies in medicine and natural philosophy at the university of Tubingen, he returned to his native country, where he was appointed professor extraordinary of chemistry in 1784. Regulations having subsequently been made in the mode of teaching that science, he received from the government the appointment of professor in ordinary of chemistry and mineralogy, and also that of inspector of mines. Among the many useful works which he published may be mentioned "Méthode Analytique des Fossiles, fondée sur leurs Caractères extérieurs," Lausanne, 1797, 4to; "Recueil de Mémoires sur les Salines et leur application," 1803, 8vo; "Description abrégée des Salines du ci-devant Gouvernement d'Aigle," 1804, 8vo; "Fragmens sur la Théorie des Sources, et sur son application à l'exploitation des Sources Salées," 1804, 12mo; "Abrégé de Géologie," 1818; "Observations sur le Gisement du Gypse Salifère, dans le district d'Aigle," 1825, 12mo. He likewise published annually, from 1805 to 1814, reports concerning the works projected or carried on in the mines and salt pits of the district of Aigle. His death took place at Lausanne, November 29, 1826.—*Rev. Encycl.*

STUART (JOHN) earl of Bute, a statesman somewhat favourably distinguished for his patronage of literature and the arts, but otherwise remarkably unpopular. He was born in 1713, and received a good education, having when quite young displayed an attachment to learning which he retained till the close of his life. In his ninth year he succeeded his father in the Scottish earldom of Bute, with the viscounty and barony of Mountstuart. In 1738 he married the only daughter of Mr Montague, by his wife the celebrated Lady Mary Wortley Montague, by whom he had several children, and with whom he is said to have lived on the most affectionate terms. He was introduced to Frederick Prince of

Wales, who in 1749 appointed him a lord of his bedchamber, and he soon appears to have become a great favourite both with the prince and the princess. The death of the former, in 1751, was productive of no disadvantage to Lord Bute, who at that time possessed great ascendancy over the mind of the heir apparent and his mother. He was made Groom of the Stole, and under that title had all the authority of governor of the young prince, who long continued completely under his influence. He did not, however, as was expected, take any high office on the accession of George III; but in 1761 he became secretary of state, and subsequently prime minister. His principal measure, while in that important station, was the conclusion of a treaty of peace with France; but this and other circumstances of his administration were so unacceptable to the people that he was induced to retire from office in April 1763, and he never afterwards openly interfered with public business. The remainder of his life was passed chiefly in literary retirement, and his death took place March 10, 1792.—*Georgian Era.*

STURGES (JOHN) LL.D. chancellor of the diocese and prebendary of Winchester, and chaplain in ordinary to his Majesty, known in the literary world as a theological writer. By the exact discharge of the various duties which his professional situations required he secured the gratitude and esteem of the people under his pastoral care; of the clergy of the diocese of which he was chancellor; and of the cathedral chapter of which he was during forty-eight years a useful and distinguished member. His extensive erudition rendered him an instructive companion, and his facility of manners and readiness of communication made him also generally agreeable. He published "Considerations on the Present State of the Church Establishment, in Reply to the Lectures on Non-conformity of Mr Robert Robinson," 1779, 8vo; "Remarks on Dodson's Translation of the Prophecies of Isaiah;" "Discourses on the Evidence of Natural and Revealed Religion," 8vo; and "Thoughts on the Residence Bill." He also engaged in a controversy with the celebrated Catholic divine Dr Milner, the result of which will of course be generally estimated differently by persons of different tenets, but it is scarcely possible to read without admiration the masterly "Letters to a Prebendary," addressed by the great Catholic polemic to the subject of this article. Dr Sturges died at Alverstoke, in Hampshire, and was interred in Winchester cathedral, October 9, 1807.—*Aikin's Athenæum.*

SUARD (J. B. ANTHONY) a French writer, born at Besançon in 1733, was the editor of the *Journal de Paris*. During the Revolution he conducted a publication entitled *Nouvelles Politiques*, in which professing to oppose democracy it was suppressed, and he was forced to quit France. When Buonaparte was first consul he returned, and became member of the legion of honour, and of the National Institute, and

SYM

perpetual secretary of the class of French literature. He then established a journal called *The Publiciste*, which was soon given up for the *Archives Littéraires*, and the *Opusculs Philosophiques*. He also wrote a "Life of Tasso," and contributed greatly to the *Biographie Universelle*. He died at Paris in 1817.—*Biog. Univ.*

SUICER (JOHN GASPARD) a Protestant divine, was born at Zurich in 1619, and was professor of Greek and Hebrew at Heidelberg, where he died in 1684. He published a compilation entitled "*Lexicon sive Thesaurus Ecclesiasticus Patrum Græcorum*," of which the best edition is that of Amsterdam, 1728, 2 vols, folio.—HENRY SUICER, his son, also a professor at Heidelberg, died in 1705.—*Moreri.*

SWANEVELT (HERMAN) a Flemish landscape painter, was born in 1620. He was a pupil of Gerard Douw, and afterwards in Italy of Claude Lorraine, whose jealousy he excited by his proficiency. He lived in the greatest retirement, which acquired him the name of the Hermit of Italy. He etched several landscapes. He died in 1680.—*D'Argenville.*

SWINDEN (TOBIAS) a clergyman, studied at Cambridge, where he took the degree of master of arts. He was rector of Caxton, in Kent. He wrote "An Enquiry into the Nature and Place of Hell," printed in 1714, and again, with a supplement by another person, in 1727. In this curious work he endeavours to prove that the sun is Tartarus. An Italian priest took the trouble to confute this opinion.—*Chalmers' Biog. Dict.*

SYMMACHUS (QUINTUS AURELIUS) a learned senator of ancient Rome, who lived in the fourth century. He was a man of illustrious birth, of great merit, and extremely eloquent, but strongly attached to the ancient superstitions of Paganism at a period when Christianity had become the religion of the Roman empire. He prostituted his talents in praising, in a base and flattering manner, the tyrant Maximus; but he in some measure

SZA

retrieved the fault by his more just eulogy of Theodosius. As he joined with his panegyric a demand for the re-establishment of the altar of Victory at Rome, he offended the emperor, who banished him from the city. St Ambrose of Milan, and the poet Prudentius, both wrote against Symmachus, in defence of Christianity. Theodosius was afterwards conciliated by an apology transmitted to him from this advocate for the ancient faith of the empire, whom he pardoned and admitted amongst the number of his friends. He flourished AD. 391.—*Moreri. Hoffman. Bayle.*

SYMMONS (CAROLINE) an English poetess, remarkable for unusual precocity of talent. She was the daughter of Dr Charles Symmons, (see DICT.) and was born in 1788. When extremely young she produced verses indicating extraordinary talents; and in conjunction with an elder sister she wrote a novel interspersed with poetry, which was destroyed. After her death, which took place July 13, 1812, her father published a collection of her compositions, including a narrative poem, entitled "Louisa," sonnets, and other pieces, displaying a fertile imagination, and considerable command of language. Prefixed to the volume, which also contains a tragedy, a translation of the fourth book of the *Æneis*, and other productions of the editor, is a biographical memoir of Miss Symmons, written by Archdeacon Wrangham.

SZABO (DAVID) a Transylvanian poet, born in 1739; and died in 1819. He wrote epigrams, "A Description of Rural Life," in hexameters; and other poetical productions, extending to three volumes, which have gone through many editions. He also published a volume on Magyar (Hungarian) prosody; and he translated Milton's *Paradise Lost*, and Virgil's *Æneid*; and wrote several volumes of criticism and of romance. Among the subjects on which he employed his pen, was likewise the "Improvement of National Instruction."—*Foreign Quar. Rev.*

TAL

TACHARD (GUY) a French jesuit. He accompanied the ambassadors sent by Louis XIV to Siam as a missionary. In 1688 he returned to Europe; but going again to India, he died at Bengal about 1694. His voyages were published in 2 vols, 12mo, Paris, 1689.—*Moreri.*

TALLENTS (FRANCIS) a nonconformist divine, was born in 1619 at Palsley, in Derbyshire, and was fellow of Magdalen college, Cambridge. In 1652 he became minister of St Mary's, Shrewsbury, but ten years afterwards he was ejected. He wrote a "View of Universal History, or Chronological Tables,"

TAS

folio, which was much esteemed. Mr Tallents died at Shrewsbury in 1708.—*Calamy.*

TASKER (WILLIAM) a poet, was a native of Devonshire, and was educated at Barnstaple, and afterwards studied at Exeter college, Oxford, where, after taking his degree in arts, he entered into orders. He held the living of Idlesleigh in Devonshire, which was sequestered. He died in 1800. He wrote translations of some of the odes of Horace and Pindar; "Letters on the Wounds mentioned by Homer and Virgil," &c. in 3 vols, 12mo; and an "Ode to the Warlike Genius of Britain."—*Gent. Mag.*

TAY

TAYLOR (HENRY) a clergyman, died in 1785. He was an Arian, notwithstanding which he obtained the livings of Portsmouth and Cranley in Hampshire. He wrote, "Thoughts on the Grand Apostasy," 8vo; "Ben Mordecai's Apology for embracing Christianity," 4to; and "Essay on the Beauty of the Divine Economy."—*Ibid.*

TAYLOR (JOHN) an ingenious public writer, who was the son of the once celebrated Chevalier Taylor, the oculist and autobiographer. (see Dict.) The subject of this article, in the early part of his life, adopted his father's profession, and is said to have acquired considerable reputation, but he quitted it for pursuits more agreeable to his taste. He became a proprietor of the "Sun" newspaper, with which he was connected for a long period, during which he furnished for its columns a great variety and abundance of light compositions. In 1791 he published a "Statement of Transactions respecting the King's theatre at the Haymarket;" and he was the author of short biographical memoirs which accompanied Cadell's British Gallery of Portraits. Mr Taylor also wrote a vast number of prologues, epilogues, songs, epigrams, and light poetical pieces, among the latter of which are humorous tales, as *Monsieur Tonson*, and a story of *Hayman and the Lion*, the merit of which was attested by the extraordinary degree of popularity they obtained. In 1811 appeared "A Collection of Poems," 8vo, including these admired productions; and at a later period of his life the author presented the public with a second and more extensive collection of his miscellaneous compositions, said to be much inferior to the former. His talents in conversation are said to have been not inferior to those displayed in the happiest productions of his pen; but the infirmities of his latter years withdrew him from society previously to his death, which took place at an advanced age, in May, 1832.—*Biog. Dict. of Living Authors.*

TAYLOR (SIR ROBERT) an eminent architect, who erected several public buildings in the metropolis. He was the pupil of Sir Henry Cheere, and after leaving him, he travelled to Rome, to complete his studies as a sculptor. Returning to England, he entered on his profession, and among works which he executed may be specified the monument of general Guest, in Westminster Abbey; the figure of Britannia, at the Bank of England; and the bas-relief in the pediment of the Mansion House. He afterwards relinquished statuary to devote himself to architecture. Among the structures which he erected were a beautiful villa at Richmond, for Sir Charles Asgill; and lord Grimston's mansion at Gorhambury; and he made considerable additions to the buildings of the Bank; and, in conjunction with Mr George Dance, he superintended the alterations of old London Bridge, in 1756 and 1758. He had a seat at the Board of Works, was surveyor to the Admiralty, Greenwich Hospital, and the Foundling Hospital, and held numerous surveyorships and agencies in

TER

different parts of the kingdom. He was a man of the most indefatigable industry, and extremely temperate. He always rose at four o'clock in the morning, and when he had a journey to make he always travelled through the night, sleeping in his carriage, instead of stopping on the road. His professional exertions raised him to great opulence, for it has been said of him that when he began life he was not worth eighteen pence, and at his death his property amounted to 180,000*l.* In 1783 he held the office of sheriff of London and Middlesex, and at that time he received the honour of knighthood. His death took place September 27, 1788, at the age of seventy-four.—*Gent. Mag.*

TERRY (DANIEL) an eminent actor, who appears to have been born at Bath about 1780. While quite a boy he contracted a partiality for the stage, which however he was not allowed to indulge, but became the pupil of Mr Wyatt, the architect, with whom he continued for five years. At the end of that period, having no immediate prospect of success in the profession to which he had been bred, he turned his attention to the drama. His first efforts were in private theatricals, after which he was engaged for a few months at Sheffield. Not meeting with the success which perhaps he expected, in 1803 he resumed his architectural pursuits, which he a second time relinquished, and went upon the stage, becoming a member of the Newcastle company, under the management of Stephen Kemble. And in this situation he remained till the autumn of 1806. He afterwards went to Liverpool, where he made great progress in his adopted profession, and in the favour of the public. In the winter of 1809, he became a leading actor at Edinburgh, and while in that city he is said to have written dramatic criticisms, in a newspaper published by Mr Ballantyne, who introduced him to Sir Walter Scott; and through his interest he obtained an engagement at the Haymarket theatre, London, where he made his first appearance, April 20, 1812, as lord Ogleby, in the "Clandestine Marriage." After remaining there two seasons he came out at Covent-garden theatre, in September, 1813, which house he quitted for Drury-lane, where he remained till the autumn of 1825, generally playing in the summer at the Haymarket. He then purchased and opened the Adelphi theatre in the Strand, in partnership with Mr Yates. The undertaking proved generally profitable; but Sir Walter Scott, who had become security for his share of the purchase money, being involved in difficulties, from the bankruptcy of Constable, the Edinburgh bookseller, Mr Terry found it necessary to sell his share in the theatre. He then went over to the continent, where mental anxiety brought on disease, and returning to England in a state of great debility, he died of palsy, June 23, 1828. While in Scotland, Mr Terry married Miss Nasmyth, daughter of the celebrated landscape painter, and herself a cultivator of the fine arts.—*Month. Mag.*

THEODORE (ANTHONY) baron Newhoff, an extraordinary adventurer, was a native of Prussia. He entered into the army, in which he distinguished himself, serving under various European powers. He went to Corsica in 1736, where gaining the favour of the insurgents, they elected him their chief, and crowned him king of the island. He was soon obliged to leave his kingdom, in search of succour, which he vainly tried to obtain. After seeking asylums in various countries, he came to England, and was for many years in the King's Bench prison, from which he was released and supported by subscription until his death, which took place in 1756. He was buried in Soho churchyard, and a monument was raised to his memory.—His son, **FREDERIC**, became an officer in a foreign service, but being reduced to great necessity, he shot himself in 1797. He was the author of "*Mémoires pour servir à l'Histoire de Corse*.—*Ann. Necrol.* 1798.

THEVENEAU (CHARLES S.) a French poet and mathematician, born at Paris about 1759. He studied at the college of Mazarin with such success, that at the age of fifteen he became a teacher of mathematics at Brest. During the Revolution he lived in obscurity, applying himself solely to literature and science. Theveneau sometimes transferred the merit of his productions to persons ambitious of literary distinction, to which their talents would never have entitled them. He died in 1824. Among his works are "*Cours d'Arithmétique*, à l'Usage des Ecoles Centrales," 1800, 8vo; "*Plan du Poème de Charlemagne, suivi du premier Chant en Vers et d'un Choix de Poésies Diverses*," 1804, 8vo; "*L'Illusion, Poème*; suivi d'Autres Poésies," 1816.—*Biog. Nouv. des Contemp.*

THEVET (ANDREW) a French Franciscan, was born at Angoulême in 1502. He travelled to the Holy Land, to Egypt, and to the Brazils. On his return he relinquished his religious habit, and became almoner to Catherine de Medicis, historiographer of France, and cosmographer to the king. He wrote "*Singularités de la France Antarctique*," 4to; "*Cosmographie du Levant*," 4to; "*Histoire des Hommes Illustres*." He died in 1590.—*Moreri*.

THIRLWALL (THOMAS) an episcopal clergyman and theological writer, who was a native of Yorkshire. He studied at Brazenose college, Oxford, where he took the degree of MA. in 1786. Having been ordained, he became curate of Trinity church, in the Minories, London, afterwards curate and lecturer of Stepney, and at length rector of Bower's Gifford, in Essex. At one period he was an active public character, and distinguished as a speaker at the East India House, the Middlesex election, and on other occasions; and he was also a county magistrate. Besides single sermons and tracts, he published "*Diatessaron, seu Integra Historia D. N. Jesu Christi, Latine, ex Quatuor Evangeliiis*," 1803, 12mo; 2d edit. 1815. In 1817 he attracted public notice by his "*Vindication of the Magistrates of the Tower Division, from Charges contained in*

the Report of a Committee of the House of Commons;" which being considered as interfering with the privilege of parliament, Mr Thirlwall was obliged to make an apology to the House. He died March 17, 1827.—*Gent. Mag.*

THUNBERG (CHARLES PETER) professor of natural history in the university of Upsal, where he died in the eighty-fifth year of his age, August 8th, 1828. He was the pupil and the successor of the celebrated Linnæus; and he pursued the study of botany with the greatest zeal and ability during more than half a century. His various publications connected with natural history, especially those which illustrate the botany of Japan, raised him to a high station among men of learning and science. He was a member of a vast many philosophical societies in Europe and America; and was highly esteemed throughout the scientific world. A sketch of the life of this naturalist is given in the body of the work. In that article his death is said to have taken place in 1799, an error originating in the continental journals, and copied by one authority from another, precisely as in the curious instance of the ex-president of the United States, John Adams.—[See vol. i. art. ADAMS.]—*For. Rev.*

TIERNY (GEORGE) a distinguished statesman and political writer. He was the son of a London merchant, and was born in 1756. Being designed for the bar, he was educated in one of the Inns of Court, but his inclination led him to prefer political science and financial speculations to the dry practice of the courts of law and justice; and having obtained possession of considerable property by marriage, he was enabled to indulge his inclination. But he appeared as an author before he became a statesman, having published, in 1787, a pamphlet entitled "*The real Situation of the East India Company considered with reference to their Rights and Privileges*," 8vo. At the commencement of his public life, Mr Tierney attached himself to the party of the opposition. At the election of 1790 he became a candidate for the borough of Colchester, but was defeated after incurring great expense. He next tried his strength, supported by the popular interest, against George Woodford Thelluson, at Southwark, in 1796, and here, though he failed on the poll, he succeeded by petition in displacing his rival on the Treating Act. He continued representative of Southwark till 1806, when he resigned, and he afterwards represented successively Athlone, Bandonbridge, Appleby, and Knaresborough. He soon attained high reputation as a debater in parliament, and was one of the most formidable opponents of Mr Pitt. In 1797 he gave notice of a motion relative to the alleged disability of Mr Dundas as a member of parliament, in consequence of his acting in the capacity of third secretary of state. In the month of March following, he supported a bill brought into the house of Commons, to enable his majesty more effectually to provide for the defence and security of the realm; and in 1798 he also voted for

the suspension of the Habeas Corpus act. Soon afterwards he supported colonel Walpole, in his inquiry into the conduct of the assembly of Jamaica, relative to the transportation of the Maroons; and in the summer of the same year, in consequence of the melancholy aspect of affairs in Ireland, he declared that the minister ought to come down to the house clothed in sackcloth and ashes, on finding public affairs in such a critical state in the fifth year of war, after an expenditure of about two hundred millions of money. In 1798 he fought a duel with Mr Pitt, in consequence of some pointed observations on his political conduct, made by the minister in the house of Commons; but the affair terminated in an exchange of shots, without either party being wounded. Though he was an uniform opponent of the war with France, yet he cordially joined in the vote of thanks, in the house of Commons, to lord Nelson, on account of his victory at Aboukir. His opposition to the war rendered him likewise an opponent of the financial system of Mr Pitt. He had made the science of finance his great study, and for several years it was his almost uniform custom to bring forward a series of resolutions in opposition to those of the chancellor of the exchequer. On the change of administration, previous to the peace of Amiens, Mr Tierney was appointed treasurer of the navy, when he obtained a pension for his lady. He now became lieutenant-colonel commandant of the Somerset house volunteers, and he also had the same rank in a regiment raised in the borough of Southwark; but shortly afterwards, some differences arising between these corps and their commander, he resigned his commissions, and at the next election, Mr Tierney lost his seat in parliament. During the administration of Fox and Greuville, he was first Irish secretary, and afterwards president of the Board of Control. But when his party quitted office, he also retired, and on the death of Mr Ponsonby, he became leader of the opposition in the house of Commons. On the formation of the Canning ministry, he was made master of the mint, but he went out of office with lord Goderich. His death, which was occasioned by an enlargement of the heart, took place very suddenly, at his house in London, January 26, 1830. Mr Tierney always claimed great attention from the house of Commons for the extent of information, closeness of reasoning, and poignant irony. He died generally respected by all parties — *Month. Mag. Georgian Era.*

TOLER (JOHN) earl of Norbury, an eminent Irish lawyer, who was chief justice of the court of common pleas, in Ireland. He was descended from a family originally established in Norfolk, one of whom, a captain in the army of Cromwell, settled in Ireland. He was born December 3, 1745; and was the second son of Daniel Toler, esq. of Beechwood, in the county of Tipperary. He was called to the bar in 1770, and in 1776 he was first returned to the Irish house of Commons, as one of the members for Tralee; in 1781 he was appointed a king's counsel, and in 1784

he became chairman of the quarter sessions at Kilmainham; and in the same year he was chosen one of the representatives of the borough of Philipstown, in King's County. In 1789 he was appointed solicitor general, and in 1798 attorney general, and a member of the privy council of Ireland. During the latter year he was actively engaged in the prosecution of the Irish rebels. He was advanced to the office of chief justice of the common pleas in Ireland, in December, 1800; and he was also created lord Norbury: he retained the chief justiceship till 1827; when, on his retirement, he obtained a pension of 3046*l.* and was advanced to the title of viscount Glandine and earl of Norbury. He died at Dublin, July 27, 1831. After the recollection of the civil commotions in which he had played so remarkable a part began to subside, lord Norbury was chiefly known from his reputation for wit and drollery. "Lord Norbury's last Joke" has been an ordinary title to a witticism in the newspapers: it is hardly necessary to add, that much was attributed to him which did not belong to him, and many a dealer in illegitimate puns, who was ashamed of owning his own productions, laid his spurious offspring at his lordship's door. It is, however, matter of history that the court of common pleas of Dublin was frequently thronged with idlers attracted by the amusement which was to be found in the humorous conduct of its proceedings. The spirit of the judge naturally extended itself to the counsel; his principal auxiliaries were Messrs Grady, Wallace, O'Connell, and Gould, who played against each other, and occasionally involved the court in such a general clamour, that it was difficult to determine whether the exclamations of the parties, the protestations of the witnesses, the cries of the counsel, the laughter of the audience, or the Stentorian voice of the chief justice predominated. At length, however, his lordship's superiority of lungs prevailed, and like Æolus in his cavern, he shouted his stormy subjects into peace. These scenes repeatedly occurred during a trial, until at last both parties had closed, and a new exhibition took place, on his lordship's delivering his charge. It was thought that he had an habitual leaning to the side of the plaintiff, but he usually began by pronouncing high encomiums on the opposite party. For this the audience were well prepared; and, accordingly, after he had stated that the defendant was one of the most honourable men alive, and that he knew his father, and loved him, he suddenly came, with a singular emphasis, which he accompanied with a strange shake of his wig, to the fatal "but," which made the audience, who were in expectation of it, burst into a fit of laughter. He then proceeded to enter more deeply, as he said, into the case, and flinging his judicial robe half aside, and sometimes casting off his wig, started from his seat, and threw off a wild harangue, in which but little law, method, or argument could be discovered, amidst the anecdotes connected with his early life, jests from Joe Miller, and others of his

own, and sarcastic allusions to any of the counsel who had endeavoured to check him during the trial. He was exceedingly fond of quotations from Milton and Shakspeare, which, however out of place, were very well delivered, and evinced an excellent enunciation.—*Ann. Biog.*

TOLLET (ELIZABETH) an accomplished lady, was born in 1694. She was a perfect mistress of the Latin, French, and Italian languages. She continued in a state of celibacy, and died at Westerham in 1751. A volume of her poems was published after her death.—Her nephew, GEORGE TOLLET, Esq. a member of Lincoln's-inn, and fellow-commoner of King's college, Cambridge, wrote notes on Shakspeare. He died in 1779.—*G. Biog. Dict.*

TOMLINE (GEORGE) a distinguished English prelate, whose family name was Prettyman. He was the son of a tradesman at Bury St Edmunds, in Suffolk, where he was born about the year 1750. From the grammar-school at that place he was removed to complete his education at Pembroke hall, Cambridge. He applied himself with such success to his studies, that he came out senior wrangler in 1772; and having been chosen fellow of his college in 1781, he served the office of moderator. Previously to his obtaining this promotion, he filled the station of academical tutor to Mr. Pitt, who, on becoming chancellor of the exchequer, made Mr. Prettyman his private secretary. He also procured for him, in the first instance, the valuable rectory of Sudbury, with the chapelry of Orford, in Suffolk; and then a prebendal stall in the church of St Peter, Westminster. On the translation of Dr Thurlow to the see of Durham, in 1787, the influence of his powerful patron was exerted to raise Dr Prettyman to the bishopric of Lincoln, to which was soon after added the deanery of St. Paul's. He is said to have been offered the bishopric of London, and to have declined the promotion. While secretary to the premier, he was most severely satirized by the author of Probationary Odes for the Laureateship, who described him as a man destitute of all regard for truth. Of course little attention is to be paid to an imputation arising from the virulence of party spirit; for although deemed somewhat close in the way of economy his general character was always irreproachable. As a prelate, he governed his diocese in a most exemplary manner, being vigilant, impartial, and compassionate. In 1799 he published a work, entitled "Elements of Christian Theology," 2 vols, 8vo, which, though professedly written for the use of students in divinity, is also well adapted for general perusal, and has passed through several editions. The following year the bishop published a Charge to the Clergy of his diocese; and in 1812 appeared his "Refutation of the Charge of Calvinism against the Church of England," 8vo, which involved him in a controversy with the Rev. Thomas Scott, and other advocates for Calvinistic principles. It was in the year 1820 that Dr. Tomline was translated to the see of

Winchester, the second diocese, in point of emolument, in the kingdom. Several years since, a person, to whom the bishop was almost unknown, bequeathed him a very considerable fortune, on condition of his taking the name of Tomline. The death of this successful and learned divine took place on the 8th of November, 1827. Besides the works mentioned above, he published a thanksgiving sermon, preached before the king and parliament in 1796; and the "Life of the Rt. Hon. William Pitt," which last work was not distinguished by that peculiarity of information which the author was considered qualified to impart, and which the public consequently expected.—*Monthly Mag.*

TOMLINS (ELIZABETH SOPHIA) an ingenious poetess, novelist, and miscellaneous writer, born in London in 1768. She was the daughter of Thomas Tomlins, esq., an eminent solicitor, well known in political circles at the close of the last century. She manifested at an early age both taste and talent for poetry, as appears from her productions, published by her brother under the title of "Tributes of Affection." Afterwards turning her attention to the composition of tales and novels, she published successively several works, the most popular of which was "The Victim of Fancy," on the model of Goethe's Werter, but free from the objections urged against that production on the score of its immoral tendency. Besides various other novels, she wrote a ballad, entitled "Connell and Mary," printed in Dr Langhorne's selection; and was a considerable contributor of fugitive poetry to various periodical publications, from 1780 to 1827. Miss Tomlins also translated the first History of Napoleon Buonaparte that ever appeared in this country; and part of the Universal History of Anquetil. She died in consequence of a fall from her horse, at her residence at Chaldon in Surrey, August 8th, 1828.—*Ibid.*

TONE (THEOBALD WOLFE) an Irish revolutionary politician, and military officer, born at Dublin, June 20, 1763. His parents were Protestants, and though he joined the Catholic party in politics, he never professed their religion, and according to Sir Richard Musgrave he was an avowed Deist. He married young, and practised at the bar, but with no great success. In 1789 he published a pamphlet entitled "A Review of the last Session of Parliament," which met with great encouragement. The state of his feelings and sentiments at this period he thus describes: "To subvert the tyranny of our execrable government, to break the connexion with England, the never-failing source of our political evils, and to assert the independence of my country—these were my objects. To unite the whole people of Ireland, to abolish the memory of all past dissensions, and to substitute the common name of Irishmen in the place of the denomination Protestant, Catholic, and Dissenter, these were my means. . . . The Protestants I despaired of from the outset, for obvious reasons." In

pursuance of his purpose Tone displayed great perseverance and skill. After having written a tract in favour of an union of sects, he was invited to Belfast, where he assisted in forming the first club of United Irishmen, in October 1791. From Belfast he returned to Dublin, and there formed, chiefly from the Protestants, the first club of United Irishmen in that metropolis, of which the Hon. Simon Butler was chairman, and the famous Napper Tandy was secretary. The first clubs were seditious, they soon became treasonable. Not long after this Tone was chosen agent of the Catholic committee of Ireland, instead of Richard Burke, the son of the celebrated Edmund Burke, who, while he held this office, had acted with great folly, and was suspected of insincerity. With the assistance of their new agent, or secretary, the plans of the Catholic committee were pursued with considerable success. A delegation was organized, the Catholics assumed confidence, and they obtained concessions from government greatly to their advantage: they were admitted to the elective franchise and many inferior privileges, though still excluded from parliament and from various high offices. Tone perceived and pointed out with great acuteness, the errors of this plan. He saw that it gave the Catholics power, and left them the temptation to be mischievous to the state; that in effect it must give rise to great irritation and discontent among the wealthier and more influential classes of the Catholic population; as he himself observes, by granting the franchise and withholding seats in parliament, the Catholic gentry were at once compelled and enabled to act with effect as a distinct body and a separate interest; they received a benefit with one hand and a blow with the other, and their rising gratitude was overpowered by their just resentment, which at the same moment they were furnished with the means and the provocation to justify. Early in 1794 the Rev. W. Jackson, (See Dict.) arrived in Ireland with a commission from the revolutionary government of France, to ascertain whether the people of Ireland would join the French. Tone became involved in the embryo conspiracy formed by this man, whose plans being discovered, he was tried for treason and avoided punishment by a voluntary death. Tone made a sort of compromise with the British government, and was permitted to withdraw himself from Ireland, without giving any pledge as to his future conduct. He consequently emigrated with his family to America in June, 1795. He settled for some time at Philadelphia, where he met with Hamilton Rowan and Dr Reynolds, two Irish refugees. He had the means of establishing himself comfortably in the United States, and for a time he was disposed to do so, but he was urged on by his own inclinations, the entreaties of his friends in Ireland, and, strange as it may appear, likewise by those of his wife and sister to go to France, to procure assistance to liberate his country. Actuated by these motives, he determined to

engage in the hazardous enterprize. Setting sail from America, he arrived at Havre, February 1, 1796, and thence proceeded to Paris. Without loss of time he applied himself to the main object of his mission, to inform the French government of the strong inclination of the Catholics and Dissenters in Ireland to throw off the yoke of England, and for that purpose to procure the assistance of an armed force from France, as their point of support till they could establish a regular organization. After encountering some delays and overcoming some difficulties, the Directory entered into his views, and resolved to prosecute them, even at the expense of sacrifices of much importance to a government then in want both of money and credit. An expedition was fitted out, consisting of seventeen sail of the line, thirteen frigates, and other vessels of war and transports, making in all forty-three sail, carrying thirteen thousand nine hundred and seventy-five soldiers for the expedition, forty-one thousand one hundred and sixty stand of arms, twenty field pieces, and nine pieces of artillery for sieges, with a great quantity of stores. General Hoche was appointed commander-in-chief of the army, and the naval command was given to Admiral Morand de Galls; Tone was appointed by the Directory Chef de Brigade, and afterwards Adjutant-general, and he was treated by Hoche with great kindness and confidence. The fleet sailed December 15, 1796. The vessels soon parted company, and on the 21st, when they made Cape Clear, the first place of rendezvous, seven sail were missing, and among them the *Fraternité* frigate, which carried both Hoche and the Admiral. The General of the highest rank in that part of the fleet which was not dispersed was Grouchy, afterwards made a marshal. On the morning of the 22d these vessels, thirty-six in number, neared Bantry Bay but the following night it blew a gale, and twenty of the thirty-six ships were driven out to sea, sixteen however, including nine or ten of the line, having on board about six thousand five hundred soldiers, anchored in the bay. Grouchy now resolved upon landing, but the prevalence of the east wind prevented the boats from reaching Bantry; on the 26th other ships were blown to sea, and on the night of the 27th a hurricane arose, in consequence of which three ships of the line and a frigate only remained together; the Commodore in command then resolved to return to France, and they reached Brest in safety January 13, 1797. Thus it is not impossible that the stormy weather alone at this period saved Ireland from conquest, or revolution. Undismayed by all the obstacles which he encountered, Tone persevered in those plans which he conceived to be so conducive to the salvation of his native country. Foiled in his endeavours to persuade the French government to undertake another expedition on a large scale, he at length sailed for Ireland in one of those petty armaments the inefficiency of which he

thought perhaps might be remedied by his own courage and experience. He was taken prisoner in the Hoche, after fighting bravely in a desperate action, was tried by a military commission and was sentenced to be hanged. The Court of King's Bench ordered execution to be stayed. He cut his throat in prison, and after languishing a few days died. His conduct before the court martial displayed admirable calmness and resolution, and the letters which he wrote to his wife after his conviction breathe the same spirit. He seems to have been irreproachable in all the relations of domestic life and social intercourse; a man of sense, gaiety, courage, and talents—that such a man should have been a conspirator against the government of his country, was rather the fault of the times than of the individual. His death took place Nov. 19th, 1798.—*Autobiographical Memoir of T. Wolfe Tone*, 2 vols. *Land. Mag.*

TORRIJOS (DON JOSE MARIA) a Spanish patriot, who was descended from one of the most distinguished families in Madrid. He received his education at the College of the King's Pages, upon leaving which establishment each student had his choice of a situation in the church or the army. He preferred the latter, and served against the French during the war of independence, in which he honourably distinguished himself, and gradually passing through the inferior posts, he obtained the rank of colonel in the field of battle. After the restoration in 1814, he shared in the disgrace of those whose courage and patriotism had rescued from captivity their worthless sovereign: he still however endeavoured to effect the emancipation of his country from despotism, but his schemes were betrayed and he was imprisoned in the dungeons of the Inquisition at Murcia, where he had remained more than a year when he was liberated by the revolution of 1820. The Cortes made him field-marshal, and chief-commandant of Navarre and the Basque provinces; and he took the most active part in all the political movements during the constitutional regime. When the French invaded Spain, Torrijos held out to the last: he signed the capitulation of Carthage after Cadiz had surrendered, and gave up his arms to General Mina. He remained in exile from 1823 till the revival of liberty in France, when he resolved to renew his efforts for the liberation of Spain. He fell in the attempt, for having been induced, by false and treacherous intelligence, to quit his asylum at Gibraltar, together with a few friends, he landed in Spain, but on repairing to Malaga, where he had been taught to expect that the soldiery would join him, Torrijos and his brave companions were made prisoners, tried by a court-martial and shot, immediately after the return of a messenger from Madrid.—*New Month. Mag.*

TOSTATUS (ALPHONSUS) a Spanish prelate, a native of Medrigale. At the age of twenty-two he became a doctor at Salamanca. He was bishop of Avila, and being sent to the council of Basil, he greatly distinguished

himself by his masterly eloquence. He died at the premature age of forty, in 1454. His works amount to 27 vols, folio.—*Moreri*.

TOWNSEND (JOHN) an independent minister, who was the founder of the deaf and dumb asylum. He was born in the parish of Whitechapel, London, March 24, 1757; and he received his education at Christ's hospital, after which he was apprenticed to his father. Becoming a member of the methodistical society in Tottenham-court-road, he was employed as an occasional preacher at different places in and near the metropolis. At length he settled as minister to an independent congregation at Kingston in Surrey, whence in 1784 he removed to Bermondsey, where he passed the remainder of his life. In 1792 he founded the institution for the deaf and dumb children of indigent parents, in which he was assisted by the Rev. H. C. Mason, the parochial minister of Bermondsey; and this charity obtained such extensive and efficient patronage, that in 1807 an edifice for the reception of 150 children (since enlarged to admit 200) was erected under the auspices of the duke of Gloucester. Mr Townsend also instituted a congregational school, for the gratuitous education of the children of necessitous dissenting ministers; and he assisted in the formation of the Missionary Society, the British and Foreign Bible Society, the Religious Tract Society, the Female Penitentiary, and other charitable and religious associations. He died February 7, 1826. Besides several single sermons, and other detached pieces, he published "Nine Discourses on Prayer," 1799, 8vo; "Hints on Sunday Schools and Itinerant Preaching," 1801, 8vo; a translation of Claude's Defence of the Reformation, with a biographical preface; and in conjunction with the Rev. Henry Cox Mason, under whose name the work appeared, he produced a Family Bible, with notes, 4to.—*Memoirs of Rev. J. Townsend*, 1828, 8vo.

TRANT (THOMAS ABERCROMBIE) a military officer, known in the literary world as the author of a work entitled "Two Years in Ava," containing the result of observations made while he was engaged in professional service in that country; and "A Narrative of a Journey through Greece," performed during the winter season, when he had been intrusted with despatches from Sir Frederic Adam to the British government. He was the only son of major-general Sir Nicholas Trant; whom while yet a boy he accompanied to Spain, where that officer served under the duke of Wellington. After the termination of the war he received a military education in France and England. The first commission he held was in the 38th regiment of foot, which he joined in 1820, at the Cape of Good Hope, where he was employed by the governor, Sir Rufane Donkin, in the survey of an extensive tract of country between the rivers Berg and Oliphant. In 1821 he proceeded with his regiment to Bengal; and being engaged in the expedition to Ava, he executed the duties of an assistant quarter-

master-general. Having returned to England in 1826, he was the following year placed on full pay of the first West India regiment at Trinidad; and he remained more than twelve months in that station. He subsequently obtained the appointment of sub-inspector of militia in the Ionian isles, and the staff in the Mediterranean being reduced, he was transferred to the 28th regiment, to which he belonged at the time of his death, March 13, 1832. Though cut off at the early age of twenty-seven, he had seen a good deal of service, and greatly distinguished himself in his profession; and being also highly esteemed and well connected, he had a fair prospect of obtaining rank and honour, when he sunk beneath the protracted sufferings resulting from the injury his constitution had experienced in consequence of arduous services in unwholesome climates.—*United Service Journal*.

TRONCHET (——) a French lawyer, a counsellor of the parliament of Paris, who before the Revolution was regarded as one of the most distinguished ornaments of the bar. In 1789 he was chosen a deputy from the Tiers Etat of Paris to the States General, when owing to his moderation he obtained but little influence in the National Assembly, but he was a very efficient member of the committees. In March 1791 he presided in the Assembly, and in June that year he was one of the three commissaries appointed to receive the declarations of the royal family on their return from Varennes. On the trial of Louis XVI, M. Tronchet was selected by that prince as one of his official advocates, and he acquitted himself of the arduous task with great spirit and ability. In September 1793 an order was issued for his arrest, but he succeeded in concealing himself till the danger was over. He was nominated a deputy from the department of Seine and Oise to the Council of Ancients in September 1795: and he continued to belong to that body till the revolution of the 9th of November 1799. Under Buonaparte he was a member of the Tribunal of Cassation; he had an important share in drawing up the body of civil law called the "Code Napoleon," in which he was associated with Crassous and Vermeil; and he was at length made a senator. His death took place March 10, 1806. He was the author of a tragedy; and he published several translations from the English poets and historians.—*Dict. des Hommes Marq. du 18me. S. Blog. Nouv. des Contemp.*

TROTTER (THOMAS) MD. a distinguished medical writer, who was a native of Roxburghshire, in North Britain, and was educated at the university of Edinburgh with a view to the medical profession. In 1782, while still very young, he was appointed a surgeon in the royal navy; and in his "Observations on the Scurvy," (published in 1786,) he states that he was the first member of his corps who was obliged to seek employment in the African trade. He returned home in 1785, and in

1788 he obtained his doctor's degree at Edinburgh, delivering as his thesis an Essay on Intoxication, "De Ebrietate." In 1789, through the friendship of admiral Roddam, he was appointed surgeon of his flag-ship. In 1790 he published a "Review of the Medical Department of the British Navy;" in 1793 he was appointed physician to the Royal Hospital at Portsmouth; and in the next year physician to the fleet. The medical discipline of the navy had previously to this period been in a miserable state, and Dr Trotter deserves the praise of having introduced many important and advantageous arrangements. Among the prisoners taken in the battle with the French on the 1st of June, 1794, a kind of putrid fever broke out, which was completely repressed through the exertions of Dr Trotter. In the spring of 1795, a most virulent and general scurvy prevailed in the fleet, and he, with the promptitude natural to his character, addressed to the admiralty such representations as procured supplies of fresh vegetables and acid fruits, and the disease was presently got under. Dr Trotter received no more substantial mark of the deeply earned gratitude of his countrymen, than an annual pension of 200*l*. On his retirement from the public service he settled at Newcastle, where he long practised as a physician with great reputation. His professional works deservedly rank high, and their titles are, "De Ebrietate, ejusque Effectibus in Corpus Humanum," 1788; "Medical and Chemical Essays," 1796, 8vo; "Medica Nautica, or an Essay on the Diseases of Seamen," 1799, 3 vols, 8vo. An English edition of his "Essay on Drunkenness," 1804; fourth edition 1812; "An Address to the Proprietors and Managers of Coal Mines, on the Means of destroying Damp," 1806, and "A View of the Nervous Temperament, being a Practical Treatise on Nervous, Bilious, Stomach, and Liver Complaints," 1812, 8vo. He also published "Suspiria Oceani, a Monody on the late earl Howe," 1800; "The Noble Foundling," a Tragedy, 1813; a volume of poems, besides many communications to the Medical Journal, the European Magazine, and other periodical works. Dr Trotter died at his residence at Newcastle-upon-Tyne, September 5, 1832.—*Gent. Mag. Biog. Dict. of Living Authors*.

TSCHIRNER (Dr HENRY GOTTLIEB) an eminent German theologian, chief minister of St Thomas's church at Leipsic, and second professor of divinity in the University there, died in the fiftieth year of his age, February 17th, 1828. He was the author of "Christian Apologetics;" of "Protestantism and Catholicism considered in a Political View," 1822; and of "The System of Reaction," 1824. The two works last-mentioned excited a great sensation in Germany at their first appearance, and were translated into different languages. Professor Tschirner, who was reckoned one of the most eloquent preachers of modern Germany, left a number of Sermons in MS. from which three volumes have been selected for publication. A posthumous work

TUC

by the same writer, entitled "The Fall of Paganism," in five books, forming 2 vols, 8vo, has been announced as the greatest of all his productions, the principal object of twenty years' research, presenting a faithful, complete, and animated picture of the most important event in the history of the world, and raising the author to a level with Gibbon, John Muller, Herder, &c.—*For. Quart. Rev.*

TUCKER, or TOOKER (WILLIAM) a learned divine, was born at Exeter, and was educated at Winchester school, whence he removed to New College, Oxford, of which he became fellow. In 1585, being appointed archdeacon of Barnstaple, he resigned his fellowship. He was afterwards chaplain to queen Elizabeth, prebendary of Salisbury, and dean of Lichfield. He died in 1620. He was the author of a curious book, entitled "Charisma sive Donum Sanationis seu Explicatio totius quæstionibus de mirabilium sanitatum gratia," 1597, 4to.—*Wood. Prince.*

TUCKER (ST GEORGE) an American lawyer and republican statesman, who was distinguished in the United States by the title of "The American Blackstone." In the war which preceded the independence of the British colonies he employed both his sword and

TUC

his pen. While in the command of one of the revolutionary regiments he was severely wounded in a charge of infantry, his knee-joint having been fractured by a soldier's bayonet, which occasioned a permanent stiffness of the joint. His brother, Thomas Tudor Tucker, at one time treasurer of the United States, and the friend of Washington, has been heard to declare, that Mr St George Tucker's poem on Liberty was equal to the reinforcement of ten thousand disciplined troops. His death took place at Norfolk in Virginia, in March, 1828.—*Month. Mag.*

TUCKEY (JAMES HINGSTON) a nautical writer, was born in 1776, at Greenhill, in the county of Cork. Entering the navy in 1794, he went to India, and became a lieutenant. He went to New South Wales in 1803, and made several surveys of the coast, which were published with an account of his voyage. In 1805 he was taken prisoner by the French, and remained in confinement until the fall of Buonaparte. He then commanded an expedition to explore the river Congo, during which he was seized with an illness, of which he died in September 1816. While in prison he wrote a "Maritimé Geography," 4 vols, 8vo.—*Gent. Mag.*

USH

URRY (JOHN) a native of the north of England, was a student of Christchurch, Oxford. He commenced an edition of Chaucer, but did not live to finish it. A handsome folio volume was published in 1721, with his portrait and a preface. He died in 1714.

USHER (JOHN) a Roman Catholic and native of Dublin, was born in 1720. He was successively a farmer, a linen-draper, and a priest. He then established a school at Kensington, where he died in 1772. He wrote an

UZ

"Introduction to the Theory of the Human Mind," 8vo; "Clio, or a Discourse on Taste;" and some pamphlets.—*Europ. Mag.*

UZ (JOHN PETER) a distinguished lyric German poet, who occupied the office of assessor of the tribunal at Nuremberg. A collection of his poetical works was published at Leipsic 1786, 12mo; and a more complete edition of them has appeared in 2 vols, 8vo. He died in 1796.

VAL

VALINCOUR (JOHN BAPTIST DU TROUSSET de) historiographer to the king of France, secretary to the royal closet, and member of the Academy, was born at St. Quentin, in Picardy, in 1653, and died in 1730. His works are a "Life of Francis de Lorraine, Duke of Guise;" "Observations upon the Œdipus of Sophocles;" and "A Critique upon the Romance of the Princess of Cleves."—*Dict. Hist.*

VALPY (EDWARD) a learned clergyman, the brother of Dr Richard Valpy, master of the grammar-school at Reading. He was educated at Trinity college Cambridge, where

VAL

he took the degree of B.D. and after having been assistant several years in the school at Reading, he obtained the mastership of the grammar-school at Norwich. He was rector of All Saints Thwaite, and vicar of St. Mary Walsham, Norfolk; and he had resigned his office as a schoolmaster previously to his death, which took place at Southton Yarmouth, April 15, 1832, in the sixty-ninth year of his age. He published "Elegantissæ Latinnæ, or Rules and Exercises illustrative of an Elegant Latin Style," 1803, 12mo; and "A new edition of the Greek Testament, with Griesbach's Text, and copious notes from

Hardy, Raphel, Kypke, Schleusner, Rosenmuller, &c. in familiar Latin, with parallel passages from the classics, and references to Vigerus for Idioms, and Bos for Ellipses," 1815, 3 vols, 8vo.—*Orig.*

VANDAMME (General) Count of Unebourg, a distinguished French revolutionary officer. He was the son of an apothecary at Cassel, in the department du Nord, where he was born, November 5, 1771. Having entered the army at an early period of life, the bravery which he displayed, not untinged with cruelty, procured him unusually rapid promotion. He was placed at the head of a light troop, which received the complimentary designation of the Chasseurs of Mont Cassel. In 1793 he was employed in the army of the north, when he took Furnes, and blockaded Nieuport; but he was obliged to abandon that place with some loss on the approach of the allied army. In 1794 he served with Moreau at the taking of Menin, and the Fort of Schenk: he afterwards passed into the army of the Sambre and Meuse, and made the campaign of 1795 under Jourdan, and in 1796 he was employed in the army of Moreau, when he distinguished himself in the affairs at Abersbach, and the passage of the Lech. In the campaign of 1797, he commanded the advanced guard, with which he sustained the attack of the enemy, while the grand body of the army effected the passage of the Rhine, on which occasion his horse was killed under him. In 1799 he was appointed general of division, and he received the command of the left wing of the army of the Danube. He subsequently served under Brune, in Holland, and assisted in vanquishing the Anglo-Russian forces under the duke of York, at Alkmaar. The necessity of repose, in consequence of his wounds and fatigues, obliged him to retire from service for a short time, to his native town, but in April 1800, he returned to his military duties, and taking the command of a division of the army of the Rhine, he acquired new glory at the passage of that river between Stein and Schaffhausen, and on various other occasions. From Buonaparte, then first consul, he received several marks of distinction, and was named by him grand officer of the Legion of Honour. With the command of the Wurtemberg troops, in the campaign of 1809, against the Austrians, he added greatly to his military reputation. In 1811 General Vandamme was appointed president of the Electoral College of Hazebruk. He had no command in the expedition against Russia in 1812, having been disgraced and ordered to retire to Cassel, in consequence of disputes with Jerome Buonaparte. However, in February 1813 he was appointed to the command of a division of troops, and fought on various occasions with his accustomed bravery, but he was defeated at length with great loss and taken prisoner by General Kleist at Knollendorf. He was marched into the interior of Russia, and treated with much severity, but at length obtained his liberty. In 1813 he was again defeated by General

Kleist at the battle of Leipsic. In September 1814 he went to Paris, but he was ordered to quit that city within twenty-four hours, and he then retired to private life. When Buonaparte landed in France, after his escape from Elba, Vandamme offered his services to Louis XVIII, by whom they were not accepted. He then joined Napoleon, who made him a peer of France, and commandant of the 2nd division of the army. In June 1815 he commanded under Grouchy, whose conduct became the object of suspicion and censure, but Vandamme succeeded in the attack of Wavre after the battle of Fleurus, when his career was checked by the defeat of the French at Waterloo, and he effected his retreat with great ability. He subsequently retired with his troops behind the Loire, and at length submitted to the new government. The Ordinance of January 17th, 1816, obliged him to quit France, when he retired to Ghent, but he afterwards removed to his own estate at Cassel, where he died in 1830.—*Month. Mag.*

VAN DYK (HARRY STOE) a poetical and miscellaneous writer, born in London in 1798. His father was a native of Holland and his mother of the Cape of Good Hope. He received a classical education, and at an early age evinced a talent for poetry. His principal production was entitled "Theatrical Portraits," containing criticisms in verse on popular performers. In 1825 he translated, in conjunction with Mr Bowring, Specimens of the Dutch poets, printed under the title of "Batavian Anthology," for which each obtained a handsome medal from the king of Holland, through his ambassador in London, with a flattering letter acknowledging the receipt of the copies of the work, which had been forwarded to his majesty by the translators. Besides these productions Mr Van Dyk published "The Gondola," consisting of Tales; and Songs set to music. He died June 5th, 1828, near London.—*Month. Mag.*

VENN (HENRY) a clergyman, was born at Barnes in Surrey, in 1725, and was the son of the Rev. Richard Venn, the author of a volume of sermons and tracts. Henry was educated at Bristol, whence he went to Jesus college, Cambridge. He there took his master's degree, and afterwards became fellow of Queen's college. He was curate of Clapham, then vicar of Huddersfield in Yorkshire, and finally rector of Yelling in Huntingdonshire. He died at Clapham in 1797. He wrote "The complete Duty of Man," 8vo; "Sermons on various Subjects;" "Mistakes in Religion exposed."—His son, the Rev. JOHN VENN, was rector at Clapham. He was born in 1762, and died in 1813. Two volumes of his sermons have been published.—*Gent. Mag.*

VERNON (THOMAS) a lawyer, was born at Henbury-hall, Worcestershire, and was secretary to the duke of Monmouth. He had a seat in parliament after the Revolution. His "Reports" were printed in 2 vols, folio, by order of the court of chancery, 1726. A new edition afterwards appeared in 2 vols, 8vo.—*Bridgman's Legal Bibl.*

VISIN (—von) a Russian dramatist, who was born in 1745. He was a comic writer; and in his "Nedorosl"—The Minor, and "Brigandir," he presented his countrymen with two pieces, which displayed liveliness of dialogue and humour, spirited sketches of national character, and happy touches of satire, rendering them models of comic composition. His style as a prose writer, though not without faults, was yet superior to that of his contemporaries. Succeeding dramatists, neglecting his example, have usually imitated the French, in giving the dialogue of their comedies in rhyme. The absurdities and follies which Von Visin ridiculed with so much pleasantry have disappeared from Russian society; yet his dramas will continue to be read with delight, as valuable delineations of the manners of the age in which they were written. Besides his comedies he wrote tales; and he may be considered as one of the literary luminaries of the reign of Catherine II. He died in 1792.—*For. Rev. Edit.*

VIVARES (FRANCIS) a celebrated engraver, was born in 1709 at St John de Bruiel, a village of Rovergue. In 1727 he came to London, and was apprenticed to his uncle, who was a tailor, but taking a dislike to this occupation he delivered himself up to his inclination for engraving, and receiving the instructions of Amiconi he soon became eminent, particularly in landscape. He had three wives, and thirty-one children. He died in 1780.—*Biog. Univ.*

VOISIN (JOSEPH de) a native of Bordeaux, was originally a counsellor of the parliament, but entering the church he became almoner and preacher to the prince of Conti. He wrote "Défense du Traité de M. le Prince de Conti contre la Comédie et les Spectacles;" "A System of Jewish Theology;" "On the Divine Law;" "On the Jubilee;" "A French Translation of the Roman Missal," 4 vols; "Notes on Martin's Pugio Fidei."—*Moreri.*

VOPISCUS (FLAVIUS) a Latin historian, flourished in the fourth century, and was born at Syracuse. He wrote the lives of Tacitus, Florianus, Aurelian, &c.—*Fossius de Hist. Lat.*

VULPIUS (—) a German romance writer, who was librarian and keeper of the cabinet of medals to the duke of Saxe Weimar. The most celebrated of his works is a romance, translated into English, and published under the title of "The Life and Adventures of Rinaldo Rinaldini," 3 vols, 12mo. The reputation which he enjoyed, though brilliant, was transitory, for his Rinaldini, and the host of imitations which followed it, have long been almost forgotten. Among his latter productions is one entitled "Historical Curiosities," 1811—1825, 10 vols. He also edited the "Journal der Vorzeit; and he is said to have been employed for some years in writing a Dictionary of Northern Mythology. He died at Weimar in 1827, aged sixty-two.—*For. Rev.*

W A I

WAITHMAN (ROBERT) an alderman and member of parliament for the city of London, who distinguished himself by his patriotic speeches and writings. He was of humble parentage, and was born in 1765, at a village near Wrexham, in Denbighshire, North Wales. After having served an apprenticeship to his uncle, who was a respectable linen-draper at Bath, he obtained a situation as an assistant to a person engaged in the same kind of trade, at Reading, in Berkshire. Thence he removed to London, where he opened a shop in Fleet-street about 1787, and carried on business for many years as a mercer and draper with great success. Becoming a member of the common council of the metropolis for the ward of Farringdon Without, he devoted much of his attention to the politics of the day, and professing liberal principles, he became noted as a city orator; and the popularity which he thus acquired among certain classes of his fellow-citizens is said to have contributed much to his prosperity as a tradesman. He subsequently not only obtained the civic gown, but also filled the office of Lord Mayor; and he was four times elected by the citizens one of

W A D

their representatives in the house of Commons. His death took place at his residence in Russell-square, London, May 6, 1833. Mr. Waithman published a pamphlet entitled "War proved to be the real Cause of the present Scarcity, and of the enormous high Price of every Article of Consumption," 1800, 8vo; and "A Letter to the Governor of Christ's Hospital, being a Refutation of the Invectives of the Rev. Mr. Warren," 1805, 8vo. As a politician he showed himself on every occasion an advocate for the liberty of the subject, and for the reform of public abuses; and his friends and fellow-citizens have, since his decease, testified their sense of his merit as a useful magistrate and patriotic member of the legislature, by erecting an obelisk to his memory, near that raised in honour of Mr Wilkes.—*Biog. Dict. of Living Authors. New Month. Mag.*

WADEF (BLAINE HENRY DE CORTE, baron de) a French poet, who was probably a native of Liege, and was born in 1652. He commenced his literary career by a poem, entitled "Combat des Echases," in which he paid some compliments to Boileau, and thus secured the favour of that celebrated satirist. In 1714

Papers written during a Voyage to the Levant for the propagation of Vaccination, and during the Campaign in Egypt, under Sir Ralph Abercrombie and general Hutchinson, now Lord Donoughmore;" and also various essays in different periodical publications—*Biog. Dict. of Living Authors. Life of Dr. Walker, by John Epp, MD.*

WALKER (OBADIAH) a divine, was born at Worsborough, in Yorkshire, in 1616, and became a fellow of University college, Oxford, whence in 1648 he was ejected by the parliamentary visitors. He then went abroad, where it was supposed he turned Catholic. On his return he became head of his college; but on the accession of James II he publicly declared himself a Catholic, and caused mass to be performed. A printing-press was also established by him, whence issued many books against protestantism. He was sent to the Tower for a short time at the Revolution. He died in 1699, at the house of Dr Radcliffe, his pupil. He wrote "The Life of King Alfred, translated into Latin," folio; "A brief Account of Church Government;" "Instructions in Oratory;" "On Education;" "The Life and Death of Christ." 4to; "The Character of Martin Luther," 4to.—*Wood.*

WALKER (WILLIAM) the son of Adam Walker, born at Kendal in Westmoreland in 1766. At the early age of sixteen he exhibited in public as a lecturer on natural philosophy, and explained the eidouranion, or planetarium, invented by his father. He drew up an "Epitome of Astronomy, with the latest discoveries," 1798, 8vo. He died at Hayes in Middlesex, in 1816.—*Month. Mag.*

WALSH (EDWARD) an eminent physician, who was a native of Waterford, in Ireland, and was educated for the medical profession, having been sent to school in England, and subsequently proceeded to Edinburgh, where in due time he graduated as MD. He commenced his professional career as physician to a West India packet, in which capacity he visited, more than once, all the islands in the Gulf of Mexico, and at the period of one of his visits the yellow fever was raging like a plague in Jamaica. It was his custom to snatch his patients from the pestiferous atmosphere of the lower country and accompany them to the Blue Mountains, from whence many of them returned safe to England. He was now appointed surgeon of a regiment, on the reported death of its own medical officer, and he returned with it to England; but, to the surprise of every one, the gentleman suddenly appeared to claim his situation, which Dr Walsh was obliged to vacate, and was transferred to another in Ireland. There he witnessed the scenes which occurred during the rebellion; on the suppression of which his regiment was embarked for Holland. On his return to England he published an account of the ill-fated "Expedition," in 1 vol. 4to, with plates and maps. He next embarked on the expedition against Copenhagen, from which he returned with a shattered hand.

After this he visited Dantzic, and was in Russia when the emperor Paul was assassinated. He next proceeded with the 49th to Canada; and while there made some drawings of the Falls of Niagara. He was directed by government to introduce vaccination among the natives, with which view he proceeded into the interior, spreading that blessing among the people. He made some fine drawings of the Buffalo Creek, and other romantic spots on the lakes, and a few interesting sketches of the customs and manners of the Indians, many of which are similar to those of the Jews. Attached to the 6th dragoon guards, he was employed in Spain, and on his return he proceeded on the expedition to Walcheren, where he suffered severely from the intermittent fever, which, in some degree, affected his health periodically during the remainder of his life. He was now promoted to the staff, and went to the Continent as physician to the forces; and he was present in most of the actions which then took place, and finally in the battle of Waterloo, where he unfortunately had more duty than he could well perform. With this splendid victory terminated his medico-military career, and he retired from the service, with the provision due to a meritorious officer. After passing many quiet and happy years amongst associates who respected him for his worth, admired him for his talents, and loved him for his benevolence, he terminated a long life, in the bosom of his family, February 7, 1832. Besides his "Narrative of the Expedition to Holland," Dr. Walsh published "Bagatelles, or Poetical Sketches," 1793, 8vo; and he was a contributor to the *Medical and Physical Journal*, edited by Dr Bradley.—*Biog. Dict. of Living Authors. New Month. Mag.*

WALTER (JOHN GOTTLIEB) one of the most celebrated anatomists of the present age. He was born at Königsburg July 1, 1734; and having studied at Frankfurt on the Oder, he took the degree of doctor of medicine in 1757. He then went to Berlin to complete his education; and after having been professor at the anatomical theatre of the medico-surgical college, he in 1774 succeeded Meckel as first professor of anatomy and midwifery; and some years afterwards he also obtained the anatomical chair at the hospital of Charity. He greatly distinguished himself by his numerous anatomical discoveries, the result of the dissection of more than eight thousand subjects; and he formed a collection of preparations amounting to two thousand eight hundred and sixty-eight specimens, which was purchased by the king of Prussia for the anatomical museum of Berlin. Professor Walter died January 4, 1818. Among his principal works are a "Treatise on the Dried Bones of the Human Body," Berlin, 1763—1798, 8vo; "Observationes Anatomicae," 1775, folio; "A Manual of Myology," 8vo; "Tabulae Nervorum Thoracis et Abdominis," 1783, fol.; and "A Few Words concerning the Craniological Doctrine of Gall," 1805, 8vo.—WALTER

(FRED. AUGUSTUS) son of the preceding, was born at Berlin September 26, 1764. He was appointed in 1790 professor of anatomy and physiology at the college of medicine and surgery at Berlin; and in 1791 he was chosen a member of the academy there. In 1803 he obtained, in conjunction with his father, the direction of the anatomical museum; and in 1805 he was made first medical counsellor. His death took place December 18, 1826. He published "Annotationes Academicæ," 1786, 4to; "A Manual of Angiology," 1789, 8vo; "Researches concerning Diseases of the Kidneys and Bladder," 1800, 8vo; and "The Anatomical Museum of J. T. Walter," (his father,) 1796, 2 vols, 4to.—*Biog. Univ.*

WANSEY (HENRY) an antiquary and traveller, who was a native of Wiltshire, and died at Warminster in that county in 1827. He was an active member of the Bath and West of England Society, for the improvement of agriculture, manufactures, &c., on which subjects he wrote several tracts and essays. He travelled abroad in search of information; and of a visit to North America he published an account, entitled "An Excursion to the United States," 1796, 8vo. He was chosen a fellow of the Antiquarian Society; and he contributed two or three papers to the *Archæologia*. In the latter part of his life he was much engaged in collecting materials for Sir R. C. Hoare's History of the Hundred of Warminster. Mr Wansey, who was a Protestant dissenter, was highly respected in his private character.—*New Monthly Mag.*

WARBECK (PETER) or Perkin Warbeck, a mysterious personage who made his appearance in England in the reign of Henry VII, assuming the character and title of Richard duke of York, the younger son of Edward IV; supposed to have been murdered in the Tower, together with his brother Edward V, by order of Richard III. Margaret, duchess of Burgundy, acknowledged him as her nephew, and under her patronage he proceeded to claim the crown of England. Having been repelled in his attempts to land on the coasts of Kent, he went to Scotland, where James IV at first espoused his cause, but that prince having entered into a treaty with Henry VII, he dismissed the adventurer from his court. Perkin not long after landed in Cornwall, and being joined by some thousands of insurgents he laid siege to Exeter; but on the approach of the royal army he fled to Beaulieu abbey in Hampshire, which sanctuary he was induced to quit under a promise of pardon, and he was sent in custody to the Tower of London. Henry VII treated him as an impostor, and published an alleged confession of the captive youth, purporting that he was the son of one Osbeck or Warbeck, a converted Jew of Tournay, and that he had been prompted by the duchess of Burgundy to personate her nephew. He remained a prisoner in the Tower till 1499, when, having attempted to make his escape, he was hanged, drawn and quartered as a traitor. This individual has been the subject of much speculation among

historians, some of whom, as Horace Walpole, maintain the authenticity of his claim to the throne, while others assert that he was an illegitimate son of Edward IV.—*Lord Ferulam's Life of Henry VII. Andrew's Hist. of Great Britain.*

WARING (EDWARD) a mathematician, was born in 1744, at Fittes in Shropshire, and was educated at the free school of Shrewsbury. At the age of twenty-five he became Lucasian professor at Magdalen college, Cambridge. In 1767, by royal mandate, he took the degree of master of arts, and was elected fellow of his college. Seven years after he took the degree of doctor of physic, and next became fellow of the Royal Society, and member of the board of longitude. He wrote: "Miscellanea Analytica," on which Dr Powell published strictures; "Meditationes Analyticae;" "Meditationes Algebraicae;" and "An Essay on the Principles of Human Knowledge." He died in 1798.—*Hutton.*

WARNER (FERDINANDO) an English divine and doctor of laws, was born in 1703, and studied at Jesus college, Cambridge. He was rector of St Michael, Queenhithe, and of Barnes in Surrey. He died in 1768. His chief works are, "The History of Ireland," 4to; "An Ecclesiastical History of England," 2 vols, folio; "A System of Divinity," 5 vols, 12mo; "An Illustration of the Book of Common Prayer," folio; "The Life of Sir Thomas More," 8vo; "The History of Ireland," 4to; "History of the Rebellion and Civil War in Ireland."—His son, JOHN WARNER, was rector of Stanton in Wiltshire, and died in 1800. He was the author of a work on prosody, called "Metronariston," and a translation from the Spanish of the "History of Friar Gerund," 2 vols, 8vo.—*Nichols's Bowyer.*

WARNER (RICHARD) a botanist, was born in London in 1711, and studied at Wadham college, Oxford, and at Lincoln's-inn; but relinquishing the idea of the legal profession, he retired to his seat on Woodford-green in Essex, and devoted himself to natural history and literature. At his death, which took place in 1775, he bequeathed his library to Wadham college. He wrote "Plantæ Woodfordienses," 8vo, 1771; "A Translation of some of Plautus's Plays," 8vo; "A Letter to David Garrick, Esq. concerning a Glossary to Shakspeare," 8vo.—*Gen. Biog. Dict.*

WATERLOO (ANTHONY) an eminent Dutch painter, said to have been a native of Utrecht, in which city he chiefly resided. Landscape painting was the department of his art, which he cultivated so completely to the exclusion of every other, that many of his landscapes have no figures, because he was conscious of his inability to execute them properly. His scenes are agreeable representations of simple nature, and are distinguished for truth and accuracy. Waterloo lived in the early part of the seventeenth century.—*Pilk.*

WATSON (HENRY) an engineer and mathematician, was born about 1735, at Holbeach in Lincolnshire. He attracted so much notice by his contributions to the Ladies' Diary as to

WEB

procure his admission to the royal academy at Woolwich. He was a pupil of Simpson, who at his death gave him the care of his manuscripts, which he neither published nor gave to the family. In 1762, at the taking of the Havannah, he rendered himself so conspicuous as to receive the thanks of the king and of the commander-in-chief. He went out to India as chief engineer, and formed wet and dry docks at Bengal, for which he was never repaid. In 1786 he returned to England, and landing at Dover he there died and was buried. He published a translation of Euler's Theory of the Construction and Manœuvring of Ships.—*Gen. Biog. Dict.*

WATT (ROBERT) a medical writer and bibliographer, who was born in Ayrshire, in Scotland, in 1774. He adopted the profession of a surgeon; and after practising some time at Glasgow, he took out the diploma of MD, and became president of the faculty of physicians and surgeons of Glasgow. He also delivered lectures on the Theory and Practice of Medicine in that city, where he died March 12th, 1819. His death is said to have been occasioned by the exhaustion arising from his laborious exertions in compiling a work entitled "Bibliotheca Britannica, or a General Index of British and Foreign Literature," 4 vols, 4to; which was printed after his decease. Among his other works are "Cases of Diabetes, Consumption, &c." Paisley, 1808, 8vo; "A Catalogue of Medical Books for the Use of Students," Glasgow, 1812, 8vo; and "A Treatise on the History, Nature, and Treatment of Chincough," 1813, 8vo.—*Bibl. Britan.*

WEBB (JOHN) the nephew of Inigo Jones, was born in London in 1611, and studied architecture and mathematics under his uncle, who wished him to succeed him as surveyor of the works, but failed in his object. He died at Butleigh in Somersetshire in 1672. He wrote a curious work, entitled "An Historical Essay, endeavouring to prove that the Language of China is the Primitive Language," 8vo, 1668. He also published Inigo Jones's Treatise on Stonehenge, and a vindication of it against Dr Charlton.—*Wood.*

WEBER (HENRY WILLIAM) an ingenious writer on archæology, and editor of the legends of the middle ages. He was the son of H. W. Weber, a native of Neustadt in Westphalia, who was married to an English lady, and settled as a merchant at St Petersburg, where the son was born, September 22, 1783. His father dying when he was but three years old, his mother removed with her family into Saxony, and his son received his education at a German university. At the age of fourteen he quitted Germany for England, and adopting the profession of medicine, attended lectures one winter at Edinburgh, and then went to finish his studies at Jena, in Saxony. From that university he was, with the other students, expelled when the French army under Buonaparte took possession of the place. After residing for some time in the neighbourhood of Dessau, he returned to Edinburgh to obtain a

WEI

medical diploma, that he might be enabled to practise as a physician. He there formed an acquaintance with Mr (subsequently sir Walter) Scott, by whose advice he was induced to devote himself to literature as a profession. In 1803 he commenced his career by publishing a new edition of "The Battle of Flodden Field, a Poem of the Sixteenth Century;" which was followed by "Metrical Romances of the Thirteenth, Fourteenth, and Fifteenth Centuries, from Ancient Manuscripts, with an Introduction, Notes, and a Glossary," 3 vols; and he afterwards, in conjunction with Mr R. Jameson, produced a work entitled "Illustrations of Northern Antiquities, from the earliest Teutonic and Scandinavian Romances," 1814, 4to. In September 1816, Mr Weber, who then resided with his family at York, had the misfortune to lose his mother by death; and his health having been debilitated previously by a disease in the head, he became disordered in his intellects, in which melancholy state he remained till his decease, in the spring of the year 1818. Besides the works already noticed, Mr Weber published editions of the Plays of Ford, in 2 vols, 8vo; and those of Beaumont and Fletcher, in 14 vols; but his execution of these undertakings did not add to his reputation; and his errors as a dramatic commentator were most unmercifully exposed by Mr Gifford, who afterwards edited the productions of Ford and other early dramatists.—*Literary Chronicle.*

WEBSTER (JAMES) an ingenious traveller, who was a native of Scotland, and was educated at the university of St Andrew's, where he distinguished himself by his attachment to literature, and the extent of his acquirements. Having adopted the legal profession, he became a student at the Inner Temple, and after the usual term of probation, he went to the continent at the age of twenty-two, intending to pass a year in visiting different countries before he commenced his career as a barrister. He was however tempted to extend his travels far beyond his original design. Having passed through several parts of Europe, he proceeded to Egypt, and after reaching the cataracts and examining both banks of the Nile, he accompanied a fellow-traveller, Mr Newnham, an artist, to the deserts of Horeb and Sinai, where he was taken ill, and died soon after his return to Cairo, in 1828, at the age of twenty-six. The result of his observations and inquiries in the different countries which he had visited, appeared in a posthumous publication entitled "Travels through the Crimea, Turkey, and Egypt, in 1825—28, by the late J. Webster, Esq." 2 vols, 8vo.—*Ann. Biog.*

WEINBRENNER (FREDERICK) a distinguished German architect, who was counsellor and superior director of architecture at Carlsruhe, knight of several orders, and member of the academies of Berlin and Munich, and of several other societies. He was born November 9, 1766, at Carlsruhe, where his father was a carpenter, and was able to afford him

little assistance towards his early education. He however supplied the deficiency of instruction by his own industry, and devoted himself to the study of mathematics. He lost his father before he had attained his fifteenth year; but he was fortunate enough to gain the patronage of a person of distinction, and was enabled to attend lectures on mathematics and natural philosophy at the lyceum at Carlsruhe. In 1788 he travelled to Zurich, where he became acquainted with the celebrated Lavater, and having studied drawing, he improved his taste by exploring the grand and noble scenery of Switzerland. Having adopted architecture as a profession, he determined to visit Vienna, Dresden, and Berlin, that he might examine the works of art of various kinds with which those cities are adorned. At Vienna he became acquainted with Vincent Fischer, Professor of Architecture; and having acquired a knowledge of the works of the ancients, so far as it could be obtained from books, he was induced to travel into Italy, that he might behold those relics of antiquity which he had already been prepared to admire and to imitate. He remained a year at Rome, made designs of ancient edifices, and compared their remains with the notices of them in the works of Vitruvius and Livy; and he studied the productions of Palladio, Winckelmann, and Visconti, and inspected the treasures of the Vatican and other libraries. He next visited Naples and other parts of Italy, and returning to Rome, he gave lessons in designing to Prince Augustus, (now the Duke of Sussex,) Count Munster, and others; and after a residence of six years at Rome, he returned in 1797 to his native country. At Carlsruhe he founded an institution for the study of painting, modelling, poetry, the fine arts, and archaeology; and from this school issued many distinguished artists. He travelled to Paris, Hanover, Saxony, and the Netherlands, to examine works of art; and his professional reputation occasioned his being frequently consulted in the erection of private buildings and public works. Among those in which he was engaged may be mentioned the chancery, synagogue, theatre, churches, palaces, and other edifices, at Carlsruhe; the hall of antiquities, the baths, and the theatre, at Leipsic; a country house for General Miloradovitch, in the Crimea; and several prisons in the kingdom of Hanover besides many others. He also erected some monuments, as that of General Dessaix, at Strasburg; and he gave designs for others, which have not been executed. His death took place March 12, 1826. Weinbrenner published "A Treatise on the Order of Colonades," Stuttgart, 1809; "On Theatres," 1809; "The Art of Drawing," 1811; "Ideas on a German National Monument for the Field of Battle near Leipsic," 1814; "The Doctrine of Perspective;" "On Form and Beauty," 1819; "On Architectonic Decorations;" "A Proposal for a Monument for the Field of Battle at Belle Alliance, (Waterloo)," 1820. He like-

wise made designs for the restoration of some remarkable ancient buildings, as the Temple of Ephesus, and the Bath of Hippias, at Athens.—*New German Biography.*

WELLS (WILLIAM CHARLES) a physician, was born at Charlestown, in South Carolina, of Scotch parents, in 1753. He went to Scotland to receive his education, and on his return to America he served his apprenticeship to the medical profession. He quitted Carolina at the commencement of the war, and going to Holland he became surgeon to a regiment. In 1780 he graduated, and returned to his country, where he was conspicuous for his loyalty. He came to London, and in 1788 was made a licentiate of the Royal College, and he entered very warmly into the dispute on the right of licentiates to be fellows. He was afterwards made a member of the Royal Society. He died in 1817. Dr Wells was the author of several valuable papers in the Philosophical Transactions; for those "On Dew" he received the gold and silver medals. He also wrote an "Essay upon Single Vision with Two Eyes;" and a defence of it, in answer to Dr Darwin, &c.—*Gent. Mag.*

WERNER (FREDERICK LUDWIG ZACHARIAS) a German dramatist, distinguished for his talents and for the eccentricity of his opinions. He was born at Königsberg, in Prussia, November 18, 1768. His father was Professor of History and Rhetoric in the University in that city, and also dramatic censor, which circumstance afforded the son ready access to the theatre, and he thus acquired a taste for the drama. He studied jurisprudence in the University of Königsberg, and also philosophy, under Kant; and in 1793 he obtained the subordinate employment of exchequer-secretary, which he held successively in different stations, and at length at Warsaw, where he remained several years, and became acquainted with Hoffmann, the romance writer, Hitzig, and other literary men. In 1801 he published at Berlin "Die Sohne des Thals"—The Sons of the Valley; a Dramatic Poem. Part I. entitled "The Templars in Cyprus;" and in 1802, Part II. "The Brethren of the Cross." In 1804, through the death of his mother he became possessed of a small but competent fortune; and he subsequently removed to Berlin. On the invasion of Prussia by the French in 1807, he lost his office; and the remaining part of his life was spent in an unsettled manner, visiting many different places in Germany, Switzerland, France, and Italy; and occupied with several romantic projects. At one period he purposed establishing a new religion, having been bred a Lutheran; but in April, 1811, he embraced the Catholic faith. He then engaged in the study of theology, and in 1814 he was ordained a priest; but though he preached at Vienna and elsewhere, he never undertook any spiritual cure. In 1822 his health became seriously disordered, and he died in the beginning of the following year. Besides the plays above mentioned, he wrote "The Cross on the Baltic," 1806;

"Martin Luther, or the Consecration of Strength," 1807; "Attila," 1808; "The Mother of the Maccabees," 1820; and other tragedies; and also religious pieces, in prose and verse.—*Sketch of the Life of F. L. Z. Werner, by Hitzig.—For. Rev.*

WERNER (JOHN) a geographer and astronomer, who acquired great reputation by his writings. He died in 1504.—*Hoffman Ler. Hist. Moreri. Dict. Hist.*

WERNER (JOSEPH) an eminent painter, who was a native of Berne, in Switzerland. He was born in 1637, and was the disciple of Matthew Merian, at Frankfort. He afterwards is studied in Italy with such industry and success that his reputation extended throughout Europe, and he was invited to Versailles by Louis XIV. He subsequently settled at Augsburg, where he was employed by the duchess of Bavaria. At length he removed to Berne, at which place he died in 1710. Werner excelled especially in miniature, and his pieces are highly finished and greatly esteemed. When the elector of Brandenburg, Frederick I, founded an academy of painting at Berlin, Werner was nominated professor, with a handsome salary; but he soon lost the appointment, in consequence of the disgrace of the minister Dankelmann, by whom he was patronised.—*Biog. Univ.*

WERNER (PAUL DE) a famous Prussian general, born at Raab in Hungary, December 11th, 1707. At the age of sixteen he became an ensign in the regiment of Nadasti, and in 1735 he attained the rank of captain. After continuing twenty-nine years in the Austrian service, and greatly distinguishing himself at the battles of Rocoux, Laufeldt, and on various other occasions, he became disgusted at not receiving the promotion which he thought due to his merit, and resolved to seek it elsewhere. In 1750 he accordingly entered into the Prussian army, and was speedily made lieutenant-colonel of hussars; and in 1756 he was appointed commander of the regiment. He displayed great bravery at the head of his troops at the battles of Prague, Kollin, Breslau, and Leuthen; and in September 1758, Frederick appointed him major-general, and conferred on him the Order of Merit. In 1759 he drove general de Ville out of Silesia; and the same year he performed his greatest exploit, raising the siege of Colberg. A medal was struck in commemoration of this achievement; and the poet Ramler, who was a native of Colberg, in one of his finest odes celebrated the triumph of Werner. In 1761 he was made lieutenant-general; and being subsequently employed against the Russians, who had invaded Prussia, he was surprised, made a prisoner, and conducted to Königsberg, where he continued till 1762. On the accession of the czar, Peter III, he was sent to Petersburg, where he was loaded with honours and presents. The most advantageous offers were made to induce him to enter into the Russian service; but he rejected them, and returned to Prussia. The king gave him the command of an army, with which he penetrated into Moravia. Returning

to Silesia, he attacked Marshal Daun, and obliged him to evacuate Schweidnitz. This was the last action of importance before the war was concluded. Werner afterwards served in the war concerning the succession of Bavaria. He died in retirement, at his estate in Silesia, January 25th, 1785.—*Biog. Univ.*

WESTON (STEPHEN) a learned classical scholar, and cultivator of general literature. He was born in 1747, at Exeter, where his father was registrar of the diocese. After having been educated at Eton school, and Exeter College, Oxford, where he obtained a fellowship, he accompanied to the continent Sir Charles Warwick Bampfylde, as travelling tutor. In 1777 he obtained the living of Manhead, Devon, through the friendship of the Earl of Lisburne. In 1784 he married Miss Tierney, after whose death, in 1790, he resigned his ecclesiastical preferment. His first publication was in 1781, and it consists of criticisms on the Greek Poets, entitled "Hermesianax." Among the very numerous subsequent productions of his pen may be mentioned "An Attempt to translate and explain the difficult passages in the Story of Deborah, with the assistance of Kennicott's Collations, De Rossi's Versions, and Critical Conjectures," 1788; "Letters from Paris," 1792—94, 2 vols. 8vo; "A Specimen of the Conformity of the European Languages, particularly the English, with the Oriental Languages, the Persian, in the order of the Alphabet, with Notes and Authorities," 1802, 8vo, improved edit. 1803; "The Praise of Paris, or a Sketch of the French Capital, in Extracts of Letters from France, in the Summer of 1802," 8vo; "A Slight Sketch of Paris, in its improved state, since 1802," 1814, 8vo; "Arabic Aphorisms, with Persian Comments," 1803; "Fragments of Oriental Literature, with an Outline of a Painting on a curious China Vase," 1807; "Ly Tang, an Imperial Poem, in Chinese, by Kien Lung, with a Translation and Notes," 1809; "Specimen of a Chinese Dictionary," 1812; besides various other translations from the Chinese and Persian, in prose and poetry, Sermons, Tales, and works relative to philology and divinity. He was chosen FRS. in 1792, and FSA in 1794; and he furnished many contributions to the *Archæologia*, and the *Gentleman's Magazine*. His death took place in London, January 8, 1830.—*Ann. Reg.*

WHATELEY (THOMAS) an eminent surgeon, who died at Isleworth, Middlesex, November 16, 1821. He distinguished himself by his skill in the treatment of diseases of the urethra and bladder; and he was the author of "Practical Observations on the Cure of Wounds and Ulcers of the Legs, without Rest," 1799, 8vo; "An improved Method of Treating Strictures of the Urethra," 1801, 8vo; "Observations on Necrosis of the Tibia," 1815, 8vo, besides other works.—*Genl. Mag.*

WHITBY (DANIEL) a learned divine, was born at Rushden, in Northamptonshire, in 1638, and died in 1726. In 1664 he was

elected fellow of Trinity college, Oxford. He distinguished himself by his zeal in attacking the Catholic writers, for which he was rewarded by bishop Ward with a prebend in Salisbury cathedral, and the precentorship and rectory of St Edmund's in that city. He took his doctor's degree, but soon after he incurred censure for a treatise entitled "The Protestant Reconciler." He continued his literary labours, and produced a "Paraphrase and Commentary on the New Testament," 2 vols, folio; and a treatise on the "Five Points" controverted between the Arminians and Calvinists, 8vo, 1710. Towards the close of his life a complete revolution took place in his literary opinions, and he became an Arian, and had a dispute on the subject with Dr Waterland. He left a book behind him called "The Last Thoughts of Dr. Whitley."—*Biog. Brit.*

WHITE (JEREMY) a nonconformist divine, and fellow of Trinity college, Cambridge, was chaplain to Cromwell. He wrote a book on "The Restoration of all Things," in which he supported Origen's principle of universal redemption. He died in 1707, aged seventy-eight. A curious anecdote is related of this person. He paid his addresses secretly to one of Cromwell's daughters: as he was one day urging his suit upon his knees, the Protector entered the room suddenly, and sternly demanded why he was in that posture. Poor Jeremy confounded, stammered out that he was merely soliciting her ladyship's interest with her waiting woman, to whom he was making his suit. "Say you so? I'll settle the business directly," was Oliver's reply; and sending for Dr Goodwin the marriage was performed on the spot.—*Calamy*.

WHITE (SIR THOMAS) a native of Reading, where he was born in 1492. He was apprenticed to a tradesman, and afterwards went himself into business, in which he had great success. During Wyatt's rebellion in 1553 he was lord mayor, and was knighted for the peace which he preserved on that occasion. He was the founder of St John's college, Oxford, for which he obtained a patent in 1557. He died in 1566.—*Coates's Reading*.

WHITE (JAMES) an ingenious writer, who was a native of Ireland, and was educated at the university of Dublin. He came to England, and in 1787 he published a translation of the orations of Cicero against Verres, with notes, 4to, which was followed by a pamphlet against the slave trade. He was also the author of "Conway Castle, and other Poems," 1789, 4to; "Earl Strongbow, or the History of Richard de Clare and the beautiful Gerald," a romance, 1789, 2 vols, 12mo; "The Adventures of John of Gaunt, Duke of Lancaster," 1790, 3 vols, 12mo; "The Adventures of Richard Cœur de Lion, with the Death of Lord Falkland, a poem, 1791, 3 vols, 12mo; and a translation of the speeches of Mirabeau before the National Assembly, with a sketch of his Life, 1792, 2 vols, 8vo. In the latter part of his life he became deranged; and after suffering extreme misery and distress, he died at an inn a few miles from

Bath, March 30, 1799.—*Gent. Mag. Biog. Univ.*

WHITEHEAD (DAVID) a learned divine, was a native of Tuderly in Hampshire, and was educated at Oxford. During the reign of queen Mary he went abroad, and became pastor to the English exiles at Frankfort. He returned on the accession of Elizabeth, and distinguished himself in a disputation with the popish bishops, which so pleased the queen that she would have given him high preferment but he declined it, saying he could preach without it. He died in 1571. He wrote "A Discourse of the Troubles begun at Frankfort," 4to; and "Lectures on St Paul's Epistles." He was a great favourite with the queen, who one day at court said to him, "Whitehead, I like thee the better because thou livest unmarried;" to which he replied, "In truth, madam, I like you the worse for the same cause."—*Hood*.

WIERUS (JOHN) a physician, was born at Grave, in the duchy of Brabant, in 1515. He was the disciple of Cornelius Agrippa, and physician to the duke of Cleves. He died in 1585. In a treatise, "De Præstigiis et Incantationibus," he was of opinion that persons accused of sorcery were hypochondriacs.—*Eloy Dict. Hist.*

WIGAND (JOHN) a reformer, was born at Mansfield in Saxony, in 1523, and studied at Wittenberg. He was the first person ordained in the Protestant form. He was made superintendent of Magdeburg, and in 1560 became professor of divinity at Jena, whence he went to Weimar, and thence to Königsberg, where he was professor and bishop. He was concerned in the celebrated "Centuries," in opposition to Baronius. He wrote many theological works, and a botanical treatise, "De Succino Borussico, de Aloe, de Herbis Borussicis et de Sale." He died in 1587.—*Metch. Adam*.

WILBERFORCE (WILLIAM) a political and theological writer, celebrated as a member of the British legislature, on account of his endeavours to obtain the abolition of slavery and the slave trade. He was descended from an ancient family, originally settled at Wilberfoss, near Pocklington, in the county of York, whence was derived the family name; and the manor, which had been possessed by his ancestors, was alienated by William Wilberfoss, Esq, who sold it in 1719. The ancient orthography of this local designation was altered to Wilberforce by the members of a branch of the family, which flourished in the city of York in the seventeenth century. The subject of this article was the son of Robert Wilberforce, of Kingston upon Hull; and his grandfather had twice held the office of mayor of that borough. He was born August 24, 1759, at Hull; and his father dying while he was very young, the care of his education devolved on his mother, who sent him to the free school of Pocklington, and afterwards placed him under the tuition of the Rev Joseph Milner, of Hull, an evangelical clergyman, distinguished by his writings, and to whom pro-

bably his pupil owed those peculiar religious opinions, which he repeatedly advocated from the press. About 1775 he entered as a student at St John's college, Cambridge, where he took the degree of Bachelor of Arts in 1781, and that of Master of Arts in 1798. At college he contracted an intimacy with William Pitt, and with the Rev Isaac Milner, the younger brother of Joseph Milner, the former of whom became Dean of Carlisle. In conjunction with his college friends he made a tour on the continent. Mr Wilberforce having inherited property from his uncle, W. Wilberforce, Esq. of Wimbleton, in Surrey, who died in 1777, he was on his coming of age just before the general election in 1780, returned MP. for his native place, the borough of Kingston upon Hull. In 1784 he was again chosen as their representative by his fellow-townsmen, and was also returned as one of the members for the county of York, when he elected to sit for the latter. In his parliamentary career he gained distinction chiefly by becoming a zealous advocate for the abolition of the slave-trade; and it appears that he was originally induced to embark in the cause of humanity by the representations of Mr Thomas Clarkson. At his first interview with that gentleman, he was disposed to question the correctness of some of the allegations contained in Mr Clarkson's "Essay on Slavery;" but after some investigation of the subject, he became satisfied of their truth; and at a dinner given by Bennet Langton, Esq. he formally consented to become a member of a society which had been established with the view to put an end to the practice of making human beings articles of commerce. He consequently, in 1787, brought forward a motion relating to the abolition of the slave trade, which led to the presentation of petitions in favour of that measure from every part of the kingdom. Illness subsequently prevented Mr Wilberforce from proceeding in his undertaking, and therefore the next year Mr Pitt, in the name of his absent friend, submitted some resolutions to the house of Commons. The business was however postponed to the following session, when the propositions were supported by the eloquence of Wilberforce, Pitt, Fox, and Burke; and the question was carried without a division. But the object he had at heart had to contend with powerful and interested opposition; and in 1791, when he moved for leave to bring in a bill to prevent the further importation of African Negroes into the British colonies, he was defeated, and the motion was negatived by a majority of 75. In 1792 he made another attempt, supported by the rival statesmen Pitt and Fox, and he so far succeeded as to induce the House to agree to a resolution for the gradual abolition of the slave trade, which was carried with only 85 dissenting voices. It was not however till 1807, during the short administration that followed on the death of Mr Fox, that Mr Wilberforce had the gratification to see his labours effectual to the extent of the abolition of the trade in slaves by subjects of Great Britain. Mr

Wilberforce was usually to be found among the parliamentary supporters of government, displaying however thorough consistency of conduct, and firm adherence to the principles he professed. In February, 1783, he advocated the treaty of peace concluded with the United States and their allies, during the short-lived administration, when Lord Shelburne (afterwards Marquis of Lansdowne) presided over the Treasury, and Mr Pitt was Chancellor of the Exchequer. On this occasion he seconded the motion for an address of thanks to his Majesty, observing that at that moment tranquillity was essentially requisite for the country, after "a mad and calamitous war." On the motion for the impeachment of Warren Hastings, in 1786, Mr Wilberforce recommended the administration to exercise much circumspection and care before they allowed any papers to be produced, the publication of which might be prejudicial to the state; and he also animadverted on the violence of zeal displayed by some members of the house of Commons on this occasion. In 1790 he declared in favour of the conduct of ministers, relative to the convention with Spain; on the discussion of the war in India against Tippoo Saib, he asserted that that prince had been the original aggressor. He at first approved of the war with France, which followed the Revolution in that country; but he was likewise one of those who considered the continuance of the contest as impolitic after the establishment of a settled government there, and he consequently supported those who negotiated the treaty of Amiens. In 1804, he agreed to the proposition for inquiry relative to the defence of the country against foreign invasion; and in 1805, he displayed his independence in his conduct with regard to the accusation against lord Melville, having on the 11th of June made a motion for an impeachment of that nobleman, for high crimes and misdemeanours, which was lost, and an amendment by Mr Bond was carried, directing the commencement of a criminal prosecution by the attorney general. Mr Wilberforce was re-chosen without opposition for the county of York, at the elections in 1790, 1796, 1802, and 1806; but at that which took place in 1807 he had to encounter a powerful competition from the two great families of Fitzwilliam and Lascelles, each of whom are said to have expended in the contest more than one hundred thousand pounds. The old member, however, was supported by a public subscription raised throughout the county, and he was again successful. The numbers of the voters at the close of this almost unparalleled contest, which lasted fifteen days, were as follows:

William Wilberforce, Esq. .	11,808
Lord Viscount Milton	10,990
Hon. Henry Lascelles	10,177

These formed the largest amount of voters which had ever been polled at a county election. At this period, Mr Wilberforce published two pamphlets addressed to the freeholders of Yorkshire: one on the Abolition of the Slave

Trade, and the other on the circumstances of the election, in consequence of his having been accused, towards its termination, of entering into a coalition with the party of the rival candidate, Mr Lascelles. In 1812, Mr Wilberforce retired from the representation of Yorkshire, not being willing again to encounter the expense of another contest, the last, notwithstanding the subscription, having caused a considerable reduction of his finances. He was then elected member for the borough of Bramber, in Sussex, for which he likewise had a seat in the two subsequent parliaments, until, in 1825, he finally relinquished his senatorial honours, by accepting the stewardship of the Chiltern Hundreds. He had been then in parliament forty-five years; and during a part of that period his influence in the house was superior to that of any other individual not possessed of official power. It has been stated, that no less than forty members of the house of Commons were influenced by his speech on the inquiry concerning the affair of lord Melville, when he pronounced the conduct of that statesman to be a proper subject of censure, while he admitted the ability with which he had headed the Board of Control over the government of India. Mr Wilberforce is said to have possessed in perfection two of the most essential qualifications of a popular orator—the choicest and most expressive purity of language, and the finest modulation of a sweet and powerful voice. The copiousness of diction which a classical education had conferred, and ardent zeal arising from his religious sentiments and natural temper, contributed further to his excellence as a public speaker. The exclusive and limited system of opinions he had adopted, not merely with sincerity, but with passionate enthusiasm, rendered him earnest, vehement, and affecting, where a philosopher would be frigid and indifferent. Such is the extreme superiority of persuasive power which the partisan or the bigot will often manifest over the man of enlarged views and liberal opinions. That he was often unconsciously led into exaggeration and induced unwittingly to exceed the bounds of truth, that he sometimes allowed his feelings to predominate over his reason, and was hence led to ascribe unworthy motives to those whose honour was as spotless as his own, cannot be denied; but, on the other hand, he devoted all his energies to the cause of humanity, and to the advancement of those objects which in his opinion were likely to conduce to the moral improvement of mankind. In the course of his parliamentary career, he supported Catholic Emancipation and Parliamentary Reform; reprobated lotteries as injurious to the morals of society; asserted that the employment of boys of a tender age in the sweeping of chimneys was most intolerable cruelty; and shortly after the duel between Pitt and Tierney, he attempted, but in vain, to procure a legislative enactment against the practice of duelling. He has been described by the present lord chancellor, lord Brougham, as the “venerable patriarch

of the cause of the slaves; whose days were to be numbered by acts of benevolence and piety; whose whole life had been devoted to the highest interests of religion and charity.” In 1797, Mr Wilberforce published “An Apology for the Christian Sabbath,” 8vo; and likewise a more extensive work, entitled “A Practical View of the prevailing religious system of Professed Christians, in the Higher and Middle Classes of this Country, contrasted with Real Christianity,” 8vo; which, within a year, passed through three large editions, and has been repeatedly reprinted since. He advocated in this production theological sentiments highly Calvinistic, and tinged with enthusiasm; and this expression of his opinions provoked the animadversions of the Rev. Gilbert Wakefield, in a letter addressed to the author; of the Rev. Thomas Belsham, in a “Review” of the work; and of Dr Thomas Cogan, in “Letters to W. Wilberforce, Esq. on the Doctrine of Hereditary Depravity; by a Layman:” besides which he encountered some other opponents. In 1823 he published an “Appeal to the Religion, Justice, and Humanity of the British Empire, in behalf of the Negro Slaves in the West Indies.” He was also the writer of an introductory essay to Dr Witherspoon’s Treatises on Justification and Regeneration, in a series of Christian Authors, published at Glasgow; and he furnished many communications for the periodical work called the “Christian Observer.” Mr Wilberforce was married at Waleot, near Bath, May 30, 1797, to Barbara, the eldest daughter of Isaac Spooner, Esq. of Elmdon House, Warwickshire, who was also a merchant at Liverpool; by whom he had four sons and two daughters. He possessed an estate at Markington, in Yorkshire, but for many years he resided chiefly at a villa called Broomfield, near Clapham, in Surrey. In the latter part of his life he removed to Highwood Hill, near Hendon, Middlesex; and for a year or two before his death his time was principally passed at the house of one of his sons, the Rev. Robert Wilberforce, rector of East Farleigh, near Maidstone; or with another son, the Rev. Samuel Wilberforce, rector of Brixton, in the isle of Wight. He died at Cadogan-place, Chelsea, July 29, 1833. Agreeably to his own direction, it was the intention of his family that he should be interred at Stoke Newington, in the vault belonging to the family of his brother-in-law, James Stephen, Esq.; but in consequence of a public requisition from many noble and distinguished persons, his funeral took place at Westminster Abbey; his grave being near those of Pitt and Canning. On the 22d of August, a public meeting was held, at which the lord chancellor presided, at which, among other resolutions, it was determined, that a subscription should be opened for the purpose of doing honour to the memory of Mr Wilberforce, by the erection of a monument, and such other methods as may be calculated to promote, in connexion with the name of

Wilberforce, the glory of God, and the good of mankind. Mr Wilberforce was in person below the middle size, of spare habit, and of a somewhat weakly constitution; and his extraordinary oratorical efforts were productive of exhaustion and subsequent suffering. Had he not been equally benevolent in his private feelings as in his public actions, he might have become a wit and a satirist. But his great characteristic was philanthropy, founded on religious sentiment. Besides the works already mentioned, he published "A Speech in the House of Commons, on the Abolition of the Slave Trade," 1789, 8vo, and the "Substance of his Speeches on the Bill for promoting the Religious Instruction of the Natives of British India," 1813, 8vo.—*Gent. Mag. Biog. Dict. of Living Authors. Wilson's Biog. Index to the House of Commons*, 1808.

WILDBORE (CHARLES) a native of Nottinghamshire, received his education at a charity school, but by his own perseverance and application he became sufficiently learned to enter into orders. He was rector of Sulney, in Nottinghamshire, where he died in 1802. He was a profound mathematician, and was a contributor to the Ladies' Diary, Hutton's Miscellanea Mathematica, and Martin's Magazine. He also edited the Gentlemen's Diary, and corrected the sheets of the Philosophical Transactions.—*Gent. Mag.*

WILFORD (FRANCIS) a distinguished Orientalist, born of an ancient family in Hanover. After finishing his studies, he entered into the army, and with the rank of lieutenant he accompanied the Hanoverian troops sent by the British government to the East Indies in 1781. On the conclusion of the peace of Mangalore, in 1784, captain Wilford engaged in the study of Hindoo antiquities, and the Sanscrit language. He became one of the first members of the Asiatic Society of Calcutta, in whose Transactions, the Asiatic Researches, he published many memoirs on the history and archæology of Hindostan, the last of which, "On the Ancient Geography of India," appeared in 1822, a short time before the death of the learned author.—*Biog. Univ.*

WILKS (MARK) a farmer in the county of Norfolk, who became a methodist preacher, and obtained considerable notoriety among the evangelical dissenters. He published "The Origin and Stability of the French Revolution, a Sermon," 1791, 8vo; "Athaliah, or the Tocsin sounded by the Modern Alarmists; two Sermons preached for the benefit of the Defendants in the last Trials for High Treason," (Hardy, Horne Tooke, &c.) 1795, 8vo; and "A History of the Persecution of the Protestants in the South of France," 1821, 8vo; "Memoirs of the Rev. Mark Wilks of Norwich," were published by Miss Sarah Wilks, 1821, 12mo.—*Biog. Univ.*

WILDENOW (CHARLES LOUIS) a celebrated botanist, born at Berlin in 1765. He was the son of an apothecary, and after studying pharmacy under his father, he was sent to the university of Halle, and then to Langen-

salza, where Wiegleb had a laboratory of pharmaceutical chemistry. Willdenow then returned to Berlin, where in 1798 he obtained the chair of natural history at the royal college of medicine and surgery. In 1801 he was appointed professor of botany to the academy of Berlin, of which he had been admitted a member in 1794. He at length obtained the direction of the botanic garden at Berlin, which received vast additions and improvements under his management. He formed a zoological cabinet, which he presented to the museum of Berlin. In 1804 he travelled through Austria and Upper Italy; and seven years after he was invited to Paris by Humboldt, to classify and describe the multitude of new plants brought by that traveller from America. Willdenow died not long after his return to Berlin, July 10, 1812. He was an associate of twenty-four learned societies; and the king bestowed on him the order of the black eagle. Among his principal works are, "Prodromus Floræ Berolinensis," 1787; "Historia Amaranthorum," Zurich, 1790, folio; "Éléments de Botanique," 1792, which has been translated into several languages; "Arboriculture Bernoise spontanée," 1796; "Species Plantarum exhibentes Plantas rite cognitatas ad genera relatas cum differentiis specificis, nominibus trivialibus, synonymis, selectis locis natalibus, secundum systema sexuale digestas," Berlin, 1797—1810, 5 vols, in nine parts; "Guide pour étudier soi-même la Botanique," 1804; and "Hortus Berolinensis," of which only the first volume has been published. Willdenow's great work, the Species Plantarum, was left incomplete, as he did not live to finish the history of the cryptogamic plants. A continuation has been promised by professor Linck, of Berlin.—*Biog. Univ.*

WILLETT (RALPH) a writer on archæology, who died January 13, 1795. He was a fellow of the Royal Society, and also of the Society of Antiquaries; and he contributed to the Archæologia papers "On the Naval Architecture of Great Britain," and "On the Origin of Printing." At his seat at Merly, in Dorsetshire, Mr Willett collected a valuable library, of which he published a "Description," in English and French, London, 1785, folio; and he was also the author of "A Memoir on the Origin of Printing," 1820, 8vo. His library was sold by auction after his death, when a catalogue was printed in 8vo.—*Biog. Univ. Watt's Bibliot. Brit.*

WILLIAMS (JOHN) a literary adventurer, who published a variety of pieces in prose and verse, under the assumed name of Anthony Pasquin. Among his productions are, "The Royal Academicians, a Farce," 1786, 8vo; "A Treatise on the Game of Cribbage," 1791, 8vo; "The Life of the Earl of Barrymore, including a History of the Wargrave Theatricals, and Original Anecdotes of Eminent Persons," 1793, 8vo; "A Critical Guide to the Exhibition of the Royal Academy for 1796," 8vo; "History of the Professors of Painting in Ireland," 1796, 8vo; "The New Brighton Guide, involving a complete, authentic, and

honourable Solution of the recent Mysteries of Carlton House," 8vo; "The Pin-Basket to the Children of Thespis, a Satire, with Notes," 1797, 4to; and a monthly journal, called "The Dramatic Censor," 1811, 8vo.—*Reuss.*

WILLIAMS (HELEN MARIA) a distinguished writer on history and general literature, born in the north of England, in 1762. She came to London at the age of eighteen, and was introduced to the literary world by Dr Andrew Kippis. The first production of her pen appears to have been a legendary tale in verse, entitled "Edwin and Eltruda," 1782, 4to; and this was followed by "An Ode on Peace," 1783, 4to; "Peru," a poem, 1784, 4to; and "A Collection of Miscellaneous Poems," 1786, 2 vols, 8vo. In 1788 she published a poem "On the Slave Trade;" and the same year she visited France, where she formed many literary and political connexions. In 1790 she went again to France, and settled at Paris; and soon after appeared her "Letters written from France, in the Summer of 1790, to a Friend in England; containing various Anecdotes relative to the French Revolution, and Memoirs of Mons. and Mad. du F—;" of which work she published a continuation in 1792. The object of these, and of some contemporary productions of this lady, was to recommend herself to the patronage of the Brissotines; and consequently on their fall under the tyranny of Robespierre she incurred great danger, and being arrested, was for some time a prisoner in the Temple at Paris. On obtaining her freedom, she renewed her application to literary pursuits. Besides many works of minor importance, she engaged in an English translation of the Personal Narrative of the Travels of Humboldt and Bonpland, in America, 1814—1821, 6 vols. 8vo. Miss Williams died at Paris, in December, 1827. Besides the works already mentioned, she wrote "Julia," a novel, 2 vols; "A Narrative of Events in France in 1815;" "Letters on the Events which passed in France since the Restoration in 1815," and other pieces; and she was at one time a contributor to the *New Annual Register*.—*Gent. Mag. Month. Mag.*

WILLIAMS (ROGER) surnamed the Father of the colony of Providence, was born in Wales, in 1599. He became a clergyman, and adopting the principles of the puritans, he emigrated to America, where he founded the town of Providence on Rhode Island, granting to all settlers perfect liberty of conscience. He distinguished himself by his liberality of sentiment, and his zeal for the conversion of the Indians to Christianity. He died in 1683. Roger Williams was the author of a treatise against persecution; a tract against the quakers; and other works on religious controversy: besides "A Key to the American Language, or a Manual of the Language of the Indians of New England," 1645, 8vo, of which there are several editions.—*Biog. Univ.*

WILLIAMS (GRIFFITH) a learned prelate, was born at Caernarvon in 1559, and was educated at Jesus college, Cambridge. On

taking orders he became lecturer at St Peter's, Cheapside, but so offended the puritans as to procure his suspension. He obtained a living in Wales, became chaplain to the king, prebendary of Westminster, and dean of Bangor. He was created bishop of Ossory in 1641, but on the rebellion he fled to England. He was very loyal, and consequently suffered much; but he recovered his see at the Restoration. He died at Kilkenny. His works are, "The Right Way to the Best Religion," folio; "Seven Golden Candlesticks holding the Seven Lights of Christian Religion," 4to; "The true Church showed to all Men," folio; "The great Antichrist revealed," folio; "The Persecution and Oppression of John Ball and Griffith Williams, Bishops of Ossory," 4to.—*Wood.*

WILLIAMS, LL.D. (JOHN) a native of Lampeter, in Cardiganshire, who became minister of a dissenting congregation at Sydenham, in Kent. He died at Islington, April 15, 1798, at the age of seventy-two. Dr Williams published "Thoughts on Subscription to the Thirty-nine Articles;" "An Enquiry into the Truth of the Tradition concerning the Discovery of America by Prince Madog, about the year 1170," 8vo; "Remarks on Dr W. Bell's Arguments for the Authenticity of the Two First Chapters of Matthew and Luke," 1796, 8vo. He is also said to have been the author of a "Concordance of the Greek Testament," 1767, 4to.—*Gent. Mag. Watt's Bib. Brit.*

WILSON (Sir THOMAS) an English writer, and native of Lincolnshire, studied at Eton, and at King's college, Cambridge. He became tutor to the sons of the duke of Suffolk. During the reign of Mary he lived on the continent, but becoming an object of suspicion and displeasure he was imprisoned at Rome by the inquisition, but the prison being accidentally set on fire, it was forced open to prevent the prisoners from being burnt, and Sir Thomas thus escaped. He was in high favour with queen Elizabeth, who made him master of requests, and of St Katharine's hospital, and dean of Durham. He died in 1581. His works are, "The Rule of Reason, containing the Art of Logic;" "The Art of Rhetoric;" "Discourse upon Usury;" "Epistola de Vita et Obitu duorum Fratrum Suffolciensium, Henrici et Caroli Brandon."—*Gen. Biog. Dict.*

WIMPHIELING (JAMES) a learned writer of the fifteenth century, who was a native of Germany, and an ecclesiastic belonging to the church of Spire. He taught philosophy and theology, first at Erfurd and afterwards at Heidelberg; and obtained reputation as an orator and a poet. His works consist of treatises on rhetoric and the art of poetry, orations, and poems on a variety of subjects. He died in 1528, at the age of 76.—*Trithemius. Boulerwik.*

WINCHESTER (THOMAS) rector of Appleton in Berkshire, was born at Farringdon in the same county, and was educated at Magdalen college, Oxford, where he took his doctor's degree, and became fellow. He died in 1780. He wrote "A Dissertation on the Seven-

teenth Article of the Church of England," 8vo, 1773, of which a new edition was published in 1803, with a life of the author.

WINCKELMANN (JOHN JUSTUS) a German historian, born at Giessen in 1620. He studied at his native place, and after having travelled for improvement, became historiographer to the landgrave of Hesse. He died in 1697. Among his works are "De Principibus Hassiæ et eorum Genealogia," Giessen, 1663, 8vo; "Arboretum Genealogicum Heroum Europæorum, ostendens quomodo omnes fere Europæi Principes ex unica Oldenburgica Familia et quidem à Dieterico Fortunato defluant," Oldenb. 1664, folio; "Cæsarologia, sive Quartæ Monarchiæ Descriptio à Jul. Cæsare ad imperium usque Leopoldi," Leips. 1666, 8vo, a German work with a Latin title; "Notitia Historico-politica veterum Saxo-Wesphalum, finitimarumque regionum, iv. libris absoluta," 1667, 4to; and "A Description of the Principalities of Hesse and Hersfeld."—*Biog. Univ.*

WINDUS (JOHN) an English traveller, who in 1720 accompanied commodore Stewart, who was sent to make a treaty with the emperor of Morocco. The expedition sailed from England September 24, and arrived at Gibraltar October 30. The commodore then proceeded to Tetuan, and afterwards to Mequinez, where, after some delay, the treaty was concluded, in consequence of which nearly three hundred English captives were liberated, and brought to England. Windus, on his return home, published an account of the expedition, entitled "A Journey to Mequinez, the Residence of the present Emperor of Morocco," London, 1725, 8vo. The work contains some interesting information concerning the north of Africa, and the course of the river Niger, which is represented as terminating in the sea to the south of Guinea.—*Biog. Univ.*

WINSOR (FREDERICK ALBERT) a projector, who distinguished himself by introducing the use of coal gas for lighting streets and houses. His first public experiments on this new mode of illumination, were made at the Lyceum in the Strand, in 1803. He afterwards lighted with gas the walls of Carlton Palace Gardens, in St. James's Park, on the king's birthday, in 1807; and during 1809 and 1810 he lighted one side of Pall Mall, from the house which he then occupied in that street. For many years his residence was openly shown, fitted up throughout with gas lights, in order to display the practicability of his scheme. The memorial to his majesty George III. for a charter, and the evidence produced in parliament and before the privy council, afford ample testimony of the zeal with which he pursued the object which he had undertaken, and in 1812 his endeavours were crowned with success, by the grant of a charter of incorporation for a gas-light and coke company. In consequence, however, of some misunderstandings with the persons with whom he was associated, he did not obtain that recompense for his exertions which he had anticipated. In 1815 he went to France,

APP. BIOG. DICT.

where he first erected gas-works, and established a gas-light company, but rival interests gave rise to other institutions, and he was again disappointed in his expectations. This active, enterprising, but too visionary adventurer died at Paris, in 1830, in the 68th year of his age.—*Month. Mag.*

WOLLASTON (WILLIAM) a distinguished cultivator of science, who was descended from the author of the "Religion of Nature;" and was the son of the Rev. Francis Wollaston. He was born August 6, 1766, and received his education at Caius college, Cambridge, where he proceeded MB. in 1787, and MD. in 1793. He settled as a physician at Bury St. Edmund's, but meeting with little practice he removed to London. Soon after his arrival in the metropolis, he became a candidate for the vacant office of physician to St. George's Hospital; and being unsuccessful, he was so disgusted at the circumstance, that he determined to relinquish his profession. Though occupied, at various times, with many different branches of science, chemistry was that to which he was most ardently devoted; and to his researches concerning it, and his consequent discoveries, he chiefly owed his high reputation. In 1793 he was chosen a fellow of the Royal Society; and in November, 1806, he was elected second secretary to that institution. Towards the close of 1828 he was taken dangerously ill, and his death took place December 22nd, that year. Some of Dr Wollaston's discoveries were productive, not only of fame, but likewise of profit; as that of the process for procuring platina in a malleable state, by which he is said to have gained 30,000*l.* Among his discoveries and inventions may be mentioned the Lucernal Microscope, the Periscopic Camera Obscura, the Reflective Goniometer, the Scale of Chemical Equivalents, an improved Micrometer, the new metal called Palladium, and the Cystic Oxide. He was the author of various papers in the Philosophical Transactions, and periodical journals.—*Ann. Reg.*

WOODD (BASIL), a pious clergyman of the church of England, and theological writer; who was born at Richmond in Surrey, in 1760. He was educated at Trinity college, Oxford, where he took the degree of M.A. in 1785. Having entered into holy orders he became assistant to Dr Conyers, rector of St Paul's, Deptford, and shortly afterwards he was chosen rector of St Peter's, Cornhill; and in 1785 he obtained the appointment of morning preacher at Bentinck chapel, in the parish of St Marylebone, which he held till his death, in April, 1831. He was also rector of Drayton Beauchamp, in Buckinghamshire, to which benefice he was presented in 1808 by lord Robert Manners. Mr Woodd was a most active member of Bible and Missionary Societies, and other religious associations. Among his publications may be mentioned a "Memoir of Mrs Hannah Woodd," his mother; "Advice to Youth;" "The Duties of the Marriage State;" a "Memoir of Mowhee, a New Zealand Youth, who died at Paddington;" and

X

"Selections from versions of the Psalms of David," and other portions of the sacred writings, in which are some original compositions.

—*Ann. Biog.*

WOODFORD (SAMUEL) rector of Hartley Mandit in Hampshire, prebendary of Winchester and of Winchester, was born in London in 1636, and studied at Wadham college, Oxford. In 1677 he received the degree of doctor in divinity from archbishop Sancroft. He was likewise a fellow of the Royal Society. He wrote paraphrases on the Psalms and Canticles, and miscellaneous poems.—*Wood.*

WOODHOUSE (ROBERT) Plumian professor of mathematics at Cambridge, where he died December 23, 1827. He was a fellow of Caius college, and one of the members of the Royal Society. In 1820 he was chosen Lucasian professor of mathematics, and he succeeded to the Plumian professorship on the death of Dr Samuel Vince. He was appointed by the university keeper of the newly-erected observatory in 1824. Among his published works are, "The Principles of Analytical Calculation," 1803, 4to; "A Treatise on Plane and Spherical Trigonometry," 1809, 8vo; "A Treatise on Isoperimetric Problems," 1811; "A Treatise on Astronomy," 1812; besides papers in the Philosophical Transactions.—*Month. Mag.*

WOTTON (NICHOLAS) a statesman, and uncle to Sir Henry Wotton, was born in Kent about 1497, and took the degree of doctor of laws at Oxford. He was appointed by archbishop Cranmer commissary of the faculties, and in 1541 he was made dean of Canterbury, and afterwards of York. He refused a bishopric, and was employed in several embassies. In the reign of Edward VI he was created secretary of state. In 1551 he was sent on an embassy to the emperor of Germany, and thenceforward he fixed his residence at the court of France. He died in London in 1566. He was concerned in the compilation of a work entitled "The Institution of a Christian Man."—*Todd's Deans of Canterbury.*

WRAXALL, Bart. (Sir NATHANIEL WILLIAM) an eminent traveller and historical writer, who was born in Queen-square, Bristol, April 8, 1751, having been the only son of a merchant of that city. He was educated at his native place, and in 1769 he was sent to Bombay, in the civil service of the East India Company. In 1771 he acted as Judge Advocate and Paymaster of the forces of that presidency, in the expeditions to Gurnat and against Baroque. Having returned to Europe in 1772, he went by sea to Portugal; and he passed nearly the whole of the next seven years on the continent of Europe, almost every country of which, from Naples to Lapland, he visited. He was then employed on a confidential mission by the exiled queen of Denmark, the British princess Caroline Matilda. In 1775, he published some notices of his travels, under the title of "Cursory Remarks made in a Tour through some of the Northern

Parts of Europe, particularly through Copenhagen, Stockholm, and Petersburg," 8vo, which passed through four editions. In 1777, he appended another portion of his travels to his first historical work, entitled "Memoirs of the Kings of France of the Race of Valois: interspersed with interesting Anecdotes. To which is added, a Tour through the Western, Southern, and Interior Provinces of France, in a Series of Letters," 2 vols, 8vo. A French edition of this last tour was printed in Holland, 1784; and an English edition was published at the same time in London. In 1785 appeared also a second edition of the "House of Valois," with several considerable additions; and the title of "Memoirs" altered to "History." In 1780 he was chosen a member of the House of Commons, in which he sat for nearly fourteen years. In 1795 he published "The History of France from the Accession of Henry III. to the death of Louis XIV. Preceded by a View of the Civil, Military, and Political State of Europe, between the Middle and the Close of the Sixteenth Century," 3 vols, 4to; reprinted in 6 vols, 8vo, in 1814. In 1796 he published "A Translation of the Correspondence between a Traveller and a Minister of State in Oct. and Nov. 1792; preceded by Remarks upon the Origin and the final Object of the present War; as well as upon the Political Position of Europe in Oct. 1796." In 1799 appeared, in 2 vols, 8vo, his "Memoirs of the Courts of Berlin, Dresden, Warsaw, and Vienna," 2nd edition, 1800. He was created a baronet by patent, dated Dec. 31, 1813. His last work was published in 1815, under the title of "Historical Memoirs of my Own Time; Part the First, from 1772 to 1780; Part the Second, from Jan. 1781 to March 1782; Part the Third, from March 1782 to March 1784;" in 3 vols, 8vo. These Memoirs excited some severe criticism, to which the author replied in two pamphlets: "An Answer to the Calumnious Misrepresentations of the Quarterly Review, the British Critic, and the Edinburgh Review, contained in their Observations on Sir N. W. Wraxall's Historical Memoirs of his Own Time, 1815;" and "A Second Answer to the Calumnious Attacks of the Edinburgh Review, 1816." He, however, had to encounter besides the critics, a more formidable adversary, in the person of the attorney general. Being convicted of a libel, he was committed to the King's Bench Prison, in May, 1816, for, as he states, an unintentional act of inadvertence, committed in the first edition of his "Memoirs." He died at Dover, Nov. 7, 1831, on his way to Naples, aged 80. Sir N. W. Wraxall is said to have written his Memoirs in imitation of Bishop Burnet's History of his own Time; and the work, independent of the temporary interest attached to it, through the prosecution of the writer, possesses claims to notice, as a fund of anecdote, the result of favourable opportunities for observation, during an important period of our national annals.—*Biog. Dict. of Living Authors. Gent. Mag.*

WRIGHT (EDWARD) a mathematician,

W Y T

was born at Garveston in Norfolk, and became fellow of Caius college, Cambridge. He went abroad with the earl of Cumberland, of whose voyages he drew a chart and kept a journal. He was then mathematical lecturer to the East India company, and was the first discoverer of the true manner of dividing the meridian line, the basis of the charts and rule of sailing known by the name of Mercator's. He died in 1615. He wrote a treatise on "The Correction of certain Errors of Navigation;" and another, "The Haven-finding Art."—*Martin's Biog. Phil.*

WRISBERG (HENRY AUGUSTUS) an eminent anatomist. born June 20, 1739, at St Andreasberg, in the Harz, in Germany. He studied at Gottingen, where in 1763 he took the degree of MD. The following year he travelled in France and the Netherlands; and returning to Gottingen became professor of obstetrics and anatomy. He died March 29, 1808. Wrisberg published many valuable works, chiefly relating to the anatomy of the nerves, the absorbents, and the uterus. He was a member of the Royal Society of Gottingen, and a considerable contributor to the Transactions of that learned body.—*Biog. Univ.*

WYTTENBACH (DANIEL) a learned philologist of the Dutch school, who was a native of Berne, and was born in 1746. His father having been appointed a professor at

W Y T

Marpurg, he was admitted a student of that university. He afterwards went to Gottingen to study under Heyne, with the assistance of whose advice he published, in 1769, "Epistola Critica ad vir. cel. Dav. Ruhkenium, super nonnullis locis Juliani Imp. cui accesserunt Animadversiones in Eunapium et Aristænetum." This learned work procured him the friendship of Ruhken, whom he visited at Leyden, and who obtained for him the professorship of philosophy and literature in the college of the Remonstrants at Amsterdam. He subsequently devoted his talents to the illustration of the works of Plutarch; and in 1772 he printed at Leyden the treatise of that writer, "De sera Numinis Vindicta," with a learned commentary. In 1779 the magistrates of Amsterdam created a philosophical professorship at an institution called the Illustris Athenæum, to which Wytenbach was presented; and there he continued till the close of his life, notwithstanding splendid offers were made to induce him to remove elsewhere. The result of his researches relative to Plutarch appeared in his excellent critical edition of the Moral Works of Plutarch, published at Oxford, 1795—1802, 5 vols, 4to. Professor Wytenbach was the author of "Præcepta Philosophiæ Logicæ," Amst. 1781, 8vo; and several other works besides those before mentioned. He died in the beginning of the year 1820.—*Ibid.*

Y E L

YEATS (THOMAS PATTINSON) an eminent English naturalist, who was one of the earliest systematic writers on entomology. He was a fellow of the Royal Society; and he died in 1782. He published "Institutions of Entomology," Lond. 1773, 8vo, a work founded on the Ordines et Genera Insectorum of Linnaeus; and "A Catalogue of a Collection of Birds, Quadrupeds, &c. from Cayenne, sold by auction April 1782," 8vo.—*Dryander's Bibliot. Banks.*

YELIN (JULIUS CONRAD VON) an eminent mathematician, and natural philosopher, who was a native of Bavaria. After having held an office under the Prussian government at Anspach, he entered into the Bavarian service; and at length he became councillor of finance, a knight of the Order of Merit, and a member of the Academy of Sciences at Munich. In 1826 he accompanied baron von Eichthal in a tour of scientific research through the Netherlands, France, England, and Scotland; but having reached Edinburgh, he was there taken ill and died April 20, 1826, at the age of fifty-five. Among his published works may be mentioned an "Introduction to Experimental Philosophy," Anspach, 1796; "On Magnetism and Electricity," Munich, 1818; and various essays and papers on electro-chemistry and other branches of Physics, which were printed separately, or in

Y O U

Gilbert's Annals of Natural Philosophy.—*New German Necrology.*

YOUNG (DR THOMAS) a celebrated physician and natural philosopher, who was a nephew of Dr Brocklesby. Through the assistance of this relative he obtained an excellent education, partly at the university of Gottingen and partly at Edinburgh. At the latter university, he took his medical degrees, and afterwards coming to London, he was for some time lecturer at the Royal Institution. In 1807 he produced a work of great merit under the title of "A Course of Lectures on Natural Philosophy and the Mechanical Arts," 2 vols, 4to. The substance of these lectures had been delivered at the Royal Institution, and appended to them is an admirable catalogue of books relating to the subjects of which they treat. Subsequently to the publication of this work he was chosen one of the physicians to St George's hospital, when he relinquished his lectureship at the Royal Institution. In 1812 he published "A System of Practical Nosology, with an Introduction to Medical Literature, intended as a Guide to Students, and an Assistant to Practitioners," 8vo, which forms a kind of counterpart to his lectures on natural philosophy. His attention was not confined to subjects immediately connected with his profession. He was well acquainted with classical literature, and was a contributor

to Hodgkin's "Calligraphia Græca" and Dalzell's "Collectanea Majora." He also interested himself greatly in the discoveries made by Belzoni in Egypt, and engaged in researches concerning Egyptian hieroglyphics, to which the attention of the learned has been so much attracted by the writings of M. Champollion. On this subject, Dr Young published, in 1823, an "Account of some Discoveries in Hieroglyphical Literature and Egyptian Antiquities, including the Author's original Alphabet," 8vo; and this curious subject is further illustrated by Mr Salt, in his "Essay on Dr Young's and M. Champollion's Phonetic System of Hieroglyphics." Dr Young was, at one time, involved in a controversy with a foreign mathematician named Wronski, who proposed communicating some alleged discoveries in science to the Royal Society. His death, which was occasioned by some organic disease of the chest, occurred in May, 1829, at his residence in Park-square, Regent's-park, London. Besides the works already mentioned, he published an academical thesis, "De Corporis Humani Viribus conservatricibus," Gotting. 1796, 8vo; "Syllabus of a Course of Lectures on Natural and Experimental Philosophy," 1803, 8vo; "An Analysis of the Principles of Natural Philosophy," 1803, 8vo; "A Reply to the Animadversions of the Edinburgh Reviewers," 1808, 8vo; "A Syllabus of Lectures on the Elements of the Medical Sciences, and on the Practice of Physic," 1809, 8vo.—*Month. Mag. Edit.*

YPSILANTI (prince ALEXANDER) a Wallachian nobleman, who may be considered as having been the first avowed agent in the Greek Revolution. He was the son of the hospodar of Wallachia, who assumed the government of that country in 1802. About three years after his installation as prince, Ypsilanti's father received a summons from the grand signior to repair to Constantinople. Knowing that obedience to this order would probably cost him his life, he determined on retiring into Russia with his family and followers. Here the son, Alexander, adopting the military profession, entered into the Russian army, and in several battles with the French obtained considerable reputation, and was at length made a major-general and aid-de-camp to the emperor. On account of his military talents and success, as well as his distinguished birth, he was fixed on by the members of the Stratocracy as a competent person to commence the revolution in Wallachia and Moldavia. His name must therefore be transmitted to posterity in immediate connexion with the origin of this noble cause. But still, judging from his after actions, as well as the unfortunate result of his proceedings in the principalities, it must be confessed that the

choice might have fallen on a more efficient and probably more fortunate leader. He exhibited, in a degree almost ludicrous, a species of pride and hauteur calculated to disgust rather than attach his military followers. Instead of mixing with the troops, he always kept himself strictly apart from them. Indeed to so high a pitch did he carry his feelings of superiority or exclusive rank, that whenever he was stationed for any time on a particular spot, he used to cause to be marked out a precise point, which he termed the *sacred way*, and beyond which no one was allowed to pass except himself and his own brothers. This sort of family pride and tenaciousness of ceremony was so directly opposed to the principles of the cause in which he was engaged, that it could not fail to be attended with disadvantageous consequences. After the unfortunate results of the battle in which he was engaged at Dragachan, he was compelled to seek refuge in the Austrian dominions, where he spent the remainder of his life in confinement, though it does not appear that he had offended against the laws of Austria, nor on what account he was made a prisoner. He died at Vienna, January 29th, 1828.—*Gent. Mag.*

YSABEAU or ISABEAU (ALEXANDER) a French statesman, who acted a conspicuous part during the reign of terror in the progress of the Revolution. He was sent as a deputy from the department of Indre and Loire to the National Convention, in which he voted for the death of Louis XVI. He repeatedly drew up reports in the name of the committees of petitions and correspondence, and furnished comments on the statements issued by the party then in power. In 1793 he was sent to Bourdeaux with Tallien and Beudot, when he appears to have powerfully cooperated in the system of violence and cruelty too generally adopted by the agents of the Convention. Notwithstanding this, he was accused of "moderantism," and recalled, as was also Tallien; but after the events of the ninth of Thermidor, he was again sent to the same city, when he endeavoured to repair the injuries and redress the grievances which he and his colleagues had previously occasioned or perpetrated. He afterwards became a member of the Council of Ancients, on his exit from which he was appointed by the Executive Directory commissioner substitute of the Directory in the administration of the post-office at Brussels, in June, 1798. He held some employment in the same department at Paris, in 1814; and this he lost in consequence of the prevailing influence of that party against which he had acted during his political career. He died in poverty and obscurity, at Paris, in 1823.—*Dict. des Hommes Marquans du 18me S. Biog. Nouv. des Contemp.*

ZACHARIÆ (FREDERIC WILLIAM) a German poet, distinguished for the spirit and grace of his productions. He was a professor at Brunswick, where he died in 1777. He was the author of some mock epic poems, which display keen satire and a lively imagination. One of his pieces, entitled the "Creation of Hell," was printed with other poems at Altenburg, 1760, 8vo; and his poetical writings were published collectively at Carlsruhe, 1777, 6 vols, 8vo. The works of this poet have scarcely met with so favourable a reception as they deserved among his countrymen, and the new theory of the belles lettres introduced by the moderns has had an unfavourable effect on his reputation.—*Maty's Lond. Rev. Zopf.*

ZINGHA (BENDI) queen of Angola, was the sister of Gola Bendi, who was sovereign of that country in the seventeenth century. This despot had massacred all his relatives except Zingha, and another of his sisters. Gola Bendi himself having been defeated by the Portuguese, was poisoned by Zingha, who then ascended the throne, and to secure her power put to death her nephew, the son of her late brother. She was soon after dethroned by the Portuguese, and taking refuge in the interior of Africa among the Giagas, a tribe of ferocious savages, she was chosen their sovereign. After having governed them thirty years, this princess in her old age, became the victim of remorse for the crimes which she had committed. The Portuguese viceroy of Loando being informed of the state of her mind, sent to her a capuchin missionary,

who received her abjuration of idolatry, and readmitted her into the church, for she had been baptized at a former period. Zingha then published edicts for the abolition of human sacrifices, and the suppression of other cruel superstitions, and applied herself with zeal to spread the knowledge of Christianity among her subjects. She died in 1663, in the eighty-second year of her age. This princess, during the life of her brother, being sent on a mission to the court of the Portuguese viceroy, on perceiving that no seat but a cushion on the floor was provided for her at her audience with the Portuguese governor, she ordered one of her attendants to stoop down on her hands and knees to form a seat for her accommodation.—*Biog. Univ. Dict. Hist.*

ZRINYI (NICHOLAS) a Hungarian poet, born in 1618. He published in 1664 an epic poem, in fifteen books, called the "Zrinyas, or the Syren of the Adriatic;" in which he celebrates the heroic deeds of one of his ancestors, who was also his namesake. Count Mailâth (the author of German Translations of Hungarian Poetry, 1825) praises the Zrinyas, for its religious feeling, its power, its patriotic and heroic spirit. The language is said to be pure, though rude: but it has the monotonous form of four-lined verses of unvarying rhyme, like the Spanish romance of the Cid. Zrinyi introduced the accented poetry of the moderns, which now bears his name, into Hungary. His works were printed at Vienna in 1651; and an edition of them was published at Pest in 1817.—*For. Quar. Rev.*

CATALOGUE OF WORKS

IN THE

Latin, English, French, Italian, & German Languages.

RELATING TO

BIOGRAPHY AND LITERARY HISTORY.

1.—S. Hieronymi Libellus de Illustribus Ecclesiæ Doctoribus, ad sua usque tempora. Helmstadt, 1611, 4to.

2.—Joh. Trithemii de Scriptoribus Ecclesiasticis, sive per Scripta Illustribus in Ecclesia Viris; cum duabus Appendicibus, et Indice fidelissimo. Colon. Agripp. 1546, 8vo.

3.—Conr. Gesneri Bibliotheca Universalis, sive Catalogus omnium Scriptorum locupletissimus in tribus linguis, Lat. Græc. et Heb. exstantium et non exstantium, veterum et recentiorum. Tigur, 1545, fol.

4.—Appendix Bibliothecæ Conradi Gesneri. Ibid. 1555, fol.

5.—C. Gesneri Pandectarum sive Partitionum Universalium, libri xxi. Ibid, 1548, fol.

6.—C. Gesneri Bibliotheca postremo amplificata per J. J. Frisium. Ibid, 1583, fol.

An Abridgment of the Bibliotheca of Gesner, with improvements, was published by Josias Simler, professor of theology at Zurich, who, according to Melchior Adam, retained the whole original work in his memory. Frisius, who was the last editor of Gesner, adopted the improvements of Simler. He also was the author of "Biblioth. Philosoph. Classicor. Chronologica," 1592, 4to; but this last work is extremely incorrect.

7.—Joh. Sambuci Icones Veterum et Recentium Medicorum, Philosophorumque, cum Elogiis. Amstelod. 1612, fol.

8.—Pet. Lambecii Prodomus Historiæ Litterariæ. Hamb. 1659, fol.

This History of Literature, unfortunately, extends but to the period of the Argonautic Expedition, forming only the first book, and part of the second, of a magnificent work, to have been completed in thirty-eight books. This fragment was republished by J. A. Fabricius in 1710, together with some of the Opuscula of Lambecius.

9.—Paul Freheri Theatrum Virorum Eroditiõe singulari clarorum. Norimb. 1688, fol

10.—Gul. Batesii Vitæ Selectorum aliquot Virorum, qui Doctrina, Dignitate, Litte inclaruere. Lond. 1681, 4to.

11.—Gul. Cavei Tabulæ Doctorum et Scriptorum Ecclesiasticorum. Hamb. 1676, fol

Y 2

LATIN WORKS ON BIOGRAPHY.

- 12.—G. Cavei *Scriptorum Ecclesiasticorum Historia Literaria*. 1688, fol.
Reprinted at Geneva; but the best edition is that of Oxford, 1740—43, 2 vols. fol.
- 13.—Fran. Godwini de *Præsulibus Angliæ Commentarius*. Lond. 1616. 4to.
A new and much improved edition of this work was published by the Rev. W. Richardson, Cambridge, 1743, folio. Bishop Godwin's work was first published in English in 1601, and was translated into Latin by the author.
- 14.—Nathan. Sotvelli *Bibliotheca Scriptorum Societatis Jesu, Opus a Petro Ribadeneira inchoatum, a Phil. Alegambe continuatum, nunc productum ad annum 1675*. Romæ, 1676, fol.
- 15.—Jac. Gaddii *Opus de Scriptoribus non Ecclesiasticis,—Græcis, Latinis, et Italicis*. Florentiæ, 1648, et Lugduni, 1649, 2 vols. fol.
- 16.—*Elogia Germanorum quorundam Theologorum, sæculi xvi. et xvii.* Collectore G. H. Goetizio. Lubec, 1708, 8vo.
- 17.—*Elogia Philologorum quorundam Hebræorum*. Coll. G. H. Goetizio. Lubec, 1708, 8vo.
- 18.—Th. Smithii *Vitæ quorundam Eruditissimorum et Illustrum Virorum*. London, 1707, 4to.
- 19.—Herm. Conringii de *Scriptoribus XVI. post Christum natum Sæculorum Commen-
tarius*. Vratii. 1727, 4to.
This was a posthumous publication, derived from the academical lectures of the learned author.
- 20.—G. J. Vossii de *Historicis Græcis et Latinis comment.* Lugd. Bat. 1651, 2 vols. 4to.
- 21.—Nic. Antonii *Bibliotheca Hispana Vetus*. Rom. 1696, 2 vols. fol.
- 22.—N. Antonii *Bibliotheca Hispana Nova. &c.* post ann. MD. Rom. 1692, 2 vols. fol.
A new edition of Antonio's Ancient Spanish Library was published by Ibarra, Madrid, 1783, 2 vols. fol.; and the Modern Spanish Library, Madrid, 1783, 2 vols. folio.
- 23.—Tho. P. Blount *Censura Celebriorum Authorum*. Lond. 1690, folio; reprinted, Genev. 1710, 4to.
- 24.—J. H. Boecleri *Com. de Scriptoribus Græcis et Latinis, ab Homerum ad initium Sæculi XVI, post Christum natum*. Argentorat, 1708, 8vo.
- 25.—Melch. Adami *Vitæ Germanorum Theologorum qui superiori sæculo Ecclesiam Christi Voce, Scriptisque propagarunt et propagnarunt*. Heidelb. 1620, 8vo.
- 26.—M. Adami *Decades duas continentes Vitæ Theologorum Exterorum principum, qui Ecclesiam Christi superiori sæculo propagarunt et propagnarunt*. Francof. 1618, 8vo.
The two preceding works are included in "Adami *Vitæ Theologorum, Jurisconsultorum, Politicorum, Medicorum et Philosophorum, maximam partem Germanorum*." Francof. 1705, fol.
- 27.—Rob. Bellarmini de *Scriptoribus Ecclesiæ Liber unus; cum Brevi Chronologia ab Urbe condita ad ann. 1622*. Colon. Agripp. 1622, 8vo.
- 28.—Christoph. Christ. Sandii *Bibliotheca Antitritinarianorum, sive Catalogus Scriptorum et succincta Narratio de Vita eorum Auctorum, qui Dogma vulgo receptum de Tribus in unico Deo per omnia æqualibus Personis vel impugnarunt, vel docuerunt solum Patrem D. N. I. Christi esse illum verum seu altissimum Deum*. Freistadii, 1684, 8vo.
- 29.—J. C. Wolfii *Bibliotheca Hebræa, sive Notitia Auctorum Hebræorum cujusunque ætatis*. Hamb. et Lips. 1715—33, 4 vols. 4to.
A Supplement to the work, by Koecher, was published at Jena, 1783.
- 30.—Humph. Hodii de *Græcis Illustribus, Lingus Græcæ Litterarum Humaniorum Instaurationibus, Libri II.* Lond. 1742, 8vo.

LATIN WORKS ON BIOGRAPHY.

31.—J. J. Bruckeri, *Historia Critica Philosophiæ a Mundi incunabulis ad nostram usque Ætatem deducta*. Lips. 1741—44, 5 vols. 4to.

Republished, with an additional 6th vol. 1766-67.—An abridgment of this work, in English, by Dr William Enfield, appeared in 1791, 2 vols. 4to.—The labours of Brucker, and of his English epitomizer, have been superseded on the continent by the more elaborate productions of Tennemann and Buhle, especially in relation to the history of mediæval and modern philosophy.

32.—J. J. Bruckeri *Pinacotheca Scriptorum nostra Ætate Illustrum*. Aug. Vindel. 1741, 2 vols. fol.

33.—J. J. Hoffmanni *Lexicon Universale, Historicum, &c.* Ludg. Bat. 1698, 4 vols. folio.

34.—Jac. Phil. Tomasini *Elogia Virorum Litteris Illustrum*. Patav. 1630—44, 2 vols. 4to.

35.—Joh. Lelandi *Commentarii de Scriptoribus Britannicis*. Oxon. 1709, 2 vols. 8vo.

36.—Joh. Balei *Scriptorum Illustrum Majori Britannici Summarium*. Ipswich, 1548, 4to. Basil. 1557, fol.

37.—Joh. Pitsei *Relationum Historicarum de Rebus Anglicis, seu de Academiis et Illustribus Angliæ Scriptoribus, tomus primus*. Paris, 1619, 4to.

The original plan of this work was to include the History of all the English Kings and Bishops, as well as Learned Men, in four volumes; but the last three remain in MS. This was republished in 1699.

38.—Tho. Tanneri *Bibliotheca Britannico-Hibernica, sive de Scriptoribus qui in Anglia, Scotia et Hibernia ad Sæculi XVII initium floruerunt*. Opus utilissimum et 40 annorum studio elaboratum. Lond. 1748, fol.

39.—T. Dempsteri *Historiæ Ecclesiasticæ Gentis Scotorum Libri XIX*. Bonon. 1627, 4to.

Dempster has given short accounts of a number of Scottish writers: but a ridiculous vanity induced him to introduce into his catalogue of Scotchmen several who were natives of other countries.

40.—Jac. Warei *de Scriptoribus Hiberniæ Commentarius*. 1639.

This tract, with the rest of the works of sir James Ware, was translated by Walter Harris, and published in 1746, with considerable additions by the translator.

41.—Anton. a Wood *Historia et Antiquitates Universitatis Oxoniensis, cum Ichnographia Oxoniæ*. Oxon. 1674, fol.

An English translation of this work, with a continuation by John Gutch, MA. was published at Oxford, 1786, 4to.

42.—Christoph. Matt. Pfaffii *Introductio in Historiam Theologiæ Litterariam*. Tubing. 1724, 2 vols. 4to.

43.—Joh. Alb. Fabricii *Bibliotheca Græca; seu Notitia Scriptorum veterum Græcorum*: cura T. C. Harles. Edit. 4ta, Hamb. 1790—1809, 12 vols. 4to.

44.—J. A. Fabricii *Bibliotheca Latina, nuna melius delecta, rectius digesta, et aucta diligentia J. A. Ernesti*. Lips. 1773-4, 3 vols. 8vo.

45.—J. G. A. Oelrichs *Commentarii de Scriptoribus Ecclesiæ Latinæ priorum VI. sæculorum*; præfatus est et editionem curavit A. H. L. Heeren. Lips. 1791, 8vo.

46.—Curt. Sprengelii *Historia Rei Herbariæ*. Amstel. 1807-8, 2 vols. 8vo.

Dr Springel also published a History of Botany, in German, Leipsic, 1817, 2 vols. 8vo.

47.—Christoph. Saxii *Onomasticon Literarium*. Traj. ad Rhen. 1775—1803, 8 vols. 8vo.

This is an immense chronological index of general literature, containing in the last volume a list of the numerous productions of the learned author, who published in 1792 an abridgment of the first two volumes, under the title of "*Onomastici Literarii Epitome*," 8vo.

48.—G. J. Vossii *de Poetis Græcis et Latinis Com.* Amstel. 1662, 4to.

ENGLISH WORKS ON BIOGRAPHY.

49.—Gottl. Stollii *Introductio in Historiam Litterariam, Latine vertit C. H. Lang.* Jena, 1728, 4to.

50.—J. F. Foppens *Bibliotheca Belgica, sive Virorum in Belgium Vita, Scriptisque illustrium Catalogus.* Bruxel. 1739, 2 vols. 4to.

51.—J. F. Buddsi *Introductio ad Historiam Philosophiæ Ebræorum.* Hal. Sax. 1728, 12mo.

52.—Suffrid. Petri de *Scriptoribus Frisiz Decades XVI. et semis.* Colon. Agripp. 1593, 8vo; repr. Franeker, 1699, 12mo.

53.—J. Schefferi *Sœcia Literata, seu de Scriptis et Scriptoribus Gentis Sœcicæ,* edit. a Mollero. Hamb. 1698, 12mo.

54.—Albert. Thurnæ *Idea Historiæ Litterariæ Danorum.* Hamb. 1723, 8vo.

55.—A. Thurnæ *Gynæcium Daniæ Litteratum.* Alton. 1732, 12mo.

56.—N. P. Sibbern. *Bibliotheca Historica Dano-Norvegica; sive de Scriptoribus Rerum Dano-Norvegicarum Commentarius Historico-Literarius.* Hamb. 1716, 8vo.

57.—*General Dictionary, Historical and Critical, including a new Translation of Bayle's Dictionary.* Lond. 1734, 10 vols. fol.

58.—*Biographical Dictionary, containing an Account of the Lives and Writings of the most eminent Persons in every Nation, particularly the British and Irish.* New edit. by A. Chalmers, 1813—17. 32 vols. 8vo.

The first edition of this work, by Dr Ralph Heathcote and others, was published in 1761, 12 vols.

59.—Dr John Aikin's *General Biography, or Lives, Critical and Historical, of the most eminent Persons of all Ages, Countries, Conditions, and Professions, arranged according to alphabetical order.* 10 vols. 4to.

Dr Aikin's principal coadjutors in this work were Dr Enfield, Rev T. Morgan, and W. Johnston.

60.—John Lempriere's *Bibliotheca Classica, or a Classical Dictionary, containing a full Account of all the Proper Names mentioned in Ancient Authors, with Tables of Coins &c.* 1788, 8vo.

This work was considerably improved in several subsequent impressions by the original compiler, who also published an enlarged edition in quarto. It has been recently re-edited by Mr E. H. Barker, who has introduced the additions made to the Dictionary by Professor Anthon of New York. Dr Lempriere also published a dictionary of modern literature, entitled *Universal Biography.*

61.—Sir Wm. Dugdale's *Baronage of England.* Lond. 1675-76, 2 vols. fol.

62.—Arthur Collins's *Peerage of England, with a Supplement by Barak Longmate.* 1779, 9 vols. 8vo. New edit. by Sir S. Egerton Brydges, 1812, 9 vols.

63.—*Biographical Peerage of the British Empire.* 1808, 4 vols. 12mo.

64.—Burke's *Dictionary of the Peerage and Baronetage of the United Kingdom.* 1827, 8vo

65.—Rev Wm. Betham's *Baronetage of England.* 1801-5, 5 vols. 4to.

66.—Geo. Mackenzie's *Lives of the most eminent Scots Writers, with a Catalogue of their Works.* 1708, 3 vols. fol.

67.—*Biographia Britannica, or the Lives of the most eminent Persons of Great Britain and Ireland.* 1747, 7 vols. fol.

This work, which was compiled by Dr John Campbell and others, served as the basis of a new publication under the same title by Dr Andrew Kippis, Dr Joseph Towers, &c. commenced in 1778, which advanced no farther than the fourth letter of the alphabet, and the fourth volume, published in 1793.

68.—Richard Ryan's *Biographical Dictionary of the Worthies of Ireland.* 2 vols. 8vo.

69.—W. Pugh Owen's *Cambrian Biography.* 12mo.

ENGLISH WORKS ON BIOGRAPHY.

70.—John Berkenhout's *Biographia Literaria, or a Biographical History of Literature, containing the Lives of English, Scottish, and Irish Authors.* Vol. I. 1777, 4to.

This work was never completed, the present volume extending only to the beginning of the seventeenth century.

71.—Dr Thos. Fuller's *Abel Redivivus, or Lives of eminent Divines.* 1651, fol.

72.—Dr T. Fuller's *History of the Worthies of England.* London, 1662, folio.

A new edition of this work, with a few notes by John Nichols, FSA. was published in 1811, 2 vols. 4to.

73.—Anth. A. Wood's *Athenæ Oxonienses: a History of the Writers and Bishops educated at Oxford.* New edit. with additions, by the Rev Phil. Bliss, 1813—1819, 4 vols. 4to.

The original edition of the *Athen. Oxon.* appeared in 1721, 2 vols. fol.

74.—*British Biography.* 10 vols. 8vo.

A compilation, said to have been executed by Dr Joseph Towers, consisting of memoirs abridged from the *Biographia Britannica.*

75.—British *Plutarch*, containing the Lives of the most eminent Persons of Great Britain and Ireland, from the Accession of Henry VIII to the Present Time, re-arranged with additional Lives by Archdeacon Wrangham. 1816, 6 vols. 8vo.

This work, originally published in duodecimo, was the production of Thomas Mortimer.

76.—Rev Jas. Granger's *Biographical History of England.* 1779, 4 vols. 8vo.

77.—Rev Mark Noble's *Biographical History of England, from the Revolution to the end of George the First's Reign.* 1806, 3 vols. 8vo.

This is a continuation of the preceding work, consisting like that of *Characters of Distinguished Persons* arranged in separate classes, and adapted to *Methodical Catalogues* of engraved British Heads. The two works have been recently republished in 6 vols. 8vo.

78.—Rev J. Prince's *Worthies of Devon, containing the Lives of Eminent Persons, Natives of Devonshire.* New edit. with notes, 1810, 4to. Originally published in 1 vol. fol. Exeter, 1701.

79.—Dr Thomas Birch's *Memoirs of Distinguished Persons: with Vertue's and Houbraken's engraved portraits.* 1752, 2 vols. fol.

80.—*Portraits of Illustrious Personages of Great Britain; with Biographical and Historical Memoirs of their Lives and Actions.* By Edm. Lodge, *Lancaster Herald*, FSA. 4to.

A republication of this work, with new engravings of the portraits (in imperial octavo), and a continuation to the close of the last century, has been lately announced.

81.—Horace Walpole's (Lord Orford) *Catalogue of Royal and Noble Authors of England, Scotland, and Ireland, with Lists of their Works.* New edit. with improvements by T. Park, FSA. 1806, 5 vols. 8vo. First published in 1759, 2 vols. 12mo.

82.—H. Walpole's *Anecdotes of Painting in England; with a Catalogue of Engravers.* New edit. by the Rev James Dallaway, FSA. 1827, 5 vols. 8vo. First edit. 1762.

83.—Rev Matt. Pilkington's *Dictionary of Painters; with considerable alterations, additions, appendix, and an index,* by Henry Fuseli. 1810, 4to.

84.—Mich. Bryan's *Biographical Dictionary of Painters and Engravers, from the Revival of Painting, and the alleged Discovery of Engraving by Finiguerra.* 1816, 3 vols. 4to.

85.—E. Edwards's *Anecdotes of Painters who have Resided or been Born in England, intended as a Continuation of Walpole's Anecdotes of Painting.* 1806, 4to.

86.—W. Young Ottley's *Inquiry into the Origin and Early History of Engraving upon Copper and Wood, with an Account of Engravers and their Works.* 1816, 2 vols. 4to.

This work is splendidly illustrated with copperplate and wood engravings.

ENGLISH WORKS ON BIOGRAPHY.

87.—Joseph Strutt's *Biographical Dictionary of Engravers*. 1785, 2 vols. 4to.

88.—Tho. Dodd's *Connoisseur's Repertory*; or a *Biographical History of Painters, Engravers, Sculptors, and Architects*, with an Account of their Works, from the Revival of the Fine Arts in the Twelfth Century to the End of the Eighteenth; accompanied by Tables of their Marks, &c. 1824—28, 8vo.

89.—William Seward's *Anecdotes of Distinguished Persons*. 1795, 4 vols. 8vo.

90.—W. Seward's *Biographiana*. 1799, 3 vols. 8vo.

Mr Seward's publications relate chiefly to individuals who lived in the sixteenth and seventeenth centuries.

91.—J. D'Israeli's *Curiosities of Literature*. 4 vols. 8vo.

The third and fourth volumes are recent additions to this amusing compilation, which was originally confined to a single volume.

92.—J. D'Israeli's *Calamities of Authors*. 2 vols. 8vo.

93.—J. D'Israeli's *Quarrels of Authors*; or some *Memoirs for our Literary History*. 3 vols. 8vo.

For the idea of this work Mr D'Israeli was probably indebted to an ingenious French publication, entitled *Querelles Littéraires, depuis Homère jusqu'à nos Jours*, Paris, 1761, 4 vols. 12mo, ascribed to the abbé Tril, and also to Raynal and to Voltaire.

94.—J. D'Israeli's *History of Men of Genius*, drawn from their own feelings and confessions. Fourth edit. 1827, 2 vols. 8vo.

95.—A *Dictionary of Musicians*, comprising the most important *Biographical Contents* of the Works of Gerber, Fayolle, Count Orloff, Sir John Hawkins, and Dr Burney; with *Original Memoirs* of eminent living Musicians. 1824, 2 vols. 8vo.

96.—Dr Charles Burney's *State of Music in Germany and the Netherlands*. 1775, 2 vols. 8vo.

97.—Dr C. Burney's *History of Music from the Earliest Ages*. 1776—89, 4 vols. 4to.

98.—Dr John Freind's *History of Physic*, from the time of Galen to the beginning of the Sixteenth Century, in a Discourse written to Dr Mead. 1725-26, 2 vols. 8vo.

A Latin translation of this History, by Dr Wiggan, was printed in 1734, 2 vols. 12mo; and it was twice translated into French.

99.—Dr John Aikin's *Biographical Memoirs of Medicine*. 1780, 8vo.

100.—Benj. Hutchinson's *Biographia Medica*, or *Historical and Critical Memoirs* of the Lives and Writings of the most eminent Medical Characters, from the earliest account of time to the present period. 1799, 2 vols. 8vo.

101.—D. E. Baker's *Biographia Dramatica*, or *Companion to the Playhouse*. New edition, enlarged by Isaac Reed and Stephen Jones, 1812, 4 vols. 8vo.

102.—John Nichols's *Literary Anecdotes of the Eighteenth Century*, comprising *Biographical Memoirs* of Bowyer the Printer, and many of his learned Friends; with indexes. 1812—15, 10 vols. 8vo.

103.—J. Nichols's *Illustrations of the Literature of the Eighteenth Century*. 8vo. Vol. I—V.

This work, designed as a Supplement to the preceding, is not yet completed.

104.—Dav. Irving's *Lives of the Scottish Poets*. Edinb. 1804, 2 vols. 8vo.

105.—Thomas Warton's *History of English Poetry*. 1774, 3 vols. 4to.

Of this very elaborate and valuable, but imperfect work, a new edition has been published in 4 vols. 8vo.

106.—Dr Samuel Johnson's *Lives of the Poets*. 4 vols. 8vo.

FRENCH WORKS ON BIOGRAPHY.

107.—Theoph. Cibber's *Lives of the Poets of Great Britain and Ireland*. 1753, 5 vols. 12mo.

Robert Shiells, an amanuensis of Dr Johnson, is said to have been the real compiler of these *Mémoires*; but the materials were principally collected by Mr Thomas Coxeter.

108.—Dr Wm. Nicolson's *English, Scottish, and Irish Historical Libraries*. 1736, fol.

These treatises, which relate rather to Bibliography and Criticism than to Biography, were first published in 5 vols. 8vo, during the life of the author, who died in 1727.

109.—Rev Joseph Berington's *Literary History of the Middle Ages*, comprehending an Account of the State of Learning from the close of the Reign of Augustus to its Revival in the Fifteenth Century. 1814, 4to.

110.—Dr John Ward's *Lives of the Professors of Greaham College*. 1740, folio.

111.—Rev Christopher Wordsworth's *Ecclesiastical Biography*. 1818, 6 vols. 8vo.

This is a collective republication of Sir G. Paule's *Life of Archbishop Whitgift*, and other *Memoirs of English Divines of the Sixteenth and Seventeenth Centuries*.

112.—George Ballard's *Memoirs of Ladies of Great Britain, eminent for Learning or Abilities*. Oxford, 1752, 4to, repr. in 8vo.

113.—*Annual Biography and Obituary*, 1816—28. 12 vols, 8vo, published periodically.

114.—*Autobiography*; a collection of most instructive and amusing *Lives*, written by the Parties themselves. 18mo.

Twenty volumes of these autobiographical memoirs have already been printed, including some interesting pieces translated from the French and other languages, together with some English works which have never before been published in so compendious a form. Introductions and Sequels have been added, where necessary, to the original memoirs.

115.—Bouterweck's *History of Spanish and Portuguese Literature*, translated from the German by Thomasine Ross. 2 vols. 8vo.

116.—Benj. Martin's *Biographia Philosophica*; an Account of the *Lives, Writings, and Inventions of the most eminent Philosophers and Mathematicians*. 1764, 8vo.

117.—Louis Moreri *Grand Dictionnaire Historique*: nouv. édit. revue par l'Abbé Goujon, et augmentée par Drouet. Paris, 1759, 10 vols. fol.

This is the latest and most complete edition of this immense magazine of Genealogy, Biography, and General History.

118.—Pierre Bayle *Dictionnaire Historique et Critique*. Rotterdam, 1720, 4 vols. fol.

This edition of Bayle's Dictionary was regarded as the most valuable, on account of its containing a *Life of David*, which was cancelled after the work was printed, and is wanting in some copies. The work was republished, with some improvements, in 4 vols. fol. Amsterdam, 1740; but all preceding impressions are superseded by that of M. Beuchot, with numerous notes, Paris, 1821, 16 vols. 8vo. An English translation of Bayle's Dictionary, by Peter Desmaizeaux, appeared in 1734, 4 vols. folio; and an Abridgment of the work, by the author of this Dictionary, was published in 1826, 4 vols. 12mo.

119.—Jac. Geo. de Chauffepie *Nouveau Dictionnaire Historique et Critique, pour servir de suite au Dictionnaire de Bayle*. Amst. 1750, 4 vols. fol.

120.—Prosp. Marchand *Dictionnaire Historique de la République des Lettres*. La Haye, 1758, fol.

121.—J. P. Nicéron *Mémoires pour servir à l'Histoire des Hommes Illustres dans la République des Lettres, avec une Catalogue Raisonnée de leurs Ouvrages*. Paris, 1729—45, 43 vols. small 8vo.

122.—Ant. Teissier *Elogés des Hommes Savans, tirez de l'Histoire de M. de Thou, avec des Additions, contenant l'Abrégé de leur Vie, le Jugement et le Catalogue de leurs Ouvrages*. Leyd. 1715, 4 vols. 12mo

FRENCH WORKS ON BIOGRAPHY.

123.—Fr. Grudé de la Croix du Maine Bibliothèque Française. 1584, 2 vols. fol.

A new edition of this work, with the Dictionary of Duverdier, was published by Rigoley de Juigny, with historical, bibliographical, and critical remarks by La Monnoye, Bouhier, and Falconet, Paris, 1772, 6 vols. 4to.

124.—C. P. Goujet Bibliothèque Française, ou Histoire de la Littérature Française, avec des Jugemens Critiques sur chaque Ouvrage. Paris, 1741, 18 vols. 12mo.

125.—N. Desessarts Siècles Littéraires de la France; ou Dictionnaire Historique, Critique, et Bibliographique de tous les Ecrivains François morts et vivans jusqu'au, 18me siècle. Paris, 1800, 7 vols. 8vo.

126.—D. F. Camusat Histoire Critique des Journaux. Amst. 1734, 2 vols. 12mo.

This work, which comprises much biographical intelligence, relates to the history of the French journals only.

127.—F. X. Feller Dictionnaire Historique, ou Histoire Abrégée des Hommes qui se sont fait un nom par leur génie, talens, vertus, erreurs, &c. Liege, 1797, 8 vols. 8vo.

A new edition of this work, much enlarged, is now in course of publication.

128.—Dictionnaire Universelle Historique, Critique, et Bibliographique, par MM. Bro-tier, Mercier de St Léger, Chaudon et Delandine. 9me édit. Paris, 1810, 18 vols. 8vo.

129.—Biographie Universelle, Ancienne et Moderne; ou Histoire par Ordre Alpha-bétique, de la Vie Publique et Privée de tous les Hommes qui se sont fait remarquer par leurs écrits, leurs actions, leurs talens, leurs vertus, ou leur crimes. Vols. I.—LI.

The fifty-first volume of this work, published in the course of the present year (1828), extends to the end of the letter Y; and the next volume will therefore probably complete the alphabet. This Dictionary possesses unrivalled value with reference to the extent and variety of information which it affords. Among the contributors to the undertaking were MM. Biot, Malte-Brun, Boissonade, Lally-Tollendal, Langlés, De Sacy, Tabarand, Sismondi, Suard, Villemain, Walckenaer, and Visconti.

130.—Biographie Nouvelle des Contemporains, ou Dictionnaire Historique et Rai-sonnée de tous les Hommes qui depuis la Révolution Française ont acquis de la célébrité, par leurs actions, leurs écrits, leurs erreurs, ou leurs crimes, soit en France soit dans les pays Etrangers, par MM. A. V. Arnault, A. Jay, E. Jouy, J. Norvins, &c. Paris, 1820—25. 20 vols. 8vo.

131.—Dictionnaire Biographique et Historique des Hommes Marquans de la Fin du 18me siècle, et plus particulièrement de ceux qui ont figuré dans la Révolution Française; rédigé par une Société de Gens de Lettres. Londres, 1800, 3 vols. 8vo.

Though the word "Londres" appears in the title-pages of these volumes, they were certainly printed abroad—probably at Paris.

132.—Biographie Moderne, ou Dictionnaire Biographique des Hommes morts et vivans, qui ont marqué dans les 18me et 19me siècles, par leurs écrits, leurs talens, &c. Breslau, 1807, 4 vols. 8vo.

An English translation of this work was published in 3 vols. 8vo.

133.—Annuaire Nécrologique, 1820—25. 6 vols. 8vo.

134.—Annales Biographiques, ou Complément Annuel et Continuation de toutes les Biographies ou Dictionnaires Historiques; contenant la Vie de toutes les Personnes Ré-marquables en tous Genres, mortes dans le cours de chaque année. Vol. 1. Paris, 1827.

This is a periodical work, designed as a continuation of the preceding.

135.—Charles Perrault Hommes Illustres qui ont paru en France pendant ce siècle (17e), avec leurs portraits au naturel. Paris, 1696—1701, 2 vols. folio.

An English translation of this work, by John Ozell, was published, without the portraits, under the title of "Characters, Historical and Panegyric, of the Greatest Men that have appeared in France during the last Century." 1704—5, 2 vols. 8vo.

ITALIAN WORKS ON BIOGRAPHY.

136.—André Felibien *Entrétiens sur les Vies des Peintres*. Paris, 1685, 2 vols. 4to, reprinted at Trevoux, 1725, 6 vols. 12mo.

137.—A. Felibien *Vies des plus célèbres Architectes*. Paris, 1687, 4to.

138.—P. L. Ginguené *Histoire Littéraire d'Italie*. Paris, 1824, 9 vols. 8vo.

139.—Simonde de Sismondi *Histoire de la Littérature du Midi de l'Europe*. 1813, 4 vols. 8vo.

Part of this work has been translated by Mr T. Roscoe.

140.—Barth. D'Herbelot *Bibliothèque Orientale*, contenant tout ce qui fait connoître les Peuples de l'Orient, &c. La Haye, 1777, 4 vols. 4to.

141.—Suite de *Bibliothèque Orientale*, par MM. Galland et Visdelou. La Haye, 1779, 4 o.

142.—*Dictionnaire Historique, ou Biographie Universelle Classique*; ouvrage entièrement neuf, par M. le Général Beauvais, révisé et augmentée pour la partie bibliographique, par M. Barbier, sen. et M. Louis Barbier. 8vo.

143.—*Biographie Universelle et Portative des Contemporains, ou Dictionnaire Historique des Hommes célèbres de toutes les Nations, morts et vivans*. 8vo.

The two preceding works are unfinished.

144.—J. Etienne Montucla *Histoire des Mathématiques*. 1799—1802, 4 vols. 4to.

First published in two volumes, 1758.

145.—J. Sylvain Bailly *Histoire de l'Astronomie Ancienne, depuis son Origine jusqu'à l'Etablissement de l'Astronomie Moderne*. 1775, 4to.

146.—J. S. Bailly *Histoire de l'Astronomie Moderne*. 1778—83, 4to.

147.—J. S. Bailly *Histoire de l'Astronomie Indienne*. 1787, 4to.

An abridgment of these three works, forming a *General History of Astronomy*, was published at Paris, 1805, 2 vols. 8vo.

148.—Delambre *Histoire de l'Astronomie au 18me siècle*. Paris, 1827, 4to.

149.—L. E. Dupin *Bibliothèque des Auteurs Ecclesiastiques*, contenant l'Histoire de leur vie, le catalogue, la critique, la chronologie de leurs ouvrages. Paris, 58 vols. 8vo. reprinted in Holland in 19 vols. 4to.

A Supplement to this work was published by the Abbé Goujet, under the title of "*Bibliothèque des Ecrivains Ecclesiastiques*," Paris, 1736, 3 vols. 8vo.

150.—Dan. Leclerc *Histoire de la Médecine*. Genev. 1696, 8vo.; repr. 1723, 4to.

An English translation of this History, by Dr Drake and others, was published at the beginning of the last century.

151.—Girol. Tiraboschi *Storia della Letteratura Italiana*. Roma, 1782, 12 vols. 4to; reprinted at Venice in 1795, 16 vols. 8vo, and at Florence in 1805, 15 vols. 8vo.

152.—A. Lombardi *Storia della Letteratura Italiana*, in continuazione al Tiraboschi. Vol. I. II. Modena, 1826, 8vo.

153.—*Della Letteratura Italiana nella seconda metà del secolo XVIII*. Opera di Camillo Ugoni. Brescia, 1822, 3 vols. 12mo.

154.—G. Vasari *Vite de' Pittori, Scultori, ed Architetti*, colle Giunte del Padre della Valle. Sienna, 1791, 11 vols. 8vo; id. op. Milan, 1808—11, 16 vols. 8vo.

155.—Luigi Lanzi *Storia Pittorica della Italia, dal Risorgimento delle Belle Arte fin presso al fine del XVIII secolo*. Milan, 7 vols.

An English translation of this work has been published by Mr Thos. Roscoe.

156.—Milizia *Vite dei Architetti*. 2 vols. 4to.

This work has been translated into English, and published with additions, by Mrs Cressy, 2 vols. 8vo.

GERMAN WORKS ON BIOGRAPHY.

157.—Giov. Baglione Vite dei Pittori, Scultori ed Architetti. Roma, 1642, 4to.

158.—P. Orlandi Abecedario Pittorico de Professori piu illustri in Pittura, Scultura, ed Architettura. Venice, 1753, 4to.

There is an English translation of this work.

159.—Giov. Mar. Crescimbeni Istoria della Volgar Poesia. Roma, 1690, 4to; repr. Venice, 1758.

160.—G. M. Crescimbeni Vite de' piu celebri Poeti Provenzali, tradotte dal Francese, ornate di copiosa annotazione, e accresciute di moltissimi Poeti. Roma, 1722, 4to.

This is the second edition of the work: the first was left incomplete.

161.—G. M. Crescimbeni Vite degli Arcadi illustri. Roma, 1708—27, 4to.

162.—Toderini Letteratura Turchesca. Venice, 1787, 3 vols. 8vo.

163.—De Rossi Dizionario Storico degli Autori Ebraici e delle loro Opere. Parma, 1802, 2 vols. 8vo.

164.—Andres dell' Origine, Progressi, e dello Stato attuale d'ogni Letteratura. Parma, 1782, 7 vols. 4to; repr. Venez. 1800, 22 vols. 8vo.

Don Juan Andres, who was a Spanish jesuit, also published this work in his native language at Madrid, 1784, 8 vols. 4to.

165.—Memorie degli Scrittori e Letterati Parmegiani. Parma, 6 vols. 4to.

Father Ireneo Affo, keeper of the public library at Parma, published the first five volumes of these Memoirs; and the sixth volume in continuation was published by his successor, F. Pezzana, in 1825.

166.—C. G. Joecher Allgemeines Gelehrtes Lexicon, mit J. C. Adelung und H. W. Roethermunds Fortsetzung. Leipzig und Bremen, 1750—1818, 9 vols. 4to.

167.—K. H. Joerdens Lexicon Deutscher Dichter und Prosaisten, enthaltend kurze Biographien der Schriftsteller. Leipzig, 1806—11, 6 vols. 8vo.

168.—F. C. G. Hirsching Historisch Litterarische Handbuch berühmter und denkwürdiger Personen welche in den 18ten Jahr hundert gestorben sind, mit J. H. M. Ernestis Fortsetzung. Cobourg, 1794—1813, 17 vols. 8vo.

169.—Nekrolog enthaltend Nachrichten von den Leben merkwürdiger in diesem Jahre Gesammelt von Fried. Schlichtegroll, für das Jahr 1791 bis 1794. Gotha, 1792, &c. 8 vols. 4to.

This work, which consists of a collection of eulogies rather than biographical memoirs, was continued till 1806, forming thirty-four volumes.

170.—F. Bouterweck Geschichte der Poesie und Beredsamkeit seit dem ende des achtzehnten Jahrhunderts. Gott. 1801—16, 10 vols. 8vo.—See No. 115.

171.—J. G. Eichhorn Geschichte der Litteratur von ihren Anfänge an bis auf die neuesten Zeiten. Gott. 1805—12, 11 vols. 8vo.

172.—J. G. Meusel Gelehrtes Deutschland, oder Lexicon der jetzt lebenden Deutschen Schriftsteller. Lemgo, 1787-88, 6 vols. 8vo.

173.—J. S. Asemanni Orientalische Bibliothek, oder Nachrichten von Syrischen Schriftstellern. Erlangen, 1776, 2 vols. 8vo.

174.—Neuer Nekrolog der Deutschen. Ilmenau, 12mo.

This is a periodical work, the last two volumes of which, containing notices of 288 persons, chiefly natives of Germany, who died in 1826, were published in the beginning of 1828. The publication commenced with the year 1823.

A

CHRONOLOGICAL TABLE

OF

REMARKABLE EVENTS

IN THE HISTORY OF THE HUMAN RACE,

WITH A CORRESPONDING

Catalogue of Eminent Men,

WHO HAVE FLOURISHED

FROM THE EARLIEST AGES OF AUTHENTIC RECORD

TO THE PRESENT TIME.

PRELIMINARY OBSERVATIONS.

IN the arrangement of the materials of History according to the order of time, some fixed period for the commencement of calculations must be adopted. Throughout the greater part of the civilized world at present the birth of Christ is regarded as a grand epoch, or beginning of an æra, whence computations are made; and in reference to which all other occurrences, whether anterior or posterior, may be registered. From the commencement of the Christian æra to the present time have elapsed 1828 years; and, according to the most commonly received opinion, the creation of the world took place 4004 years before the first year of that æra. The date of the *creation* (marked AM.—*anno mundi*), and that of the *birth of Christ* (AD.—*anno Domini*), are almost exclusively used by modern chronologers. But ancient writers, and some entire nations both in ancient and modern times, have employed different æras in their public or private records and transactions. The Greeks in general reckoned their time by *Olympiads*, which were periods of four years, commencing not from the original institution of the Olympic games, but from the celebration of those games 776 BC., which accordingly is to be considered as corresponding with the first year of the first Olympiad. Some Oriental nations used the *æra of Nabonassar*, computed from the reign of a king of Babylon, and commencing 747 BC. The Asiatic Greeks, subsequently to the age of Alexander the Great, adopted the *æra of the Seleucida*, beginning 312 BC., when Seleucus, king of Syria, took the city of Babylon, and made it the seat of his government. The ancient Romans dated events from the *building of Rome*, in the year 753 BC. The only æra in modern chronology which requires particular notice is the *hegira*, used by the Turks and other Mahometan nations: it commences

AD. 622, being the year of the flight of Mahomet from Mecca, and derives its appellation from that event, the Arabic word *hedgera* or *hegira* signifying *flight*.

As the Christian epoch is a fixed point whence computations may be made in an ascending or descending course, and as its general adoption renders this æra a convenient common measure and object of comparison for others, it is proper to show how a date, in any other given æra, may be converted into the corresponding year of the Christian æra, or year before Christ. The æra of the creation may be reduced to the year BC. by subtracting any date in years since the creation from 4004, if the given date be less than that sum; but when the given date exceeds that sum, 4004 must be subtracted from it and the remainder will be the year of the Christian æra. When a date is given in Olympiads, it must be multiplied by four, to reduce it to years, adding to the product any number of years which may be specified between one Olympiad and another. The number of years thus obtained being subtracted from 776, will give the required date in years BC. Any number of years reckoned from the æra of Nabonassar may be reduced to the corresponding date BC. by subtracting it from 747. The æra of the Seleucidæ may be made to correspond with that of Christ by subtracting the number of years according to the æra of Seleucus from 312, which will give the number of years before Christ; or, should the date exceed 312, that number must be subtracted from the given number, and the remainder will be the years after Christ. Any date from the building of Rome, if specifying a number of years less than 753, must be subtracted from that sum to obtain the years BC.; and when the date is a greater number of years than 753, that sum must be taken from it to discover the number of years after Christ. The Mahometan hegira may be reduced to the Christian æra by adding 622 to any date as expressed in years of the hegira.

It is proper to observe, that these rules are merely intended as directions for making general comparisons between different æras; for as both the length and the commencement of the year varied materially among ancient nations, especially before the reformation of the calendar by Julius Cæsar, it is obvious that more minute calculations than those proposed would be required to ascertain accurately the correspondence of dates according to different æras.—See *Robison's Elements of Mechanical Philosophy*, vol. i. Astronomy, pp. 204—220.

A

CHRONOLOGICAL TABLE.

SUCCESSION OF SOVEREIGNS.	BC.	EVENTS.	EMINENT MEN.
	2348	General Deluge	
	2247	Building of the Tower of Babel ; confusion of tongues ; and dispersion of mankind	Nimrod
	2234	Alleged date of the earliest astronomical observations, made by the Chaldeans at Babylon	Belus
	2188	Foundation of the kingdom of Egypt, under Menes, supposed to be the Misraim of Scripture
